W. G. Cordiner of Walla Walla, Wash., exhibited his show herd of Shorthorns at Union, Ore.; Walla Walla and Yakima, Wash., and Salem, Ore., this year, securing a fair share of the prizes at each place. At Union he received nine firsts, three seconds and two thirds. His white bull calf, Captain Radium, was junior champion at Walla Walla. Mr. Cordiner's herd sire, Hedgewood Hopeful, is by Rosewood Radium. He was bred by W. A. Forsyth & Son of Missouri. The bull is deep fleshed, has a fine, silky hide, is long bodied and has a typical Shorthorn head. A number of big matronly cows make up the breeding herd, all of straight Scotch breeding except two. Mr. Cordiner has three yearling heifers and three senior calves by Rosewood Radium and they constitute an excellent lot of young stock. Owing to the recent death of his brother, Mr. Cordiner may decide to disperse his entire herd.

Breeders' Department

Dispersal Sale of Registered Holsteins

consisting of 51 head of richly bred cows, heifers and bulls. Seven bulls, including my herd sire, from a 31-pound granddaughter of King Segis Pontiac Alcastra. The females include a daughter of Judge Segis, with a fine heifer calf, a valuable addition to any Holstein herd in the west. There are a number of fine females from dams with records up to 39 pounds. All young and in prime condition. Only two of the females are over three years old.

The entire herd is tuberculosis tested and sold on a 60-day retest. The best lot of Holsteins offered in Idaho in years. A rare opportunity to get foundation stock or improve your herd.

Sale will be held at my farm one-half mile east of the fairgrounds.

Filer, Idaho, November 21

Beginning promptly at 1 o'clock. Terms will be given. Kindly bring bank references. Send mail bids to A. L. Madland, clerk of sale, care of Earl O. Walter, Filer, Idaho.

JOHN KAESER, Owner,

COL. E. O. WALTER,
COL. RAY L. SHEARER,
Auctioneers.

Big Type Poland Chinas

100 head for sale. A fine lot of sows and gilts, either bred or open. Also a number of choice young boars, ready for service. A lot of fall pigs. These are all of the big litter kind. Everything priced to sell. Write your wants and for prices.

P. L. SAIN, Oakesdale, Wash.

LET THE LITTLE FELLOWS PAY OFF YOUR MORTGAGE.
Silver Fox Ranches Make Big Profits.

Finest Quality Imported Prince Edward Island Stock.

All Pedigreed and Registered. Fully Guaranteed.

Full Particulars free. Write today.
United States Silver Fox Farms Corp.
200 Hutton Bldg. Spokane, Wash.

The Big Wonder Herd

of big type Poland Chinas, offers a few choice boars, ready for service; sired by such boars as the 1200-lb. Giant Buster and Saint Peter, a great son of Peter Pan. Satisfaction guaranteed on all orders.

E. O. LOE, Silverton, Ore.

Two Milking Shorthorn Bulls

One year old. Both from splendid dams and sired by the eastern bred bull Lord Ireby, who carries seventy-five per cent of the blood of the most approved imported families. These bulls will make real herd sires as they are richly bred as well as being exceptional individuals that carry plenty of beef. Price $200 each. Guaranteed.

ROGUE RIVER VALLEY CANAL COMPANY.
MEDFORD, ORE.

Poland China sow $100. Show her at your state fair. Ask Talmadge or Hubbard. Also 7 months boar and sow, $35 each.

HARVEY NORRIS, Goldendale, Wash.

Milking Shorthorns Cows and young bulls by Peerless Knight, by Beau of Glenside, carrying 93¾ per cent of champion milch cow, Rose of Glenside.

J. E. DANIELS, Murphy, Ore.

Stillings' Poland Chinas

Young boars and weaned pigs at farmers' prices, from prize winning stuff. My pigs please everywhere.

H. J. STILLINGS, Hermiston, Ore.

Milking Shorthorns We are offering some choice bulls and heifers at bargain prices. Over 70 head in our herd, all registered.

HIGHWAY DAIRY.
LEWISTON OR LAPWAI, IDAHO.

Poland China Boars of March farrow, sired by Designer's Model, Checkers Son and Smooth Giant, all large for age and in good condition. $50 each. Only ten left.

B. F. KAMMERZELL & SONS
R. 5, COLFAX, WASH.

Holstein Bargains

To make room for daughters of my herd sire, I offer at bargain prices from my federal accredited herd: One bred A. R. O. cow, two bred registered heifers, one bred high grade heifer. I also offer one typy bull almost ready for service and two baby bulls. Inquiries promptly answered.

OSCAR DUNLAP, Junction City, Ore.

Big Buster Polands Real bargains in August pigs. Eight sows have farrowed 80 pigs and are raising 66. Write for prices and breeding.

FRED D. ENTERMILLE, Baker, Ore.

3 Young Jersey Cows $500

2 Golden Glow's Chief blood lines. All have good private records. Could give part time. A few young bulls of Golden Glow's Chief and Hood Farm breeding.

HOMER M. CARNES, North Powder, Ore.

8 Big-Type Duroc Boars

Three sired by Royal Marker and out of High Orion 2d dam; five sired by a son of Joe Orion and out of a Great Orion Sensation dam. These are the pick of 52 head of extra choice pigs from our 1922 litters, every one a grand individual and good herd header. No better boars anywhere. Last spring's pigs weigh 260 each. Prices reasonable.

D. W. BLANKSMA, Rt. 1, Nampa, Idaho.

Jersey--Gold and Silver Medal Sire

Ashnook Farm offers a few heifers and young bulls, sired by the gold and silver medal sire, Silver Chimes, of S. B., sire of ex-world champion heifer, Silver Chimes Gwendola, and 20 register of merit daughters, and more qualifying.

DEL PERKINS, Carlton, Ore.

DUROCS

$45 express prepaid. Duroc boars, real herd sires. Sire and dam from the best Big Type Sensations. Sold on "money back" guarantee.

GARFIELD STOCK FARM, Garfield, Wash.

Jersey Bulls at Bargain Prices

Send today for our special sale list of registered Jersey bulls from R. of M. dams. Easy terms, liberal credit.

WARREN GRAY, Box T, Jefferson, Ore.

Champion Durocs

Weanling pigs, Sept. farrow, sired by Red King Giant, grand champion 1922 Oregon state fair. All out of Pathfinder sows.

March gilts by Red King Giant, bred for March litters, to son of Pathmaster.

H. C. COMPTON, Boring, Ore.

Silver Medal Jerseys

Young bulls out of heifers qualifying for silver medals with first calf, and will make their sire a silver medal bull.

JOHN KOPPLIN, Gaston, Ore.

Cornell's Duroc sows were undefeated on show circuit. Choice lot of bred gilts priced to sell. Satisfaction guaranteed.

S. D. CORNELL, Grandview, Wash.

Guernsey breeding stock. Buy your foundation stock from herd continually doing advanced registry testing. Prices reasonable. Everything sold under a guarantee.

FOSHAY FARM, Hubbard, Ore.
O. & M. L. VOGET.

Durocs Am offering to the trade a choice lot of open and bred gilts. Pathfinder, Great Wonder and Sensation breeding. Orders booked for fall pigs. Satisfaction guaranteed.

F. D. GANO, Sunnyside, Wash.

Brown Swiss Stock Farm

Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.

THEO BRUGGER, Route 3, Gresham, Ore.

Indian City Berkshires

We offer for sale big growthy pigs. Tops of fall farrow, sired by our grand champion boar "Matchless Lee's Royal."

If Berkshires are your choice we want you to have them at pork producer's prices.

DR. W. J. KEYES, Spokane, Wash.
B. F. WATSON, Mgr., Chester, Wash.

MILCH GOATS

Does for sale on installment plan. The milk they give soon pays for them and you own the doe.

FAIRMOUNT GOAT DAIRY, Eugene, Ore.

River Banks Berkshires

Long, smooth, deep, grand champion kind. Strong in the blood of most popular families of nation.

RIVER BANKS FARMS, Grants Pass, Ore.

The Pacific International Show

Last week's issue contained the major report of the Pacific International Live Stock show at Portland. The following divisions were omitted owing to lack of space:

THE SWINE SHOW.

The swine show, while not equal in numbers to the great show of a year ago, was the best for breed type and all around quality the exposition has ever had, and probably the best that has even been assembled in the west. The fact that there were just a few empty pens, instead of an overcrowded barn, made the show much easier for visitors to see and far easier for exhibitors to get to and from the show ring. High quality was predominant in every breed shown and the most encouraging thing about the exhibit was the fact that there was scarcely a poor pig in the show. Champions from other shows gathered and competed, occasionally being defeated by new or unknown entries, but always competition was close and keen and the show was often spectacular in the great number of outstanding show animals

Duroc Jerseys.

Duroc Jerseys were second only to the Poland Chinas in numbers, and their average quality was almost if not quite as high. Oregon breeders, who were conspicuous by their absence last year, were well represented and, while they had competition from California and Idaho, they gave a good account of themselves. The sensational feature of the show was the winning of five of the six champions, two of them grand champions, by H. C. Compton of Boring, Ore. The fact that one boar and his offspring were the winners made the win still more sensational. This was the senior yearling, Red King Giant, that was senior and grand champion, and his son and daughter, junior champions, the latter grand champion as well. The senior champion sow, Wonder Madge, owned by J. E. Thorpe of Lockeford, Cal., is a great animal, with length of body, good feet and back. She had defeated the great sow, shown by Thousand Springs farm of Wendell, Idaho, as well as others, and some bystanders, without in any way criticising the great quality of the younger sow, would have given Madge premier honors.

Judge: W. L. McNutt, Ord, Neb.

Boars: Aged boar—1, Frank T. Busch, Johnson, Wash., on Busch's Royal Pathfinder; 2, J. E. Thorpe, Lockeford, Calif., on Prince You'll Do; 3, A. J. Hall, Troutdale, Ore., on Sensation I Am. Senior yearling—1, H. C. Compton, Boring, Ore., on Red King Giant (senior and grand champion); 2, Thorpe on King Sensation. Junior yearling—1, Thorpe, on Diamond Bar Sensation; 2, Thousand Springs Farm, Wendell, Idaho, on Sensation's Island King; 3, Busch on Idaho Pathmarker; 4, Oregon Agricultural college on Ona's Orion. Senior pig—1, L. S. Berry, Gaston, Ore., on Sheik Alhammed; 2, Thorpe, on Happy Sensation Lad; 3, Thousand Springs farm, on Sensation High Boy. Junior pig—1, Compton, on Red King Junior (junior champion); 2 and 5, Busch, on Skcokum Pathfinder and Hama Pathfinder; 3, Thorpe, on King You'll Do; 4 and 6, Thousand Springs farm, on Sensation Gay Lad and Sensation Sampson.

Sows: Aged sow—1, Thorpe, on Wonder Sensation Girl; 2, Thousand Springs farm, on Queen Mammoth Sensation; 3, Oregon Agricultural college, on Lucille's Ona. Senior yearling—1, Thorpe, on Diamond's Sensation Lady; 2, Thousand Springs farm, on Belle Wonder Sensation. Junior yearling—1, Thorpe on Wonder Madge 3d (senior champion); 2 and 4, Thousand Springs farm, on Sensation's Orion Lady 1st and Island Sensation Maxine; 3, Oregon Agricultural college, on Ona's Sister; 5 and 6, Busch on Woodland's Model 1st and Woodland's Model 2d. Senior pig—1 and 3, Thousand Springs farm, on Island Lady Sensation and Island Belle Sensation; 2, Thorpe, on Pathfinder Wonder Girl 7th; 4 and 6, Busch on Sunset 1st and Sunset 2d; 5, Oregon Agricultural college on Lassie Sensation. Junior pig—1, 2 and 3, Compton, on Junie (junior and grand champion), and unnamed pigs; 4, Thousand Springs farm, on unnamed pig; 5 and 6, Thorpe, on Sensation Miss of Mossdale and Miss Sensation Again of Mossdale.

Aged herd—1, Thousand Springs farm; 2, Thorpe; 3, Busch. Young herd—1, Compton; 2 and 5, Thousand Springs farm; 3 and 6, Busch; 4, Thorpe. Young herd bred by exhibitor—1, Compton; 2 and 5, Thousand Springs farm; 3 and 6, Busch; 4, Thorpe. Get of sire—1, Compton; 2 and 6, Thousand Springs farm; 3 and 5, Busch; 4, Thorpe. Produce of sow—1 and 3, Busch; 2, Thorpe; 4 and 5, Thousand Springs farm.

Chester Whites.

Chester Whites had a number of small exhibitors, including more club boys than any other breed, but their quality suffered little, if any, thereby. In fact, a club boy, J. W. Raynard from Laurel, Ore., had the junior champion boar in Midway Wonder, a splendid, growthy junior pig. The great big type boar, Oregon Buster, owned by Cass A. Nichols of Salem, Ore., that lost to a boar of more compact type at the Western Royal, was given grand championship at Portland. He is a very perfect specimen of the big type. Nichols had the junior champion sow, also. The senior and grand champion sow, Sadie, a mature sow of great depth of body, good back and up on her feet, was shown by C. F. Sargent of Scio.

Judge: E. H. Hughes, University of California.

Boars: Aged boar—1, Cass A. Nichols, Salem, Ore., on Oregon's Buster (senior and grand champion); 2, Ed Scholl, Albany, Ore., on Iowa Lad; 3, C. F. Sargeant, Scio, Ore., on Galloway Giant. Junior yearling: 1, Sargeant on Woodrew the 16th. Senior pig—1, Nichols on King of Brookside; 2, Scholl on Chief Justice Junior; 3, Sargeant on unnamed pig. Junior pig—1, J. W. Raynard, Laurel, Ore., on Midway Wonder (junior champion); 2, Homer Bray, Salem, Ore., on Rolling Stone; 3, Nichols, on Brookside Monster; 4, Scholl on Prince; 5 and 6, Sargeant on Toney and Steve.

Sows: Aged sow—1 and 3, Nichols, on Model Maid and Chief's Snowball; 2, Scholl, on Oregon Queen; 4, Sargeant, on Snowball. Senior yearling—1 and 3, Sargeant, on Sadie (senior and grand champion) and Hazel; 2, Nichols on Marjorie B 3d. Junior yearling—1 and 2, Nichols on Miss Buster C and Billiken Betty; 3 and 4, Scholl on Benton Queen and Benton Pride; 5 and 6, Raynard on Midway Sue and Midway Pride. Senior pig—2, Scholl on Buster's Kind; 2 and 3, Nichols on Model B Rose and Model Maid Rose. Junior pig—1 and 2, Nichols on Brookside Beauty (junior champion) and Brookside Wonder; 3 and 4, Bray on Wild Nell and Betty Bunce; 5, Sargeant on Lassie; 6, Scholl on Bettie.

Aged herd—1 and 3, Nichols; 2, Scholl. Young herd—1 and 3, Nichols; 2, Bray; 4, Scholl; 5, Sargeant. Young herd bred by exhibitor—1, Nichols; 2, Scholl; 3, Sargeant. Get of sire—1 and 3, Nichols; 2, Bray; 4, Scholl; 5, Sargeant. Produce of sow—1 and 5, Nichols; 2, Bray; 3, Scholl; 4, Sargeant.

Berkshires.

No breed was superior to the Berkshires in either tops or average quality. The Italian Vineyards company of Guasti, Cal., with one of the recognized best herds in the United States, made the principal exhibit. They had all but one of the championships, Ashlane farm of Pleasant Grove, Utah, having junior champion boar. The senior and grand champion sow, Violet Festline, bred by the Oregon Agricultural college, has been shown 11 times without defeat. She has size, back, bone, and type and is said by good judges to be the

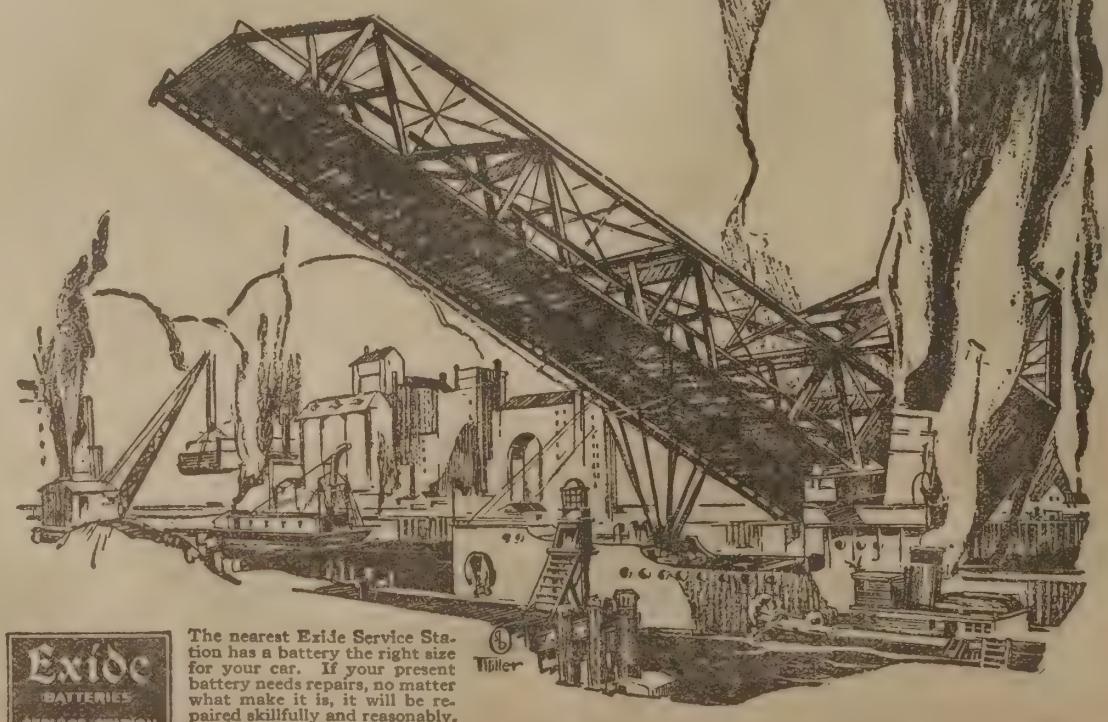
Exide
BATTERIES

When
the great bridge moves



At a touch of the hand the great cantilever lifts or the drawbridge swings so your ship may pass. The hand moves a switch, and the current from an Exide Battery sets in motion the motor that does the work. So also in railway signals, the Exide Battery says the word that speeds your train in safety.

There is an Exide Battery made for every purpose, from propelling mine locomotives under the ground to propelling submarines under the sea. A great majority of the thousands of electric light and power plants on farms get their current from Exide Batteries. It is wise to make sure that the battery in your plant is a rugged, long-lasting Exide.

The first successful starting and lighting battery for automobiles was an Exide, and more cars leave the factories today equipped with Exides than with any other battery. The Exide means something more to you even than the comfort of uninterrupted service in your car. It means dollars-and-cents economy, because an Exide Battery lasts so much longer.

Washington's Finest Fruits Meet at Seattle

By RALPH ERSKINE

Washington fruits, arrayed in their finest polish, were "at home" to the visiting public at the second annual Pacific Northwest Fruit exposition held at the Bell street terminal dock in Seattle, November 11 to 19. In prim and shining rows they stood waiting to be admired—ruddy-cheeked apples, luscious golden pears, purple and light clusters of grapes, and all manner of Washington seasonal fruit.

Queen Pippin, Miss Guendolyn Bowman of Charleston, Kitsap county, and her court of five "peaches," all chosen by a state-wide vote conducted by the Seattle Times, reigned over the affair in royal style.

There was an abundance of entertainment provided in addition to the educational and instructive features of the show. The home demonstration program conducted by four county home demonstration agents was exceptional, and was well attended. There were also a number of lectures by men of prominence in horticultural circles given in the assembly hall. The Seattle Chamber of Commerce cooperated with the exposition officials in staging the show and valuable assistance was also given by the Seattle women's clubs, which, in addition to other services, provided a hostess room for visiting women.

The exposition was held in the same location as last year, the Bell street terminal at the Port of Seattle, which made an ideal home for the show, though a little removed from the city center. While the general arrangement of the booths was similar to last year's plan, there was more uniformity and a neater appearance in this year's arrangement, due in great part to the supervision of Mrs. Winnie Braden, manager of the exposition, who had entire charge of the arrangement.

As one passed the main entrance he was impressed by an immense arbor with blossoms hanging a few feet above his head. The entire exhibit floor was thus covered with a canopy of salal and huckleberry, with lights hanging through here and there. Each booth was lighted with large lights on the corner posts. The plan gave a uniform effect and helped draw the attention to the center of interest, the fruit.

The single, five and ten box entries were arranged in a long block in the center of the main aisle near the entrance. The fruit was entered largely from the apple producing districts of eastern Washington, although there was other districts represented. Western Washington growers were more prominent in the plate exhibits at the farther end of the hall. Tray entries were not called for in this year's premium list.

All of the first section of the building was devoted to the community, individual and organization booths, while the commercial displays were set up at the other end. A large bandstand was built in the center of the main building and a dance floor put in at the extreme end of the hall. The concessions were given space on the lower floor.

Spokane Wins Sweepstakes.

The district exhibit from the Spokane valley won the sweepstakes prize. It was made up of 12 varieties of apples admirably displayed. No visitor passed the booth without stopping to admire the shining red and yellow beauties, arranged in a double tray exhibit, against a background of white. A miniature of Mount Spokane set in the center, with Miss Spokane pouring a horn of plenty down its snowy slopes, carried the thoughts of the visitors to the prosperous orchard district in the extreme eastern part of the state.

The Wenatchee district was second, the Greater Wenatchee Irrigation district third and White Salmon second. The Omak district won first for the largest number of first prizes won by individual exhibits, and thus wins for the second time the trophy given for this honor. The trophy will belong to Omak if the district wins at the 1923 show.

An interesting display of nonirrigated fruit was shown from the White Salmon district in Klickitat county. A solid block of tray apples brought out a play of colors by arranging the different varieties. To complete the exhibit there were some plates of apples, pears, quinces and nuts.

The Wenatchee district display was among the best decorated booths at the show. A tall pillar of canned fruit in glass jars was lighted from the center, giving a rich red and gold effect, which illuminated the two displays of tray apples on each side. A number of cards emphasized the district's new slogan, "Eat Wenatchee Apples."

The same county was again represented by a similar booth from "Greater Wenatchee Irrigation project," which showed the project proposed by the department of conservation and development of the reclamation division. Its display of tray apples, commercial and home canned fruits, as well as samples of dried products, were interesting to all who passed by.

First Prize for Individuals.

A very attractive booth was the one arranged by Huntington Johnston of the Johnston orchards in the Naches Heights district in the Yakima valley. The boxed apples were arranged in perpendicular rows with the varieties alternated so as to mingle the dark red and yellow colors. Plates of such fruits as pears, quinces, prunes, grapes and nuts helped to set off the display. A few samples of glace fruits were shown as the product of a new industry that Mr. Johnston is starting at the orchard. This exhibit won first prize for individual displays. Other individual booths were: First, Johnston orchards; second, R. T. Ried. For the cranberry display Pacific county won first and Grays Harbor second. Awards of merit were given to Kitsap county, Hanford community, Seattle schools, Skookum packers, the Chrysanthemum show, the Island Belle Grape association, Camp Fire Girls, Northwest Fruit exchange, A. A. Quaranberg, Jim Hill apples, and the Okanogan government project.

Grays Harbor county had a strikingly decorated booth of cranberries which were in boxes with a background of apple green and white decorations. There was also a cross section of a cranberry bog in which the vines were growing. Eleven different ways of cooking cranberries were shown in glass jars. The entire showing was put up by Robert Cowan, county agent, and Miss Mabel Webber, county home demonstration agent.

R. T. Reid had a splendid assortment of fruits from his farm at Bellevue. While the center of interest was with the Island Belle grapes, there were also some Vergennes and Delawares, both of which are light grapes, which added greatly to the color effect. The apples were also locally grown and showed what could be raised if given proper care.

The College Booth.

On the opposite side of the room the state college extension service had three booths, two of which were in the potato show and separate from the fruit exposition. The third, however, was a lesson in thinning apples. Branches of both thinned and unthinned trees were set up side by side, illustrating the difference of size obtained from thinning out the surplus fruit. In addition there was some miniature trellises showing how to train the loganberry, raspberry and the blackberry. Proper methods of pruning fruit trees was illustrated by pieces of limbs, some of which had been treated both right and some improperly. There was also some samples of bridge grafting.

An exhibit of different apple grades was shown in the fourth state college booth, which brought out the importance of selecting perfect and well colored apples. "It is by careful methods of grading and packing that the northwest has become famous all over the United States for its high quality of fruit," read a large sign in front of the extra fancy grades. Mr. Armstrong held a grading and packing demonstration in this booth twice each day.

In another section was a showing by the Island Belle Grape association. The perfection of these grapes was worthy of notice and there were also some grape cuttings, nursery stock and basket materials, all of which were advocated by the association.

A solid bank of bright red cranberries represented Pacific county. There were nearly 60 boxes of this holiday fruit from growers at Ilwaco and Long Beach, made up of two varieties, the McFarlane and the Howe. In the center was a miniature cranberry bog, which showed the fruit growing and lined off ready for picking. A large sign above the exhibit, "Pacific County Cranberries," was made of small cranberries and presented a pleasing effect.

The home economics department of the exposition, under the management of Miss Maud Wilson of the state college, had a display of home canned fruits from women's organizations in different parts of the state. The quality and type of these exhibits were said to be among the best showings of its kind ever exhibited in the state. The department called for both group and single entries.

A similar section was entered by the canning clubs from many parts of the state. Here also were some high quality products, some of which had won high honors at their local fairs in competition with products shown by their elders.

An interesting and educational feature of this department was the cooking demonstration held daily in the center of the section. A stove had been installed for preparing fruits and potatoes in many different ways. Miss Mabel Webber, home demonstration agent of Grays Harbor county, demonstrated cranberry cooking, while Miss Ruch Kennedy, in charge of the same work in Thurston county, produced a number of grape dishes. Potato varieties were shown, each cooked in three ways by Miss Edna Walker, home demonstration agent of King county. This work, however, was a part of the potato show. A canning demonstration was staged twice each day by the South Bay canning team of Thurston county. Miss Ruth Haydeen and Gladys Taylor, the members, held the state championship in canning work in 1920. The girls also made jellies, pectin and dried fruit and demonstrated the canning of fruits in tin.

A neat showing of Anjou pears was fitted by F. F. Miller of Bothell.

A novel display of fruits, canned goods, and nuts was put up by four Seattle people from the South End gardens, who had gathered the exhibits from their home gardens. Those who helped with the display were Mrs. S. Hillstrand, Mrs. C. E. Sullivan, Mr. and Mrs. Jim McPherson, all of the Rainier valley, a section of Seattle. The products shown were high class and showed that good fruit can often be produced in home yards as well as in commercial orchards.

In another booth there was a large collection of boxed apples from the Chelan-Manson district on Lake Chelan. Some excellent apples of many of the commercial varieties were shown and the blend of colors was handled effectively.

Grant county also had a booth with a collection of apples from Soap Lake, Grant

(Continued on page eight.)

Hold West Side Potato Show

Potato producers of the Western Washington Potato Growers' association from 10 western Washington counties staged their first annual potato show at Seattle in conjunction with the Pacific Northwest Fruit exposition.

The main plan of the show was to demonstrate to the consuming public that an excellent potato is being produced in west Washington. Growers west of the mountains believe that many people look to other potato producing sections for their supply on the ground that West Side tubers are not well standardized or put on the market in such a manner as will attract most favorable attention and best prices.

The quality of tubers displayed indicated that the local potatoes need not be second choice when they have once become standardized. The Netted Gem and the Burbank were represented in larger numbers from all counties than were any of the other varieties, while the Pride of Multnomah ran a close third. These were shown largely in market stock entries of 60 pounds each. There were also a large number of fancy bakers and entries of certified seed. A special class was allowed for bakers.

"The entire turnout was very good and as large as any of us expected," said A. B. Nystrom, manager of the show. "It proves that West Side growers can produce tubers that are equal to those raised in other sections of the state, and that we only lack standardization to make them a preferred product on our local market.

Snohomish Leads the Field.

While there were some heavy contestants from Skagit and Thurston counties, the exhibitors from Snohomish county walked away with the most prize money, $145. Whatcom county, while ranking second in the amount of prize money received, was awarded the silver cup for the 10 highest scoring exhibits from any one county. In this they beat Snohomish county by a very close margin. Other counties represented were Pierce, King, Clarke, San Juan, Kitsap and Lewis. The county agents of all the western Washington counties helped greatly in making the show a success.

The state college extension service fitted a booth showing the value of different potato grades, which was educational even to a grower who might be well versed in potato culture. A number of wire baskets were filled with potatoes which had been graded as they came from the field, showing the amount of culls that are ordinarily sorted out by the dealer before sold to the consumer. M. D. Armstrong, who was in charge of the booth, pointed out the fact that the grower should save the freight on the cull potatoes by sorting them out before shipping. A number of samples of U. S. fancy grade potatoes were also shown.

The following interesting facts were printed on large cards and tacked in prominent places about the booth: "Graded potatoes (1) decrease loss from decay; (2) decrease waste in paring; (3) decrease freight bills; (4) increase consumption and demand; (5) increase the consumers' satisfaction and the growers' profit." Another card had the following appeal:

> Mr. Consumer, the best are the cheapest. One hundred pounds of graded potatoes waste only 15 pounds in paring. Mr. Producer, the culls are too expensive to market. One hundred pounds of ungraded potatoes waste 30 pounds in paring.

The second potato booth, a demonstration of treating potato diseases, was arranged by George E. Zundel, plant pathologist of the state college. Two methods of dipping the tubers into the solution were shown, one of which used a small two-bushel barrel with holes bored around the sides, while the other was a large frame containing six trays. In each case a windlass was used to lift the potatoes from the solution. A simpler method was described which consisted of a number of barrels set on two benches of different height, which allowed the solution to run from one barrel to another after the potatoes had been treated. Charts described the mosaic disease of potatoes. No remedy is given for this trouble except the selection of disease-free seed, since no treatment has been found that produces satisfactory results.

In order to demonstrate the cooking qualities of local grown potatoes, Miss Edna Walker, county home demonstration agent, cooked six different varieties in three ways, boiled, steamed and baked.

The round white tuber did not prove as good for boiling, although it showed excellent qualities for baking and stood up fairly well when steamed, but it broke down when boiled. The two varieties of this type were tried, namely, the Earliest of All and the American Wonder.

Miss Walker also had a number of potato dishes prepared and gave samples to the visitors who were interested.

The Netted Gem, Burbank, Pride of Mult-

dividual winners included the following:

Certified seed—Roy R. Taylor, Olympia; Charles H. Greely, Ridgefield, and Hugo E. Engler, Ridgefield.

Uncertified seed—R. A. Baer, Ferndale; Roy Taylor; Guy R. Taylor, Olympia; Eckman & West, Mt. Vernon; John G. Stewart, Auburn; Anderson Bros., Bow; L. R. Campbell, Snohomish; M. F. Snelson, Burlington; R. P. Roberts, Blaine.

Market potatoes—Guy R. Taylor, R. A. Baer, Walter Jensen, Ferndale; Clarence Matthews, Hartford; Arthur Buottner, Ferndale; C. W. Ritter, Ferndale; L. R. Campbell, Paul Kortbein, Snohomish; B. J. Connor, Sedro-Woolley; Carl Belson, Marysville; C. H. Bennett, Nisqually; Walter Larson, Yoman; N. S. Dow, Kent; E. R. Cupp, Renton; Sebastian Hmura, Graham; P. J. Stilling, Puyallup; John Regan, Marysville; A. J. Biggar, Kent, and Charles J. Greely.

Baking potatoes—R. A. Baer; Charles Wood, Friday Harbor; John Regan, Clarence Matthews, L. J. Ganwick, W. F. Baer, Ferndale; Paul Kortbein, L. R. Campbell, John G. Stewart, Carl Nelson, Henry Lark, Arlington; George Stanton, Marysville; N. S. Dow, Sebastian Hmura, R. D. Bates, Sedro-Woolley, and Charles Alexis, Suquamish.

THE WASHINGTON FARMER

VOL. XLVII. NO. 21.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.
SEATTLE, WASH., Office, 617 Central Bldg.
To either of which communications can be sent, but to avoid delay address office nearest you.

S. E. Leith, Fifth Avenue building .....New York
F. H. Bell, Steger building..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Study Agriculture by Mail

Courses in agriculture are being taken by the men in the marine corps and other branches of the service, by means of correspondence. These men are availing themselves of the opportunity to utilize their spare time and fit themselves for work on the farms when their term of enlistment is over.

Of course the greater percentage of the courses are given in other lines, but the fact remains that there are a number that desire to get back to the soil. Prominent among the courses are such subjects as fruit growing, poultry raising, dairying and live stock.

Exchange of Orchard Help

A good example of exchanging orchard help was found in the Fairview district of Yakima, where four orchardists, E. Remy, Clarence Starcher, Sam Kelsay and C. L. Miller, picked and packed their fruit with one crew.

Each man had his fruit of one variety picked in turn, and, when the rounds had been made, the crew began work on another variety. Each man's fruit was kept separate after being packed and a careful check made on the time spent on his place. Clarence Starcher acts as foreman of the picking crew and C. L. Miller superintends the packing.

When one thinks of how many years this plan has been carried out with threshing crews one wonders why it is not done more with the fruit men. Could not more efficient picking and packing crews be employed for a longer time during the fruit season by the above plan than by each man looking after his own orchard separately?

The Future of Gray's Harbor

It is significant of a general awakening to the importance of providing for the future of districts now largely dependent on natural resources, such as timber and fish, that the Hoquiam Commercial club recently appointed committees to work with similar committees from other organizations in outlining a scheme of agricultural development and land colonization which will at least partially insure the future of Grays Harbor county and particularly of the Grays Harbor district, as its two big resources are used up.

Portions of the county which have been long settled, particularly those in the vicinity of Montesano, are already contributing considerably through agriculture to its annual income, but on "the harbor" little has been done toward salvaging logged-off acres, draining wet ones or making the best use of those immediately available.

The agricultural production of the Montesano district now totals about $750,000 annually, that of the county $2,000,000, and in the next five years it is expected to reach $5,000,000. There are 850,000 acres of timber land in the county, besides an enormous territory north and west of the Olympics as yet untouched.

Ultimately, it is anticipated, there will be as great an income from agriculture as there is now from the mills, totaling $15,000,000 to $20,000,000 annually. Before that day comes many problems will have to be solved—such, for example, as that of what to do with 1000 tons of potatoes in the Grays Harbor country right now, with no cars in which to ship them, no market if there were cars, no storage facilities, and a quality rendering storage impossible even if there were warehouses.

Some lines of agricultural industry have made good progress in production and marketing, but it is none too early for commercial organizations with concern for the future of the cities they represent to begin taking thought for that future. Hoquiam has taken a step in the right direction.

The Bugle Call for Action

More than one town, big or little, more than one farming community in this state, big or little, needs a tonic like that administered to Wenatchee by its Daily World:

What's the matter with us, anyhow, around this community? Here we have been parading around the country, patting ourselves on the back, telling ourselves about the great and ga-lorious firm of We, Us & Co.!

And while we have been doing that apples have been rolling down the Columbia river to the seas which should have been turned into a million dollars' worth of manufactured products. Apples—thousands of cars are being dumped while some wiser ones are picking up a few carloads at $6 a ton and shipping them in gondolas to Seattle to be manufactured into vinegars and jellies and butters and other products.

We tried out a little proposition here like the asbestomine plant and because of lack of capital it didn't work out. And because of having tried one thing and failed, we seem to be afraid to tackle anything at all.

The waste of apples that ought to be turned into products worth a million dollars is one of the tragedies of the year 1922. And we haven't done a thing to remedy matters. We know that in many of the biggest manufacturing plants of the country, the by-products turned out mean the difference between loss and failure in many years. Yet here we are allowing what should be our by-product to become a liability on our hands instead of an asset.

If we think that this kind of waste is to go on and that any community can stand up under such passive profligacy, we are liable to wake up some cold morning with a mortgage-ridden community. And what are we doing?—skipping out to California and letting the other fellow work it out. And the other fellow isn't doing it!

Some one has asked, "Why doesn't the commercial club work out something?" Just as though the commercial club were something else besides just us. Hang the thing onto the commercial club or some one else! That's just what we are doing.

We are spending considerable time in cussing the Great Northern for not furnishing cars—but we are not doing a thing to help ourselves to take care of the waste which is bound to come every year. And we know it is going to continue.

And so we need somebody to write a little ditty for us all to sing, entitled "Wanted, a Sanity Committee," or "What's the Matter With Us, Anyway?" Or we might utilize that one to the tune of "Little Brown Jug," which runs:

Fine little town, sure as sin,
We will finish what we begin.
Fine little town, sure as sin,
Darn good town for the shape she's in.

And all season the Shepard products plant is idle on account of the lack of a little money with which to operate.

Wanted: Men big enough to grab a condition by the seat of the trousers and the nape of the neck and shake a result out of it!

Natural resources are here in abundance. The capacity to do things is in our people. Leadership is either active or dormant in every community.

How shall we be aroused to do the things that should be done and that must be done in order to measure up to our opportunities?

Perhaps the Wenatchee World has pointed out the way.

LOOKING INTO OTHER FARM FIELDS

Of the 872,584 pounds of cheese received in New York last week, 532,408 pounds came from state factories, 199,007 pounds from Wisconsin and 119,930 pounds from Illinois. The other supplies originated in eight other states, with 257 pounds from Canada.

* * *

The right of a cooperative marketing organization to enjoin its members from selling their products by other means than through the cooperative organization is denied in the superior court of Pomona county, California. In its opinion the court made it plain that the association can not secure such an injunction, but must proceed through ordinary legal procedure against growers in suit for damages for violation of contracts.

* * *

The average rate of wages for male farm labor for the entire United States, October 1, was $28.97 a month with board, according to the first of a regular series of quarterly reports from 1300 county crop reporters to the United States department of agriculture. The average for the year 1921 was $30.14. By the month without board the average, October 1, was $41.58, compared with $43.32, the average for 1921. Day wages with board, October 1, were $1.57, compared with $1.63 last year, and day wages without board were $2.08, compared with $2.18 in 1921.

* * *

Deseret News: One hears much today about keeping the boy on the farm. It calls to mind the condition 80 years age when the slogan was, "Back to the city." After a tour of the United States in 1834, Harriet Martineau, the English writer, recorded that many Americans were disturbed because the young men were leaving the centers of population and going out to carve farms for themselves out of the wilderness. Industry and commerce were suffering through this countryward exodus of the able-bodied men; help in the cities was not to be had and immigrants could not be held there to do the necessary work.

The perusal of this passage in the English traveler's book ought to be sooting to those who are now bewailing what they call the tendency of young men to turn their faces cityward. It shows that life is not static, that the stream can be reversed again.

State Farm News

The company, of which W. H. Wright and V. C. Campbell are in charge, own 2000 acres in the vicinity and plans to irrigate an additional 2000 on the first and second benches. Marshal lake, covering 300 acres, has two streams flowing into it with no outlet, except in high water in June. Without storing, there will be an ample supply from this lake for irrigation. The building of a dam 100 feet long and six feet high will care for the irrigation of 200 acres.

The company owns all of the land surrounding the lake, except one 40-acre tract. The property adjoins the Kaniksu national forest, with unlimited range for stock. It plans to raise alfalfa and to allow the cattle and sheep to graze in the forest during the summer.

* * *

Information comes to The Washington Farmer of sunflower plants grown by E. P. Gorig at Woodland, southwestern Washington, which measure 20 feet high and 22 inches across flower.

* * *

Martin Iverson, for a number of years a resident of the Eagleton neighborhood, west of Adna, Lewis county, has made an exchange with W. J. Young of Outlook, Wash., for a farm east of the mountains. Mr. Young takes Mr. Iverson's 80-acre farm on a basis of $16,000 and the latter takes the Young place at Outlook on a basis of $14,000 for the 40 acres. Mr. Iverson has moved his family to Yakima county and Mr. Young and family now become Lewis county residents. Other realty deals recently closed involving holdings in Lewis county are as follows: John O. Harms, 73 acres on the Chehalis river to F. Blosl for $12,000; a five-acre tract near Chehalis to C. H. Bailey, recently from Oakland, Cal., for $2500; Hade Morris bought a 50-acre farm near Onalaska for $8500.

* * *

A report from Ridgefield, Clarke county, says that on the ranch of William Katz Jr., 1530 sacks of Burbank potatoes were harvested from seven acres.

* * *

The Union Pacific scholarship in the short winter "ag" course at Washington State college, for the boy between 16 and 21 ranking highest in boys' and girls' club work in 1922, was won in Yakima county by Ray Banks of Selah, who has conducted successful Poland China pig clubs for three years past. The winner was chosen from among boys ranking highest in county club projects, rank in club work counting 75 per cent and activity in community affairs 25 per cent. Five acres of corn, 10 acres of wheat or one acre of potatoes was grown by each competitor. F. L. Audrain, state club leader; Miss Mae Mark, county school superintendent, and A. C. Davis, city school superintendent, picked the winner from among nominees of E. C. Scott, county club agent.

* * *

W. E. Turner of Seattle was elected president of the Washington creamery operators, butter and cheese makers' association, which met at Seattle recently.

Professor O. F. Hunziker of Chicago scored as high as 95 samples of butter submitted by the creamerymen of the state. E. L. French, state director of agriculture, declared that dairying is fast moving to the front among the industries of Washington.

Other officers chosen were Andrew Snell, Puyallup; Carlyle Hall, Seattle, and A. B. Amundson, Wenatchee, vice presidents, and L. W. Hanson, Mt. Vernon, secretary-treasurer.

* * *

The Marshal Lake Power and Land company is developing an irrigation project about five miles from Newport, on the second bench above the Pend Oreille river. The company owns a water right on Marshal lake, and will irrigate 4000 acres by the use of 5000 feet of concrete ditch and wood flume.

The flume is ready to put water on 150 acres, and more will be constructed this winter. The flumes are being built from timber cut on the place. About 140,000 feet were sawed this year, and there is enough to finish the work.

* * *

To promote greater interest in the growing of better potatoes in Skagit county, the first annual potato show was held in Mount Vernon November 3 and 4.

O. W. Eckman and Byron West were the high point winners and took away four sweepstakes prizes. They also won several other smaller awards. The class 1 prize winners follow:

Burbank, Culver Holt, Mount Vernon. Netted Gem, Eckman & West, Mount Vernon. American Wonder, Anderson Brothers, Sedro-Woolley. Pride of Multnomah, B. J. Conner, Sedro-Woolley. Sweepstakes, Eckman & West, Mount Vernon.

* * *

Drainage bonds for district No. 3, in Clarke county, which includes Shillapoo lake, have been sold to the Fred Glenn company of Portland. The company agreed to take not less than $250,000 and not more than $325,000 worth of the bonds at 7 per cent. The bonds were sold at par. The project, which was held up two years ago because of the lack of a market for the bonds, is one of the largest ever attempted here.

FARM BUSINESS AND MARKETS OUTLOOK

The Business Outlook.

The barometers of business continue to indicate expansion in trade and industry.

Freight car loadings in the week ended October 28 were above 1,000,000 for the sixth time on record, and were never exceeded with the exception of one week in October, 1920. Loadings of general merchandise were by far the largest ever known. The tremendous car shortage is a natural outcome. Unfilled orders for cars in the week ended October 30 reached 175,523, the largest on record, and 17 per cent of the total number loaded in that week. Furthermore, railroad officials hold out but little hope that the car shortage will improve soon, although the peak of freight loadings generally is reached about this time of the year.

Building trades are unusually active. Textile mills are operating at a high per cent of capacity. Pig iron output for October was the greatest since December, 1920. The steel industry is running at 75 per cent of capacity and producing more steel than in the best times before the war. Automobile and truck production is phenomenal, with the total for the first 10 months of 1922 but little short of the output for the full year in 1920, which until now has constituted a record.

Retail business in most lines is good. A comprehensive survey shows that retail sales in October were 15 per cent above the five-year average. Sales to farmers were 22 per cent higher than in September and 6 per cent below the five-year average.

Wholesale trade is thriving, as the public is buying and distributors show a greater disposition to stock up ahead than at any time in months. The periodical bulletins of banks are almost uniformly favorable with the note of caution less prominent than for two years or more.

Part of the expansion is merely the return to normal from the extreme contraction of industry which became most acute about 18 months ago. But the pendulum is swinging up on the prosperity side and is apt to go further before turning back. Most views favor an additional year or more of progress in the direction we are now going.

Relatively low prices for farm products, the European situation and the possibility that too much capital will be put into fixed forms such as residential and industrial construction are the forces which may check the expansion process.

If this analysis is correct, demand for farm products in general will be broad as long as the expansion lasts. Practically universal employment of labor means heavy consumption of foods, especially those representing a higher standard of living, such as meats, butter and eggs, which eventually assists the grains used in their production. Wool is aided likewise, and the decrease in recent cotton crops more than offsets any decline in foreign demand, so that this fiber is benefiting greatly from the revival of domestic business.

Cattle Receipts Diminish.

The cattle run is diminishing in seasonal fashion. Kansas City reports the movement of grassers to that market completed, westerns are becoming less numerous at Chicago and even short-feds and warmed-up steers from the corn belt did not troop to market in such large numbers after the early November break. As a result immediate grades of steers recovered about 50 cents, with some yearlings quoted 75 cents higher at Chicago, beef cows and heifers moved up 25 to 50 cents and cutters and bulls made small gains.

Although demand for beef remains broad, beef trade channels remain congested from the heavy slaughter of recent weeks and the days of cheap pork and the popular season for poultry are just ahead, so that a further decline in receipts may be necessary in the next 30 to 60 days to maintain values.

Stock cows and heifers are still selling at bargain prices, but feeders are on a rather high level.

Hog Values Working Lower.

Receipts of hogs last week were approximately 12 per cent above the 10-year average for the corresponding weeks. Eastern markets were well supplied, so that shipping demand was not large and fresh pork prices in the east were quoted lower. Prices held fairly well at first, as packers evidently are vending the product at a profit, but weakness set in toward the close, Chicago reaching the lowest point since early January. Eleven markets received about 560,000 head during the weak, whereas runs of 800,000 head or more are probable before the winter movement begins to ebb. Under the circumstances it is hard to believe that prices have touched botton. However, the difficulty packers are experiencing in getting prices below $8 at Chicago indicates that extremely low prices are not probable this winter. Lightweights on corn belt markets remain at a small discount below medium and heavyweights.

New High on Lambs.

Lighter receipts of lambs caused an advance to a new high for the season of $15 at Chicago, but with a further break in the dressed lamb trade the gain was not held. In the last six weeks receipts at seven leading markets have shrunk 36 per cent, while the number being taken out as feeders shows no contraction as yet. Fed lambs are beginning to predominate and most of the arrivals direct from the range are in feeder condition. Feeders are still buying freely, as they realize there will be few thin lambs to be had when the range season is over.

Horse Market Firm.

All horses reaching the large markets are clearing easily at the advance except light, blemished, unsound or nondescript sorts, which remain a drug on the market. Most horses arriving at Chicago are going east with a few to the northern woods. Coal mines and coal dealers are buying. Above 1550 pounds it is mostly a $225 market or better, with a few up to $275. Wagon horses are bringing up to $190 if they are choice. In spite of 25-cent cotton, southern trade in light chunks is unresponsive.

Wool Buyers More Cautious.

Wool markets report more caution on the part of buyers, although mills are still disposed to purchase whenever they can at prices ruling recently. The goods market continues healthy and the American Woolen company is operating at 90 per cent of capacity, compared with 80 per cent a few weeks ago. Most primary wool markets abroad are firm, although reports are not so uniform as they were a short time ago.

Wheat at Season's High Point.

Continuation of brisk domestic milling demand for wheat, together with moderate sales for export, have lifted wheat prices to the highest point of the season. A lull in sales to mills, together with evidence of a heavier movement from the southwest, caused a setback for a few days, but the loss was more than recovered.

Just how long the demand from mills will continue is not clear. Evidently the invisible reserves of flour have been allowed to run extremely low in the last year or two. When these are replaced, milling demand may taper off. This loss may be offset, however, by a lighter movement from farms. Export demand shows little change.

Political uncertainties are interfering with sales to France, Germany and Italy, but their needs are admittedly large and must be filled some time or other. Latest reports to the department of commerce place the total crop in Europe, exclusive of Russia, at 194,000,000 bushels less than last year. This is some improvement over a month ago, but means much larger imports than last year in spite of extensive use of substitutes.

The situation after January depends more or less on the procedure of Argentine growers. Already foreign interests are beginning the old game of playing off Argentine wheat against North America. Speaking broadly, based on past records, Argentine growers are not likely to sacrifice their surplus, even though it is a large one.

Big Export Business in Rye.

Germany alone is believed to have bought 40,000,000 bushels of rye in North America this season and she is still buying. Large sales have been consummated in the last few days in spite of political disturbances and the vanishing mark. Probably three-fourths of the calculated surplus from the United States has already been sold.

Although export demand for corn has practically ceased because of low offers from the Argentine, domestic feeding demand has been brisk and prices for future delivery reached the highest point since the early spring of 1921.

Cash Grain Markets.

The range of cash grain prices for the week ended November 15 was as follows: Chicago—Wheat—No. 2 red, $1.24@1.29; No. 2 hard, $1.17 1-2@1.20 1-4. Corn—No. 2 mixed, 69 1-4@72 3-4c; No. 3, 66 1-4@72c; No. 2 yellow, 69 1-4@73 1-4c; No. 3, 68@72 3-4c; No. 2 white, 69 1-2@73 1-4c; No. 3, 66 1-4@72c. Oats— No. 2 white, 43 1-2@45 1-2c; No. 3, 42@44 1-2c; No. 4, 40 3-4@43c. Rye—85 1-2@88 3-4c. Barley—60@69c.

Clover Seed Crop Above Average.

The November estimate upon the clover seed crop was 1,878,000 bushels, compared with 2,033,000 bushels a month ago. But last year's yield was only 1,411,000 bushels and the average of the five years, 1916-1920, is 1,564,000 bushels. Prices for both clover and timothy seed are firm.

Chicago, per 100 pounds—Clover, $15.50@20.50; timothy, $6@6.75. Toledo, per bushel—Prime clover, $13.10; prime timothy, $3.45.

Feed.

Demand for feeds is said to be light, with little export buying. Production of all classes is rather heavy and the car situation is loosening up slightly, so that the movement is improving. As a result markets are unsettled, with wheat feeds slightly easier.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $25.50; standard middlings, $26.25; flour middlings, $29; cottonseed meal, 36 per cent, $48.75; 43 per cent, $53; hominy feed, $29.50; gluten feed, $35.85; old process oil meal, $52; tankage, $65.

Hay Prices Unchanged.

The small changes in hay prices in the last six weeks have been toward a higher level. Light receipts sustain the market and a little improvement in demand is noted at some points as a result of buying by the cotton belt.

Prices per ton in carlots: Chicago—No. 1 timothy, $21@23; No. 2, $17@18; No. 3, $14@16; No. 1 light clover mixed, $20@21; No. 1 clover, $17@19; No. 1 clover mixed, $1 @19; No. 1 to choice alfalfa, $25@27; upland prairie, $20@21; midland prairie, $13; rye straw, $12@13; oat and wheat straw, $9@12.

Big Reduction in Storage Eggs.

The reduction in storage holdings of eggs in the United States during October was 2,150,000 cases, which was larger than expected, based on partial returns, and the largest for that month since the records have been compiled. The remainder on November 1, however, was 5,715,000 cases, the largest ever known on that date. Since fresh receipts usually are lighter in November and December than in October, distribution of storage eggs during those months should be as great as or greater than in October.

Advance in Butter Checked.

The advance in butter prices was checked last week as a result of an unexpected increase in receipts, due partly to the arrival of delayed shipments and to larger intermarket shipments of storage butter. At the same time the trade output declined either because of a lull in consumptive demand as a result of high prices or because retailers are operating in a more hand to mouth fashion.

Prices for 92-score fresh butter on November 15 were: Chicago, 49c; New York, 30c; Boston, 49c; Philadelphia, 51c.

Better Tone in Cheese Market.

After a slow start the cheese market developed considerable activity before the close of last week.

Since storage holdings on November 1 were as small as they usually became by January 1, the situation from the angle is favorable.

Prices on No. 1 American cheese on November 15 were: Chicago—Flats, 24 3-4@25c; twins, 24@24 1-2c; single daisies, 24 1-2@25 1-4c; double daisies, 24 1-2@25 3-4c; young Americas, 24 1-2@25c; longhorns, 25 1-2@26c; square prints, 24 1-2@25c.

Fruits and Vegetables.

Potato shipments from producing sections are falling off so that prices in city markets show more stability, but no upturn has been effected. Recent cold weather has damaged a large quantity before digging and in transit. A further increase in the movement from first hands is due in the next few weeks and values should respond, as potatoes are not apt to come out of storage at this level. Brown Beauties are quoted at 45 to 50 cens per 100 pounds sacked f. o. b. Colorado points and Rurals at 30 to 35 cents, with Russets 50 to 60 cents f. o. b. Idaho points.

Apple markets are dull, with the movement from producing sections lighter, although the movement of boxed apples is rather heavy. Extra fancy northwest Jonathans, medium to large sizes, are bringing $2.25 to $2.50 per box at Chicago.

Long and Short Haul

Oregon Wool Growers' Association and Washington Wool Growers' Association Win Sweeping Victory

In a decision the other day by the interstate commerce commission the Oregon Wool Growers' association and the Washington Wool Growers' association win a sweeping victory.

Since 1913 the transcontinental railroads have been building up Portland as the wool center of the northwest. In violation of the fourth section of the transportation law of congress they have been charging much higher rates on wool shipped from interior points to the east than on wool shipped from Portland and other terminals to the same eastern destination.

The rate from Portland and other terminals on the long haul to Boston was only $1.50 per 100 pounds on wool in the grease in bales, the form in which most of the wool moves. At the same time the railroads were charging for the shorter haul a rate from Spokane to Boston of $2.39 a hundred, from Boise of $2.70, from Butte of $2.40 and from Salt Lake of $2.35 1-2.

Under these discriminating and unlawful rates it was actually cheaper for interior wool growers to ship their product west to Portland and then pay the Portland rate on the long haul than to pay the through rate from the interior shipping point to Boston.

But the railroads were not satisfied with that and petitioned the interstate commerce commission for authority to reduce the Coast rate to $1.35 per 100 pounds. That was the last straw that broke the camel's back. Wool growers all over the interior arose in protest and fought the matter out before the commission at Washington. The commission now decides that the roads must not charge more for the short haul from the interior to Boston than they charge for the longer haul from Portland to Boston.

In the same connection the interstate commerce commission decided the long standing and hard fought intermountain rate case in favor of the interior producers and communities.

For several years the vast interior country between the Cascade mountains on the west and the region on the eastern slope of the Rocky mountains has had terminal rates. That is to say, the roads have not been allowed to charge interior communities and producers more for the short haul from the east to the Pacific coast terminals. With the ending of the war ships came back into service through the Panama canal and have taken a part of the business that was enjoyed exclusively by the transcontinental railroads when the country was at war and the ships were out of service. In May, 1921, the transcontinental railroads went before the interstate commerce commission with a request that they be allowed to reduce rates about 20 per cent to the Pacific coast terminals, but without granting any relief from war-time freight rates to the interior.

The commission decides against the railroads on every point. It holds that the proposed cut at the terminals would be in violation of sections three and four of the interstate commerce law. The commission further decides that "it clearly would defeat the intent of congress to foster transportation by rail and water in full vigor if the rail carriers were permitted, at practically little or no profit to themselves, to operate so as to deprive water carriers of traffic which the water carriers would naturally handle.

As THE FARMER had previously pointed out, if the railroads in this case had been allowed to engage in cut-throat competition with the ships at the Pacific coast terminals the only beneficiaries would have been the mercantile interests of Seattle, Tacoma and Portland, and the inevitable effect would have been to compel the railroads to compensate themselves for that unprofitable business by charging war-time rates on other transportation service. That would have fallen with crushing weight upon the producers. The interstate commerce commission holds to that same view. In its decision it says:

"Moreover, it must be borne in mind that where the out-of-pocket theory is used as a rate basis (the railroad proposal) there is inevitably thrown upon the rest of the traffic the task of providing the bulk of the net returns contemplated in section 15-A of the law. Too wide an extension of the out-of-pocket theory would transfer the entire burden of producing dividends and interest and in meeting the fixed charges upon a part only of the traffic carried."

The decision is clearly against the railroads, both on points of law and on the folly, from the viewpoint of their own interests, of the cut rates which the railroads wanted to put in at the terminals. The upshot is that the commission tells the roads they were trying to do a foolish thing and to break the law to do it.

We congratulate the wool growers and other farm producers upon this substantial victory. The decision confirms the judgment of President Harding, stated in his message to congress of December 6, 1921, as follows:

"The existing scheme of adjusting freight rates has been favoring the basing points until industries are attracted to some centers and repelled from others. A great volume of uneconomic and wasteful transportation has attended, and the cost increased accordingly. The problem may well have your earnest attention."

The commission's decision is practically unanimous. It is concurred in completely by nine of the 11 members, and in part by the other two. Moreover, it confirms a deepening suspicion in the minds of many observers that the railroad managers generally have not been using the best judgment in rate making.

Short Courses

For Western Washington Farmers

The following courses are free to residents of the state. Persons wishing to enroll in any of these courses should apply not later than December 1 to the director of the western Washington experiment station, Puyallup, Wash.

Poultry Courses.

Opens second Monday in January. In this course about equal time is devoted to lectures and practice work. Three lines of study are included in the lectures, poultry management, construction of poultry houses and equipment and the control of poultry diseases.

The study of poultry management includes lectures on types and varieties of chickens, principles of feeding and breeding of poultry, handling the breeding flock, incubators, brooding chicks and management of laying flock, and is in charge of Mrs. George R. Shoup, poultry specialist.

Lectures and demonstration on laying out a poultry plant, the construction of laying houses and brooders, equipment for poultry buildings and convenient labor-saving devices are given by George R. Shoup, poultryman.

The study of common diseases of poultry and the maintenance of health in the poultry flocks is in charge of Dr. W. T. Johnson, veterinarian.

Half of the time each day is given to practice work taking care of the 2500 station birds, tending incubators, caring for young chicks and all lines of work incident to the handling of a commercial poultry plant.

Dairying and Farm Crops.

Opens the second Monday in January. The dairying course includes lectures and demonstrations on the care and management of dairy cattle, on soils and crops and on the control of diseases of dairy cattle.

The lectures on feeding, management, breeding and judging of dairy cattle, testing and handling of milk and home buttermaking are given by H. E. McNatt, dairyman.

The study of types of soils, soil management, maintenance of fertility, drainage, production of farm crops adapted to western Washington is in charge of M. E. McCollam.

Lectures on the common diseases of dairy cattle, their prevention and cure are given by Dr. W. T. Johnson, veterinarian.

Course in Berry Growing.

Opens the fourth Monday in January. The course in berry growing includes three lines of study; soils, general culture and diseases of berries. Lectures are given in the forenoon and practice work in the afternoons.

The study of soil formation and classification, soil moisture, drainage, soil fertilizers, tillage and cover crops is in charge of M. E. McCollam, agronomist.

Lectures and demonstrations on berry types and varieties, propagation, location, planting, training, summer culture, harvesting and care of fruit are given by J. L. Stahl, horticulturist.

The study of diseases and insects of berry plants and their control is under the direction of Arthur Frank, plant pathologist.

When weather permits the afternoons are given to practice work in handling and training of berry plants.

Opens the first Monday in February. The tree fruit course includes a similar study of soils, general culture and diseases of tree fruits to that given in the preceding course in berry growing. Considerable importance is given to a study of tree physiology and of fruit buds and practice in pruning, top-grafting, identification of fruit tree diseases, mixing and applying sprays. The work is under the direction of the same instructors in charge of the berry course.

COMBINATION OF STOCK.

"One of the best ways to maintain good pastures for a dairy herd is by keeping a definite system of crop rotation," said B. C. Vander Griend, one of the partners of Vander Griend Brothers' Guernsey farm of Lynden. "It is our custom to raise hay for two or three years and then pasture for three more years. After some of the best grasses begin to die off it pays to turn the crop under, raise grain and clover crops for at least two years and then seed it back to clover and timothy.

It is not hard to carry out a systematic rotation. For silage crops we have tried both corn and sunflowers, but prefer oats and vetch or oats and peas, since the yield is greater and the crop can be harvested earlier in the season. Clover, however, is often used for summer silage, especially in a wet season when it is difficult to cure it for hay. There are times when we find it advisable to let the grain crop ripen instead of using it for silage. We grow as much of our own grains on the farm as possible."

Besides the 35 to 40 head of cattle cared for on this farm there are 400 chickens and two or three brood sows kept in order to utilize the skimmed milk. The hens and the calves get all the milk they can use, and surplus goes to the pigs.

Mr. Vander Griend feels that a combination of stock is necessary for best results in his community. There are times when the proceeds of the cows will not be as large as it should be, and as a general rule the profit from the poultry house will offset any disadvantage in milk production. In any case the work required for a small flock of chickens does not interfere greatly with the care of dairy cows.

Mosaic in Potatoes

"Mosaic disease is becoming more and more troublesome throughout the potato growing sections of the state," according to George E. Zundel, plant pathologist of the state college. "This," he said, "is a virus disease which is spread both by tubers from diseased plants and by aphids.

"So far no remedy has been found for treating either the seed or the plants. The only way the grower can be assured of clean seed is by selecting the plants before the growing season is over. No tubers should be used from diseased plants, since they carry the infection to the next year's crop. There is no way to distinguish the disease in the tuber after digging, but the disease generally results in fewer potatoes in the hill.

"Rogueing of the seed plot is strongly advised, and all vines pulled that show any mottled appearance of the leaves. Plant pathologists are working to find a remedy for the trouble," concluded Mr. Zundel, "and it is possible that some solution can be found in the near future."

Meet in Spokane

The executive committee of the National Wool Growers' association, one of the oldest and largest live stock organizations in the entire country, has selected Spokane as the place for holding the 58th annual convention, and has named the dates of Wednesday to Friday, January 24 to 26, 1923. The Washington Wool Growers' association will hold its 21st annual convention in the same city on Monday and Tuesday of the same week, January 22 and 23, so that a big time is assured wool growers of Washington and the Pacific northwest.

This arrangement gives all members of the Washington association the unusual opportunty of attending the national convention, and officials of the latter have been assured that the state organization will furnish an attendance of 300 or 400. The Washington Wool Growers' association has the reputation of being the best in the country, and consequently considerable will be expected of it. Every sheepman in the state is being urged to make his plans for attending, and an unusual program of education and entertainment is being provided. Headquarters for Washington wool growers will be at the Spokane hotel, while those for delegates to the national will be at the Davenport.

The National Grange

The national grange convention is in session at Wichita, Kan. Later issues of THE FARMER will contain liberal reports of this important convention.

Notable in the opening days of the convention was the address of Master S. J. Lowell. An outstanding point in his address, a digest of which will be given later, was a declaration against the proposed ship subsidy as planned in a measure now being urged upon the extra session of congress, which opened this week.

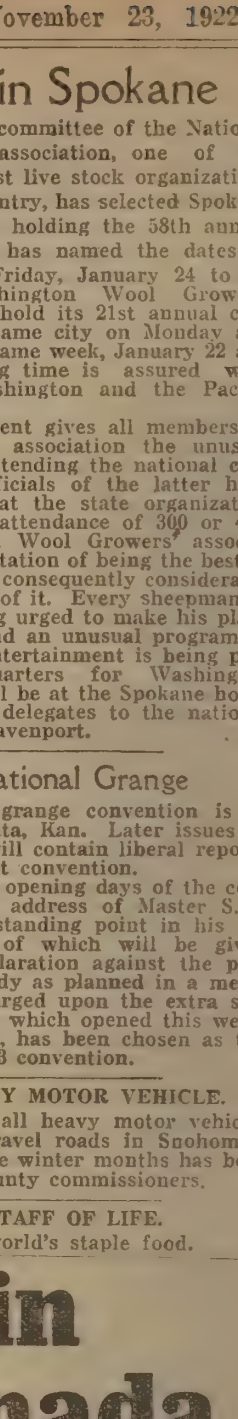
Pittsburgh, Pa., has been chosen as the place for the 1923 convention.

BANS HEAVY MOTOR VEHICLE.

Operations of all heavy motor vehicles over dirt and gravel roads in Snohomish county during the winter months has been baned by the county commissioners.

THE STAFF OF LIFE.

Bread is the world's staple food.



Succeed in Western Canada

Thousands of the most successful men in Canada today started without half the advantages that are yours there now!

Come to Canada! cries opportunity. Here men can succeed. For with all that has been done, there are untold opportunities awaiting men with the ambition to be successful.

Lands are reasonably priced—sufficient acreage to meet all your needs—of virgin fertility—living conditions are good. Men like you are working shoulder to shoulder—helping themselves by helping others. Crop conditions are satisfactory. Success comes to the man who works for it.

Let Profit Replace Uncertainty

If you are a tenant farmer, ambitious to own your own farm—or if you are farming under the handicap of drought or overcrowded conditions—or if you are seriously looking for an opportunity where your boy can own his farm—investigate Canada.

This Is a Message of Opportunity

Come from the place where men call for land to the place where land calls for men. This great railway will help you locate. Our services and all that we know about Canada are at your disposal free. We can help you as we are helping others. Send for our special descriptive folder.

What Are the Advantages?

This Department of the Canadian National Railways will help you to locate just the kind of farm and in the locality best suited to you. Your farm should be selected from the cream of the richest wheat and cattle country in America.

Low Prices

You can buy land unsurpassed for fertility along the lines of the Canadian National Railways from $20.00 to $50.00 an acre. Such land yields abundantly and is suitable for grain growing and mixed farming. Our booklet describes the yields per acre.

Easy Terms

The land is low in price, and easy terms place it within reach of all: You make only a small first payment, usually 10% or less—the balance being spread over a term of years with low interest rates. The value of one year's crop has been known to pay in full for a farm in Western Canada.

Low Taxes

Small land tax. No tax at all on buildings, improvements, animals, machinery, or personal property.

Substantial Profits

The world's market awaits all that Western Canada can produce. Dairying is highly profitable. Stock thrives on the prairie grasses. Cattle and horses require only natural shelter most of the winter.

Canadian National Railways

Everything to Help

Friendly neighbors with your customs and language—splendid schools, churches and social life—warm, sunny summers, and dry, healthful winters—efficient labor supply.

The Farm Bureau Movement

As Seen by A. C. Davis, Secretary National Farmer's Union

The following telegram to President Howard of the American Farm bureau explains the position of THE WASHINGTON FARMER when giving the news of farm organizations.—Editor.

Spokane, Wash., Nov. 15, 1922.

James R. Howard,
President American Farm Bureau,
Chicago, Ill.

The Washington Farmer is publishing President Charles S. Barrett's address to annual convention of National Farmers' union and is also publishing an abstract of Secretary A. C. Davis' statement regarding farm bureau. We believe farmers are entitled to know what great farm organizations are doing and saying. Shall be glad to receive from you statement for publication regarding the questions involved.
THE WASHINGTON FARMER.

In his annual address to the Farmers' union convention in Lynchburg, Va., and already published in THE FARMER, President Charles S. Barrett referred to a copy of the Farmers' union statement prepared by A. C. Davis, the secretary of the national union and entitled "Who and What Are Behind the American Farm Bureau Movement."

This is quite an extensive document and "has been prepared in answer to an overwhelming demand of Farmers' union officials and members who insist the time has come to speak plainly," in the words of Mr. Davis.

The statement goes back to the first county farm bureau, which was organized in Broome county, New York, a little more than 10 years ago as a branch of the Binghampton Chamber of Commerce. An agent was put in charge of this bureau as other men were in charge of other departments of the chamber of commerce and, since his functions were confined to Broome county, they called him the county agent. In that way the farm bureau and the county agent became established terms. And right here, according to the viewpoint of the Farmers' union officials, the "unholy alliance" was entered into by the farm bureau. The statement quotes from an addent of the Chicago Board of Trade, before the president's agricultural conference in Washington, D. C., in January, 1922. Mr. McDugall said: "The board of trade looks on the farm bureau movement as the greatest forward step taken by American agriculture in the last 40 years. The board of trade helped start this movement and feels considerable pride in its rapid growth and power. The first farm bureau in the United States—Broome county, N. Y.—recently celebrated its 10th birthday and the speakers of the day pointed out how the financial cooperation of the Chicago Board of Trade, with the agricultural and other local interests, initiated this movement successfully and put it on its feet. In this way the crop improvement committee of the board of trade was a sort of grandfather to the farm bureau movement. A cash grant of $1000 was made to each of the first 100 farm bureaus formed, beginning with the one in New York state and spreading to Iowa and other middle western states."

Then the statement goes on to say "Former Secretary of Agriculture Houston, a member of the southern educational board of Mr. Rockefeller's general educational board of New York, used his power and influence while secretary of agriculture to build up the farm bureau movement; that he sent out word through the several thousand county agents and agricultural extension workers to the farmers to hurry up and form and join the county farm bureau, in order, as he expressed it, to constitute a bulwark against what he chose to call the growing spirit of unrest existing among the farmers. While Mr. Houston was secretary of agriculture many hundreds of thousands of dollars of Rockefeller money was used in and spent annually by the department of agriculture."

According to Dr. T. C. Atkeson, Washington representative of the national Grange, the statement says, the idea of the American Farm Bureau federation "originated here in Washington following the armistice, with Messrs. Hoover, Baruch and Julius Barnes. Dr. Atkeson has stated a number of times that during President Wilson's first industrial conference Mr. Hoover talked to him on several occasions and said in substance that there ought to be 'some authoritative farm organization so that the sheep could be separated from the goats' and that the movement could very well be built around the county agents."

The statement finds a "close relationship and understanding" between Mr. Hoover and the Curtiss Publishing company, which "resulted in a widespread agitation of Mr. Hoover for the presidency in 1920. He apparently also induced the publishing company to stake the farm bureau with tens of thousands if not hundreds of thousands of dollars for free publicity." The statement quotes from a statement before the house banking and currency committee July 20, 1921, in which it was brought out that in December, 1919, J. W. Coverdale, who at that time signed himself "temporary secretary," wrote to S. L. Strivings, president of the New York State Farm bureau: "I am enclosing herewith two copies of an advertisement of the American Farm Bureau federation prepared by the Country Gentleman which is to be placed in 61 leading daily newspapers of the United States which have a total circulation of over five millions. These ads are to be paid for by the Country Gentleman without expense to the federation."

Claims that the farm bureau leaders are hobnobbing with the business interests more than is good for the farming industry are given in the statement; where these farm leaders are consulting with bankers, financiers, railway men and chambers of commerce. For instance, "at a luncheon in Chicago where Mr. Howard was a prominent guest, J. Ogden Armour arose and, pointing affectionately to the head of the farm bureau federation, said, 'There sits the man who should be secretary of agriculture. He is the only farm leader who is able to talk in our language.'"

Gray Silver, legislative representative of the American Farm Bureau federation, is charged with earnestly requesting that effective control of the meat packers be stricken out of the republican platform by the committee of the convention in 1920, but that his request was emphatically rejected. The statement also says that President Howard's indorsement of the ship subsidy measure does not generally represent the view of the farmers.

Considerable of the statement is taken up with the history of the U. S. Grain Growers, Inc., and the declaration made that "the national farm bureau does not believe that the relationship existing between the county agents and the farm bureau is in the interests of the farmers"; that this relationship is contrary "to the spirit and letter of the Lever act and works to the disadvantage of all self help to farm organizations; "that these criticisms led to a memorandum of understanding signed by Dr. True of the states relation service of the U. S. department of agriculture and Mr. Howard, president of the American Farm Bureau federation, by which the county agent is to aid the farm people "in a broad way with reference to problems of production, marketing and formation of farm bureaus and other cooperative organizations, but will not themselves organize farm bureaus or similar organizations" or "take part in other farm bureau activities which are outside of their duties as extension agents"; "but that these fine discriminations are better in words than in practice. That the farm bureaus are made up more or less of those who are not dirt farmers."

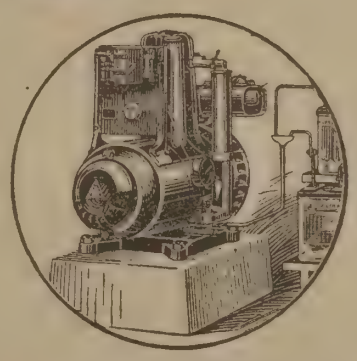
USED SODIUM NITRATE.

E. E. Fitzgerald of Ferndale has harvested a bumper crop of Baldwin apples. It is unusual for this variety to yield so heavy, and Mr. Fitzgerald attributes the crop to the use of sodium nitrate in his orchard last spring.

The trees were thinned during each summer, but still there is a heavy crop of fruit on all trees, with the exception of the check row which was left without fertilizer.

Mr. Fitzgerald also has a few pear trees that have made a good showing in spite of the dry season. He believes that pears will become one of the main orchard crops of this section.

Now back to 1917 Prices!



MAKE this Christmas one of the happiest your family has ever known—one they will never forget—one they will look back to year after year with fondest memory. Put Delco-Light in your home for Christmas.

Think of the happiness in your home on Christmas eve, with the family enjoying Christmas pleasures in rooms flooded with bright, cheery, Delco-Light.

And think, too, of the joy in the minds of all in knowing that Delco-Light will continue to make the home brighter, happier, every day in the year—that running water can be available anywhere you want it—that there will be power to run the washing machine, to milk the cows, and help with so many other chores.

You've probably been thinking for years that sooner or later you would buy Delco-Light. Now is the time to do it. The new big price reduction and time payment plan make it easily possible.

See your Delco-Light Dealer.

Would Put Great River to Work

Picturing the Columbia river as a sleeping giant that should be awakened from his age-long slumbers to water thousands of acres of fertile soil, float millions of tons of farm produce to the sea and operate industry and light homes and factories with electric power, the open river conference at Pendleton last week wound the clock and set the alarm for the giant's early awakening.

"Whereas, The secretary of war is authorized and directed to appoint a board of engineers to examine the Columbia river from Vancouver to Priest Rapids, and the Snake river from its mouth to Asotin, Wash.," reads a resolution, "and to study and report with a view to canalization of these rivers for barge navigation and for the development of hydro-electric power, in cooperation with local interests in connection with such canalization to be used for the irrigation of arid lands adjacent to these rivers, now therefore,

"Be it resolved by this association, That the secretary of war be requested to appoint such body of engineers and to see that a full report is submitted in order that the same may be had by the reclamation department or the federal power commission or any other department of the federal government or board authorized by congress to proceed with such work if the same is to be found feasible."

Another part of the resolution went vigorously on record in favor of the early enactment of the Smith-McNary reclamation bill now before congress. The resolution reads:

"Be it resolved, That as part of the canalization of the Columbia river and for the development of hydro-electric power and for the irrigation of now waste land, this association believes that the Umatilla rapids presents a project worthy of immediate consideration and action by the general government, and that as one means of procuring necessary government funds for the purpose of reclaiming arid land this association strongly urges the enactment of the Smith-McNary bill now pending in congress."

From every direction came pleas for water for more arid land, for more and cheaper electrical power and for easier transportation of the products of the Inland Empire to tidewater.

That there are immense possibilities for all three tied up in the great river was admitted by all. River transportation was pictured not as a competitor of rail transportation so much as a cooperator with it.

"Changes in methods of land transportation require and compel changes in methods of water transportation if the waterway is to be economically usable," said J. N. Teal of Portland, one of the leading speakers. "And unless it can serve a useful purpose there is no justification for the expenditure of public moneys on waterways. In the face of the widespread and very intelligently directed propaganda against the expenditure of public money for the improvement of waterways and the difficulties placed in the way of their use, it behooves the friends of the waterways to act with prudence, discretion and wisdom.

"Moreover, the various forms of transpotation must supplement and complement each other," continued Mr. Teal. "Whether this generation of transportation managers must go the way of all flesh before the warfare, both open and concealed, on waterway improvements and transportation will cease I can not tell. But this much is certain, if we are to compete in the markets of the world with the nations of the world we must have the use of the cheapest and best forms of all kinds of transportation agencies, and the nation's welfare will ultimately be the yardstick by which this question will be measured.

"Furthermore, it is not prudent, even were it now possible, to depend only upon the railroads to furnish all the needed transportation facilities for the business of the country. It would cost too much money, even if sufficient rail transportation could be secured, and it is doubtful if with our constantly expanding commerce rail transportation alone would be able to care for it. Even if this were possible, the billions it would require to furnish all the needed transportation would be too heavy a charge on industry and commerce to even contemplate. While water transportation is the cheapest, commerce requires all forms of transportation, and one could not exist without the other. Therefore the form the transportation should take should be determined as is any economic question. Where rail is best it should be used, where water is best it should be used. But the proponents of neither form should look on the other as an enemy to be done away with."

The Smith-McNary reclamation bill, which was indorsed by the conference, provides for the creation of a federal fund of $350,000,000 to be known as a revolving fund. As irrigation development progressed, portions of this fund would be repaid and the money again made available for development in other localities.

The conference was well attended by representatives of all parts of the Inland Empire and from other parts of Oregon, Washington and Idaho.

Install Labor Savers

A total of 463 home conveniences was purchased by members of testing circles recently conducted among rural women in the state of Washington, under the supervision of the extension workers of the United States department of agriculture. A testing circle is usually a group of six women in a community who try out one article at a time in their homes, and then pass it on in exchange for another piece of desirable eequipment. Testing circles were formed in rural communities all over the state.

As a result of trying out labor-saving devices in their homes 105 women bought pressure cookers for canning and cooking, 96 bought fireless cookers, 75 bought dishwashers, 70 selected utility tables, 60 wanted steam cookers, 24 purchased gasoline irons, 20 installed bread mixers and 13 obtained vaccum cleaners. It is interesting to note that the dish drainer apparently saved more actual time to each individual user than any other device except the pressure cooker, which, it is estimated, will save Washington housewives 32,445 hours of time annually. Moreover, a dish drainer saves energy as well as time, since the operation of wiping the dishes is eliminated. This would not be true in the case of a cooking device, because the housewife would not necessarily have been active every minute while the food cooked. Each of the 75 women who bought a dish drainer expected to save 180 hours a year, or half an hour a day by its use.

Washington's Finest Fruits Meet

(Continued from page three)

Orchard, Stratford, Moses Lake and Hiawatha Valley. They were all grown under irrigation from power pumps. The idea of the display was to show what can be produced in the Columbia basin under the new irrigation project which will cover 1,700,000 acres in Grant county alone.

The Okanogan-Omak district display was a very beautiful assortment of Wenatchee apples in a tray arrangement. Red apples were used in building the words, "Okanogan-Omak."

Okanogan county was represented again by a display from the United States government irrigation project, which contained two displays of tray apples with plates of fruit in the center. Large maps were tacked up to show the location of the project and the value of the crops in this district.

An exhibit of different apple grades was given in one of the state college booths which brought out the importance of selecting perfect and well colored apples for the fancy and extra fancy packs. "It is by careful methods of grading and packing that the northwest has become famous all over the entire United States for its high quality of fruit." The above was printed on a large sign and displayed in front of the extra fancy grades. Mr. Armstrong held a grading and packing demonstration in this booth twice each day.

Clarke County Nuts Shown.

A. A. Quaranberg of Vancouver, Clarke county, Washington, had his usual display of nuts, which was as large if not better than his exhibit shown last year. Mr. Quaranberg is a pioneer nut grower of the state, and has originated new varieties from seedlings. He is very optimistic as to the possibilities of nut growing on the Pacific coast.

The Hanford district of Benton county entered a display of grapes, peaches, pears and quinces from their new project along the Columbia river. The quality of this fruit indicates great possibilities for this section as a fruit raising district. The Mossyrock districts of eastern Lewis county were unfortunate in not receiving their supply of fruit in time for the opening of the show. Their decorations, however, were unique, since they consisted of a moss background with the name of the districts in moss letters.

The display nearest the main gate was the Kitsap county booth, which had an exhibit of canned goods put up by the boys' and girls' clubs. The jars were uniform in size and labeled with their own sticker bearing the trade name of the "Four H Brand." In the center of the display was the club motto: "To Make the Best Better." Another sign called attention to the fact that Kitsap county was a district "Where the Boys and Girls on the Farm Have a Chance."

The Seattle public schools had a display of canned goods in the next booth. The work represented 31 different schools, part of the work having been done at home and some of it class work.

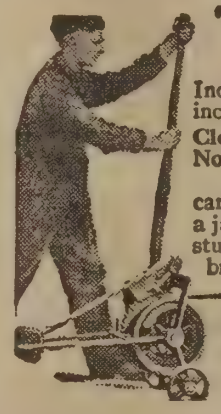
The Seattle Chamber of Commerce occupied the next space, which was decorated with natural foliage as a ceiling and background. The space was used partly as an information booth and reception room.

In the commercial department at the end of the building were a large number of booths representing different business houses, among them being a display of cased eggs from the Washington Cooperative Egg and Poultry association. Cards were exhibited which told about the different egg grades and of the value of buying eggs under the association's new sealed cartons of one dozen each.

The Seattle Milk Shippers' association displayed their wares by means of Pierce county's milk-drinking doll, which attracted much attention. From this booth the association distributed many cases of bottled milk daily, free of charge, to children visiting the show. The association produces and ships into Seattle 2000 10-gallon cans of milk daily.

The North Pacific Cooperative Berry Growers of Seattle set up a miniature strawberry patch which showed three systems of planting. There were also some canned berries in tin and some barrels of strawberries preserved in sugar.

WIN POTATO CONTEST.



The boys and girls' judging contest at the recent Olympia Potato show resulted as follows: First, Robert Adair; second, Roy Taylor; third, Archie Haydeen. There were six boys in the entire club, all of which were in the Thurston County Garden club.

Sweet Clover for Pasture

A. F. Bernard of Alfalfa, Yakima county, believes in the raising of sweet clover for a pasture crop, and has between 15 and 20 acres which was seeded with the grain crop last season. By so doing the crop lasts two years and is seeded again as needed in other grain crops. Some of the bottom lands, however, are kept permanently seeded to sweet clover by letting each year's crop go to seed late in the fall. Some of this land, however, is subirrigated and needs no water, while some of the higher spots require a little attention.

There were 17 head of stock pastured on four acres of sweet clover for the biggest part of six months, according to Mr. Bernard. One of the strong points in favor of sweet clover as a pasture crop is the fact it holds on until the latter part of October each year and it also is one of the first pasture crops to come through the ground in the spring and it does not bloat.

Turn stump land into Money

Increase your acreage and thereby increase your income.
Clear your stump land cheaply.
No expense for teams or powder.
One man with a

HAND POWER **K Stump Puller**

can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Write today for special offer and free booklet on Land Clearing

Works equally well on hillsides and marshes where horses cannot operate

U. S. ARMY COTTON BREECHES. Regulation issue. Reclaimed No. 1 condition. Sizes 26 to 34 only. Suitable for men and women. Now 98c

U. S. ARMY O. D. WOOL BREECHES. Reclaimed No. 1; sizes 28 to 36. Now $1.95

O. D. REGULATION U. S. ARMY SHIRTS. Pure wool. Bosom lined, Double elbows. Each shirt has government label. Sizes 15 to 19. Now $2.95

O. D. REGULATION U. S. ARMY LONG PANTS. Pure wool. Reclaimed No. 1. Sizes 28 to 34 only. Now $2.45

PURE WOOL O. D. BREECHES. Government issue. All sizes (new). Now $3.95

U. S. ARMY WOOL COATS. All wool army blouses, O. D. serge, lined. Sizes 32 to 38 only. An exceptionally fine coat for work. Reclaimed No. 1 condition. Now 98c

U. S. Army Wool Coats (as explained above). Brand new. Sizes 36 to 44. Extra special $1.95

PONCHOS. Genuine government poncho, absolutely waterproof. Are used in the army as capes. Can also be used as a pup tent and as automobile covers, etc. Extra special price $1.25

GENUINE U. S. ARMY FIELD SHOES. Plain or cap toe, without the hobnails. Now $4.45

UNDERWEAR. Wool two-piece underwear. All sizes. Now, garment 98c
Pure Wool Army Underwear—Sweater neck. Now, garment $1.45
Extra Fine Pure Wool, 100 Per Cent Union Suits—(All sizes). Gray. Now $3.95
50 Per Cent Wool Union Suits In O. D. or gray. All sizes. Now ... $3.45
A wonderful Union Suit—Wool. Now $2.29

BLANKETS.
O. D. Government Pure Wool Blankets—(Reclaimed.) Now $2.75
Government Blankets, O. D. Pure wool, 72x84. Now $3.90
Extra Heavy Wool Blankets. (Double). Gray. Special (now)..... $4.95
Fancy Blankets, in all colors. Can also be used as auto robes. Now ... $3.95

KHAKI HANDKERCHIEFS. Now 9c

O. D. FLANNEL SHIRTS. A wonderful work shirt (All sizes.) Now $2.45

HICKORY SHIRTS, 14 to 17 only. Now 98c

U. S. ARMY CAMPAIGN HATS. 6¾ to 7⅞. Reclaimed. Now 98c

ARMY JERKINS. A genuine leather coat without the sleeves. O. D. wool lined, 32 inches long. Sizes 36 to 46. Now $4.95

SWEATERS. Pure wool sweaters. Roll collar, in maroon, khaki and combination colors of blue and gold, black and orange, etc. Sizes 36 to 46. Now $5.49

SHOES. Genuine U. S. army garrison shoes. Reinforced French back stay, double sole. Russet color. Sizes 6 to 11. Now $5.45
Officers' Dress Shoes—Plain toe. Cordovan dark chocolate. Sizes 5½ to 11. Now $4.95
Heavy Work Shoes—All sizes. Now $3.45

EXTRA HEAVY PURE WOOL BLANKETS in gray and white, blue and other colors. (Double.) Now $7.65

EXTRA HEAVY COTTON UNION SUITS—Silver gray. (All sizes.) Now $1.29

KHAKI SHIRTS. (All sizes.) Now 98c

PURE WOOL NAVY SOX in heavy weight. Now 39c

GENUINE GOAT HAIR SOX Pure wool. Now 39c

U. S. ARMY RAINCOATS. made with double cape back. New (All sizes.) $6.95

MEN'S WORK SOX (Gray). (Brown mixed.) Now 11c

O. D. WOOL SPIRAL WRAP LEGGINGS Pure Wool Spiral Wrap Leggings. New 95c

SWEATERS. Pure wool sleeveless sweaters. Long yarn. O. D. Now $1.49
O. D. Pure Wool Yarn Sleeveless Sweater, extra heavy, double, reversible. Now $2.39

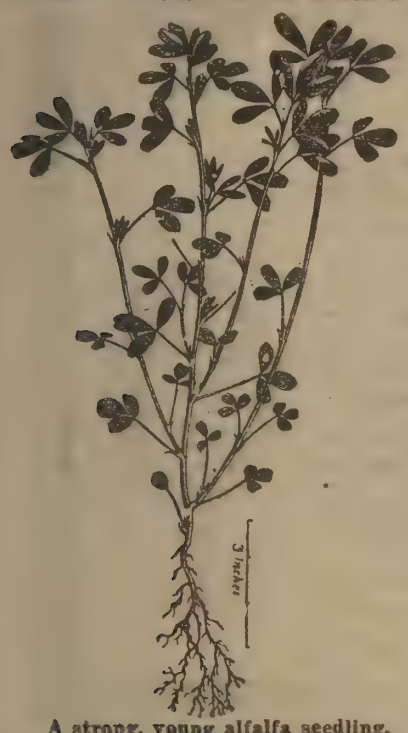
Alfalfa in the Colville Valley



Farmers of the Colville valley complain that last winter there was a more or less killing of alfalfa, with a reduction in stand, perhaps due to otner causes as well. This loss in stand varied from almost nothing to 50 per cent or more.

An investigation has been made by Professor Hegnauer, specialist in soils and crops, of the Washington State college, in cooperation with Henry J. Plumb, county agent.

In their report just issued these men find that in most fields where there was considerable loss there were spots where the alfalfa was almost totally killed, whereas in other parts of the field the stand was very satisfactory.

While Colville valley has a wide variation in soils, three types prevail, silty clay loam, muck, and sandy loam. It has been found that in the clay loam and in the muck there are occasional spots where alkali runs rather high, and is consequently injurious to growing crops, especially to alfalfa. The remedy for this is better drainage. Drainage will not only wash out the alkali, but will also lower the water table, which would make it much safer for alfalfa growing.

The silty loam soils are by far the best and safest for alfalfa growing, because the drainage is good and the roots of the

A strong, young alfalfa seedling.

plants are able to penetrate the soil to normal depth. This type of soil also gives up its plant food easily and regularly.

In the case of both the silty loam and the muck soil it would be much safer to grow clover or timothy, or a mixture of the two, than alfalfa. These poorly-drained lands afford the real problem in alfalfa growing in Stevens county.

Many of the present troubles in alfalfa in the Colville valley may be overcome by better cultural methods. There is no crop that requires greater care and attention in the preparation of a seed bed than alfalfa. The seed bed must be fine, clean and well packed with a shallow mulch on the surface. It is best to plow the ground in the fall, and if the ground is weedy, summer fallowing might be advisable.

Fall plowing and subsequent working in the early spring will help greatly in controlling weeds. It will also help in securing proper moisture conservation.

In early spring plowing it will be necessary to pack the ground after plowing with a roller, in order to approach the condition which is ordinarily brought by fall plowing. It is doubtful if spring plowing will ever do as well as plowing in the fall for alfalfa.

Under average conditions May 1 to 15 is a good time to sow alfalfa.

Unless irrigation farming is practiced, a nurse crop should not be used. On the nonirrigated lands the nurse crop draws too heavily on the moisture supply so that the alfalfa will be stunted during the early period of its growth. Moreover, when the nurse crop is harvested the hot sun strikes the young alfalfa plants too strongly and a poor or weakened stem results.

Where irrigation water is at hand it will be possible to sow about one bushel of spring wheat per acre as a nurse crop with alfalfa. The application of water must be made so as to favor the alfalfa as well as the wheat.

Good clean seed is very important in alfalfa growing. Never use old seed or seed that is infested with weed seeds. Twelve to 15 pounds per acre of good seed should, under favorable conditions, insure a satisfactory stand. The seed may be sowed either in drills or broadcasted. From one-half to three-fourths of an inch covering is ideal, provided the soil is in the right condition.

In the main it is a good practice to inoculate the soil as a matter of insurance

Weed control and winter injury are both dependent on field management. As soon as the weeds begin to appear and are of such size that they can be clipped without injury to the alfalfa—clipping should be done. If there are only a few weeds here and there it often pays to pull them by hand when the alfalfa is yet very young. This is especially true of such weeds as mustard and others of that type.

After the stand of alfalfa is once well established it will be necessary to cultivate at least once a year and sometimes more.

Early spring cultivation is recommended as soon as the soil is dry enough, so that it will work well. Use a spring-tooth harrow, alfalfa renovator, disc or even a good sharp spiked-tooth harrow. Where the weeds are abundant or where the ground is hard severer treatment is required than where conditions are more favorable. It may be necessary to give fall tillage as well as spring tillage. Where fall tillage is given a light application of manure might well be put on just before the tillage work is done.

Last winter there was more than the ordinary amount of injury to alfalfa in the Colville valley. This was doubtless largely due to severer winter conditions, which does not necessarily mean low temperature only. Rapid alternate freezing and thrawing, ice, absence of snow, severe drying winds, too much warmth on the surface or in the soil, late fall cutting or heavy pasturing—one or more of these might be contributive causes to the common injury known as winter injury.

An examination of the weakened stands in various fields showed that they are not all injured in the same way.

To reduce or avoid injury, keep the ground in good physical condition, see that water does not stand on or near the surface of the ground, keep the plants strong and vigorous by giving them a chance to make sufficient fall growth after the last cutting, and fertilize the ground whenever possible.

Careful Grading

A Help to Local Potato Market

I, Lassen of Little Rock, Thurston county, produced some good White Star potatoes last season, which run about 13 tons to the acre. He is a strong believer of the White Star as a marketable potato for his section of the county since they produce well and they sell well on the markets. As to size Mr. Lassen says that they are comparatively even, and from four tons he found only a few individuals that were oversize.

"I dug 15 tubers out of one hill that were unusually large, and weighed nearly one pound each. This, of course, was too large for general market purposes and they only grow this way where moisture and soil conditions are the very best. It shows, however, that the variety produces uniform tubers if given the right treatment.

"I am also trying a few Irish Coblers, but find that they mature a much larger potato and a few of them have hollow centers. This, of course, may be due to our own partcular soil. It is black silt loam, and it does not get as dry as some of the upland soils.

"I tried some super-phosphate on the two varieties last summer, and found that it helped them both in making a quick growth of vines. There was a difference, however, with the varieties when the leaf spot got started. The White Star withstood the disease much longer than did the other variety, which seemed to indicate that it was more resistant to diseases. There is a possibility, of course, of this being a mere chance, and it may turn out different another season."

Mr. Lassen said that he felt there was a need for careful grading since it would help to put the local potatoes on the home markets. He had, however, managed to sell the biggest part of his crops to the logging camps, which are not far from his section of the county.

Chickens and Potatoes.

There are 35 acres of cleared land on the Mike Walter farm in the Black Lake district of Thurston county. Mr. Walter is operating a diversified farm, having 2000 chickens and has nearly four acres of potatoes. Other crops include such green feeds as are needed for the chickens, and grain and hay crops.

Mr. Walter has several types of soil on his place and finds that the White Star potato is a good variety for some of the soils on the lower land. This year, however, he raised three acres of Green Mountain on upland soil and found them a fair yielder and they sold well on the local market. The Netted Gem did not produce as good results on the upland as did the White Star, but he feels that they will bring a greater return on lower land.

A novel method of grading the potatoes was used as he placed the crop into the cellar soon after digging. A long shoot was built from slats which had had the top corners rounded off. By running the potatoes down this shoot the dirt and injured tubers were removed before the main potatoes were stored in the cellar. Such a method, he said, saves much time in grading at the time the crop is sold.

SCHOOL FOR VETERINARIANS.

Early in January, probably January 9-12, inclusive, there will be held a postgraduate school for veterinarians at the State College of Washington. In cooperation with the state veterinarian societies of Oregon, Washington, Idaho and British Columbia, the college department of veterinary science is arranging plans to bring noted doctors from the east to lecture during the four days of the course.

During the annual short course for farmers at the agricultural college, January 8-March 3, there will be offered a six weeks' series of lectures on home treatment of animal ailments, including the care of sick horses, cattle, sheep and swine.

BABY BEEF CLUB FORMED.

An Aberdeen-Angus beef club has been formed in Kittitas county to be known as the Kittittas County Rosemere Baby Beef club. The club is being financed by O. V. Battles and the calves are to be purchased from the John Smithson herd. Boys now in the club are Alvo and Rodeger Pays, John Deonigi, Harry and Tow Newton and George Bliboky. H. W. Roseburg is club leader.

BEEKEEPERS SHOULD LEARN.

"Bee inspectors are a necessity under our present condition," remarked T. W. Ware, a veteran beekeeper of Puyallup. "But if each bee owner would learn to take care of his own bees we would need no inspection. There is plenty of other work for our inspectors to do and it would in no way throw them out of a job.

Prevents Rust

You should use Black Silk Stove Polish to prevent rust because it *saves* the stove as well as shines it! Rust *eats* the iron and wears it away, Black Silk Polish *protects* your stove as well as beautifies it.

BLACK SILK STOVE POLISH

gives a gloss which lasts four times as long as ordinary polish and will not rub off or dust off. It's economical, too. It won't cake in the can and you use every drop. See your dealer. He has many calls for this guaranteed polish. He will be ready.

Black Silk Stove Polish Works
Sterling, Illinois

Use Black Silk Air-Drying Iron Enamel on grates, registers, stove pipes—prevents rusting. Use Black Silk Metal Polish for silver, nickel, or brass. It has no equal for use on automobiles.

"A Shine in Every Drop"

Read the "Want Ad" page this week for good offers of all kinds.

"OILINESS"~what it means to trucks & tractors

"'Oiliness' is the ability of a lubricating oil to cling evenly to bearing surfaces, at the same time offering in itself a minimum of frictional resistance."

— *Board of Lubrication Engineers.*

"Oiliness" in engine oil can't be seen — but is *felt* when your tractor steps into full-rated draw-bar pull — is *heard* when your truck engine hums along with heavy loads.

Zerolene has "oiliness." It clings to bearing surfaces evenly, and at the same time splashes freely — you get *all* the power the engine is rated to deliver.

Stability — Purity

The ideal truck or tractor oil must penetrate easily the smallest bearing clearances at all operating temperatures — and it must have stability. Zerolene penetrates, and has the stability to resist engine heat.

The unexcelled purity of Zerolene results in a harmless deposit of carbon of a soft, flaky nature, most of which is blown out with the exhaust. Zerolene minimizes engine troubles and assures longer useful service for your equipment.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your truck, tractor or automobile.

STANDARD OIL COMPANY
(California)

more power & speed ~ less friction and wear ~ thru *Correct Lubrication*

LIVESTOCK AND DAIRY

Live Stock Reports

The United States department of agriculture announces that its new service for forecasting current live stock productions, marketable supplies and commercial movements has been organized. It will cover the corn belt and western range states and will function through state statisticians already connected with the department's crop estimate work. The cooperation of many railroads, stockyards, packing plants and producers' organizations for furnishing data has already been secured.

This live stock reporting service is part of the department's program for disseminating information of an economic character bearing on agriculture, in an effort to influence the organization of the farm business on a sound economic basis. It is believed that statistics on present and prospective live stock production, and information of current market movements, will enable producers better to correlate supply with the demand, thereby preventing gluts or shortages in supplies for consumptive purposes, and the attendant fluctuations in prices to both the producer and the consumer. The following reports are proposed to be issued from time to time:

1. Monthly reports of changes in number of live stock on farms. These reports will show the number of births, purchases, sales, farm slaughters and deaths each month on a large number of farms used as samples from which ratios of changes are determined. The reports will cover the entire country.

2. Semi-annual pig surveys will be made in March and November through rural mail carriers.

3. Monthly reports of receipts and shipments of live stock from the corn belt and western states, based upon information secured from railroads, stockyards and other sources, will be issued.

4. Other monthly reports will show the condition of live stock expressed in percentage of normal and live stock prices on the range.

5. Estimates of the number of cattle on feed will be made December 1, January 1 and possibly February 1 each year.

A number of other reports will also be made periodically.

Feeding Raw Potatoes

By A. B. NYSTROM.

Are small potatoes good feed for a cow fed raw, and, if so, what value are they as a milk producer? F. T.
The Dalles, Ore.

Raw potatoes may be fed to dairy cows in limited amounts and will take the place of other succulence. It is not wise, however, to feed over 20 pounds a day to each cow. Potatoes have a loosening effect on the bowels, and also give the butter a peculiar taste, which is objectionable. When corn silage is worth $8 per ton, I would consider potatoes worth about $5 per ton. When supplementing potatoes, be sure to feed plenty of good legume hay, such as alfalfa or clover, or if this is not available, feed a high protein grain ration.

The Babcock Test

By A. B. Nystrom.

What is the correct way to use a Babcock milk tester? S. G.
McMinnville, Ore.

The following is a brief outline of the successive steps in the making of a Babcock test:

1. Be sure the sample is properly taken, and that it is representative of the lot of milk to be tested.

2. Temper milk to between 60 and 70 degrees F. by placing jar in water of that temperature.

3. Mix the sample thoroughly by pouring from one jar to another.

4. Use a standard pipette and draw 17.6 cc of milk immediately after mixing. To measure correctly have the bottom of the curved line in the pipette even with the 17.6 cc mark.

5. Transfer to a clean 8 per cent milk test bottle, being careful to lose no milk in the transfer.

6. Mark each bottle on the etched surface before adding acid.

7. Add 17.5 cc of sulphuric acid to 1.82 to 1.83 sp. gr.

8. Acid should be about the same temperature as the milk.

9. Add the acid slowly, turning the neck of the test bottle slightly to wash down milk.

10. Mix gently with a rotary motion until all curd disappears and liquid is a dark brown color.

11. Place bottles in the centrifuge so they balance and whirl for five minutes at the proper speed. A 12-inch wheel requires 1000 revolutions and an 18-inch wheel 800 revolutions per minute.

12. After the first whirling of five minutes stop and add hot soft water, 150 to 180 degrees F., to the base of the neck.

13. Whirl again at same speed for two minutes, after which fill with hot water to about 8 per cent mark.

14. Whirl again for one minute.

15. Place the tests in hot water, 135 degrees to 140 degrees, for five minutes, making sure the water in tempering vat is as high as the fat in the neck.

16. Measure the fat column as soon as it comes from the tempering bath.

17. Measure from the extreme lower point of the fat to the extreme top of the fat column.

18. A divider with fine points makes the reading easy.

VETERINARY

By DR. S. B. NELSON.

Cow Has Cough—I have a cow that will freshen soon. She is in good shape, but coughs night and morning. F.

Try giving the cow two ounces three times daily of the following mixture: Guiacolis, four ounces; Olei Lini, one quart.

Tuberculosis of Udder—Is there such a thing as tuberculosis of the udder and what are the symptoms? Would my cows be apt to get it if cows kept on this ranch four or five years ago had it? M. B.
Morton, Wash.

Yes, cows sometimes have tuberculosis of the udder and it is the most dangerous type of tuberculosis which affects the cows as far as the transmissibility of the disease to the human race is concerned. A few of the principal symptoms are inflammation of the udder gland situated in the upper back part of the udder. Garget, which comes and goes rather periodically. If it is four or five years ago since the farm which you are on had cows on it which were tubercular, there will be no danger except possibly through the stalls where there are cracks in the floor and where it has been rather moist. There might be some little danger there. This can be overcome by thoroughly disinfecting. Disinfect that part of the stables.

Milk Fever.—I have a cow that had milk fever last time she freshened. Is she likely to get fever next time and can anything be done to prevent it? H. N.
Tonasket, Wash.

She may get milk fever again if you are feeding her heavy milk-producing rations. It would be well, if she is in pretty good shape and a heavy milker, to change the feeding 10 to 14 days before she freshens by putting her on to poor, dry hay, giving her plenty of water to drink, but cutting down on all feeds, and in order to prevent digestive trouble with this change give her one handful of epsom salts in a quart of water once daily if necessary. Of course, you must make the change slowly, taking three or four days to make it.

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.

Include

DR. HESS STOCK TONIC
in the ration

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.

WESTERN CANADA for Big Wheat Crops

Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon. Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

(Continued from page two.)

best Berkshire sow in the country. The senior and grand champion boar, Enhancer, is almost as outstanding an animal.

Judge: E. H. Hughes, University of California.

Boars: Aged boar—1, Italian Vineyard Co., Guastie, Calif., on Enhancer (senior and grand champion). Junior yearling—1 and 2, Italian Vineyard Co. on Guastie's Rival and Hazen's Rival. Senior pig—1, Oregon Agricultural college on Maybelle's Dominator; 2, Italian Vineyard Co. on Kintyre Dominator. Junior pig—1, Ashlane farms, Pleasant Grove, Utah, on Ashlane Laurel Prince (junior champion); 2 and 3, Italian Vineyard Co. on Monrack Royal Superb and Enhancer's Leader; 4, Lester Barrows, Shaw, Ore., on unnamed pig; 5, Kenneth Hinshaw, Goldendale, Wash., on unnamed pig; 6, Oregon Agricultural college on Real Dominator.

Sows: Aged sow—1 and 2, Italian Vineyard Co. on Violet Festline (senior and grand champion) and Greatwood Rose 6th. Senior yearling—1, Mrs. Charles E. Virden, San Francisco, on Festline's Rival 3d; 2, Italian Vineyard Co. on Guastie's Lady Rookwood. Junior yearling—1, 2, 3 and 5, Italian Vineyard Co. on Violet's Laddie, Lady Good's Rookwood, Violet's Lassie 2d, and Guastie's Wondrous; 4, Oregon Agricultural college on Lady Rookwood 3d. Senior pig—1 and 2, Italian Vineyard Co. on Choice Wondrous (junior champion) and Rincon's Wondrous; 3 and 4, Oregon Agricultural college on Maybelle Dustin and Maybelle Diamond. Junior pig—1, Ashlane Farms on Ashlane Laurel Princess; 2, 3 and 6, Italian Vineyard Co. on Guastie's Royal Lady 2d; Guastie's Royal Lady 4th and Guastie's Royal Lady 3d; 4 and 5, Barrows on unnamed pigs.

Aged herd—1 and 2, Italian Vineyard Co. Aged herd bred by exhibitor—1, Italian Vineyard Co. Young herd—1 and 2, Italian Vineyard Co.; 3, Oregon Agricultural college. Young herd bred by exhibitor—1, Oregon Agricultural college. Get of sire—1 and 3, Italian Vineyard Co.; 2, Barrows; 4, Oregon Agricultural college. Produce of sow—1 and 2, Italian Vineyard Co.; 3, Oregon Agricultural college; 4, Barrows.

Poland Chinas.

Four states contributed to the great show made by the Poland China breed. California, Idaho, Washington and Oregon all had representatives. But it must be admitted a couple of club boys were all who held up the Washington banner. Prizes in general were pretty well divided, although two championships went to one man and one other to his father-in-law, making three to Idaho. Liberator Wonder, the senior and grand champion boar, has about all that could be asked of a boar of his age. He is deep bodied, has great bone and a strong back. But the class of the show was the senior and grand champion sow. In fact, the junior yearling sow class, in which she was found, was sensational. About 25 head were in the ring. Not only were there no poor ones, but several of them would be rated as extreme tops anywhere. Lady Patriarch, shown by Hugh Walter of Townsend, Mont., has more size than the others without losing any quality. She has about everything that could be asked—best of bone and feet, strong back, great length and depth of body. Big classes were out in all the younger divisions, and quality was of the best.

Judge: W. L. McNutt, Ord, Neb.

Boars: Aged boar—1 and 3, Hugh Walter, Townsend, Mont., on Cooper's Choice and Big Smooth Orphan; 2, A. Buckland & Son, Fresno, Cal., on Giant Prospect. Senior yearling—1 and 3, C. K. Loe, Silverton, Ore., on Loe's Designer and Bob Clan; 2, Herbert Willard, Dayton, Ore., on Kin-Son Bob. Junior yearling—1 and 3, A. J. Firkins & Sons, Nampa, Idaho, on Liberator's Wonder (senior and grand champion) and Idaho Timm 4th; 2, Buckland & Son on The Tempest; 4, R. W. Hogg, Salem, Ore., on Black Oak; 5, J. F. Torgason, Suver, Ore., on Maplehurst Master; 6, Walter on E's Jumbo. Senior pig—1 and 2, Ambrose W. Johnson, Nampa, Idaho, on Idaho Buster 2d (junior champion) and Idaho Buster 3d; 3, M. G. Gunderson, Silverton, Ore., on G's Big Joe; 4 and 6, Walter on Liberty Bob and Bob Jones; 5, Stephen Rentz, Gervais, Ore., on Rentz's Masterpiece. Junior pig—1 and 2, Firkins & Sons on Nutwood Clan and By Gosh; 3, Gunderson on Peter; 4, Johnson on Arch Problem 2d; 5, Walter on King Liberator 2d; 6, Buckland & Son on Model Jones.

Sows: Aged sow—1, Firkins & Sons on Idaho Queen 2d; 2, Buckland & Son on Evergreen Hutch; 3, Walter on Belle W. 4th; 4, Gunderson on Giant's Goldie; 5, Willard on Flossie Wonder. Senior yearling—1 and 2, C. K. Loe on Loe's Wonder and Loe's Wonder 1st; 3, E. O. Loe, Silverton, Ore., on Lady Jones; 4, Walter on Baby Ruth. Junior yearling—1, Walter on Lady Patriarch (senior and grand champion); 2 and 3, Firkins & Sons on Idaho Queen 6th and Idaho Queen 5th; 4 and 5, Buckland & Son on Graceful Lady 1st and Miss King Kole; 6, Hogg on May Oregon Equal. Senior pig—1, Johnson on Peter's Prize Lady; 2 and 4, Buckland & Son on Show Girl and Prospect Maid; 3 and 5, Gunderson on Lady Alice and Lady Bell; 6, Oregon Agricultural College on Montana Julia. Junior pig—1, Johnson on Problem's Prospect (junior champion); 2, Walter on Hazel; 3, Buckland & Son on Maid's Model 1st; 4, Firkins & Sons on Miss Nutwood 5th; 5, Hogg on Black Oak Susie; 6, B. F. Kammerzell & Sons, Colfax, Wash., on Archdale's Best.

Aged herd—1, Firkins & Sons; 2, Walter; 3, C. K. Loe; 4, Buckland & Son; 5, Willard; 6, Hogg. Aged herd bred by exhibitor—1, Firkins & Sons; 2 and 4, C. K. Loe; 3, Walter. Young herd—1, Johnson; 2, Gunderson; 3, Walter; 4, Firkins & Sons; 5, Buckland & Son; 6, Kammerzell & Sons. Young herd bred by exhibitor—1, Johnson; 2, Gunderson; 3, Walter; 4, Firkins & Sons; 5, Hogg; 6, Buckland & Son. Get of sire—1, Firkins & Sons; 2, Buckland & Son; 3, C. K. Loe; 4, Gunderson; 5, Johnson; 6, Walter. Produce of sow—1 and 6, Firkins & Sons; 2, Buckland & Son; 3, C. K. Loe; 4, Walter; 5, Gunderson.

The Poland China Futurity.

Junior yearling boars—1 and 3, A. J. Firkins & Sons, Nampa, Idaho, on Liberator's Wonder and Idaho Timm 4th; 2, A. Buckland & Son, Fresno, Cal., on The Tempest; 4, R. W. Hogg, Salem, Ore., on Black Oak; 5, Hugh Walter, Townsent, Mont., on E's Jumbo.

Junior yearling sows—1, 2 and 5, Firkins & Sons on Idahn Queen 6th, Idaho Queen 5th and Idaho Queen 4th; 3 and 4, Buckland & Son on Graceful Lady 1st and Miss King Kole; 6, Hogg on Susie Equal.

Senior boar pigs—1 and 2, A. W. Johnson, Nampa, Idaho, on Idaho Buster 3d, and Idaho Buster 2d; 3, M. G. Gunderson, Silverton, Ore., on G's Big Joe; 4, 6 and 7, Walter on Liberty Bob, Ranger Bob and Bob Jones; 5, Stephen Rentz, Gervais, Ore., on Rentz's Masterpiece; 8, F. O. Cooper, Willow Creek, Mont., on Spotlight.

Senior sow pigs—1, Johnson on Peter's Prize Lady; 2, Buckland & Son on Show Girl; 3 and 4, Gunderson on Lady Alice and Lady Bell; 5, Oregon Agricultural college on Montana Julia; 6, C. K. Loe, Silverton, Ore., on Mollie; 7 and 8, Walter on Mildred and May Belle.

Senior litters—1, Gunderson on Long Lady; 2, Walter on Miss Jones; 3, C. K. Loe, Silverton, Ore., on Mollie Buster; 4, Herbert Willard, Dayton, Ore., on Oregona 5th; 5, Buckland & Son on Fresno Girl.

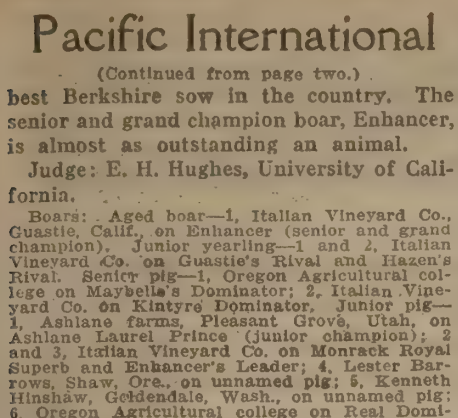
Junior litters—1, Firkins & Sons on Idaho Queen 6th; 2, Walter on Little Sweetheart; 3, Buckland & Son on Model Maid; 4, Hogg on Susie Equal; 5, B. F. Kammerzell & Sons, 6 and 7, Johnson on Idaho Bustress and Idem; 8, B. F. Kammerzell & Sons, Colfax, Wash., on Fashion's Pet.

Hampshires.

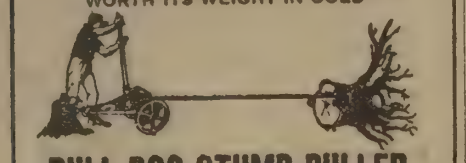
Hayes & Harter's Heart o' the Valley Farm, Grants Pass, Ore., made most of the Hampshire show. They were awarded most of the first prizes and all four championships. A few club boys and the herd of Adams Eden farm of Warren, Ore., competed with them. While all the champions are extra good Hampshires, the senior and grand champions of both sexes are of such wonderful type and quality as is seldom seen. Good feet and large bone hold up good bodies and strong backs. A peculiar circumstance is that the grand champions are litter brothers and sisters and the same is true of the junior champions.

Judge: E. H. Hughes, University of California.

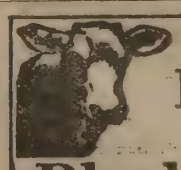
Boars: Aged boar—1, Hayes & Harter, Grants Pass, Ore., on Model's Defender; 2, Adams Eden farm, Warren, Ore., on Emergency Lad. Junior yearling—1 and 2, Hayes & Harter on Cherokee Duke (senior and grand champion) and Nehawka Masterpiece; 3, Adams Eden farm on Gen. Tipton's Duplicate. Senior pig—1, Hayes & Harter on Cherokee Roamer (junior champion). Junior pig—1, Emil Wells, Kirby, Ore., on Cherokee Pat; 2, Adams Eden farm on Dinty Moore.



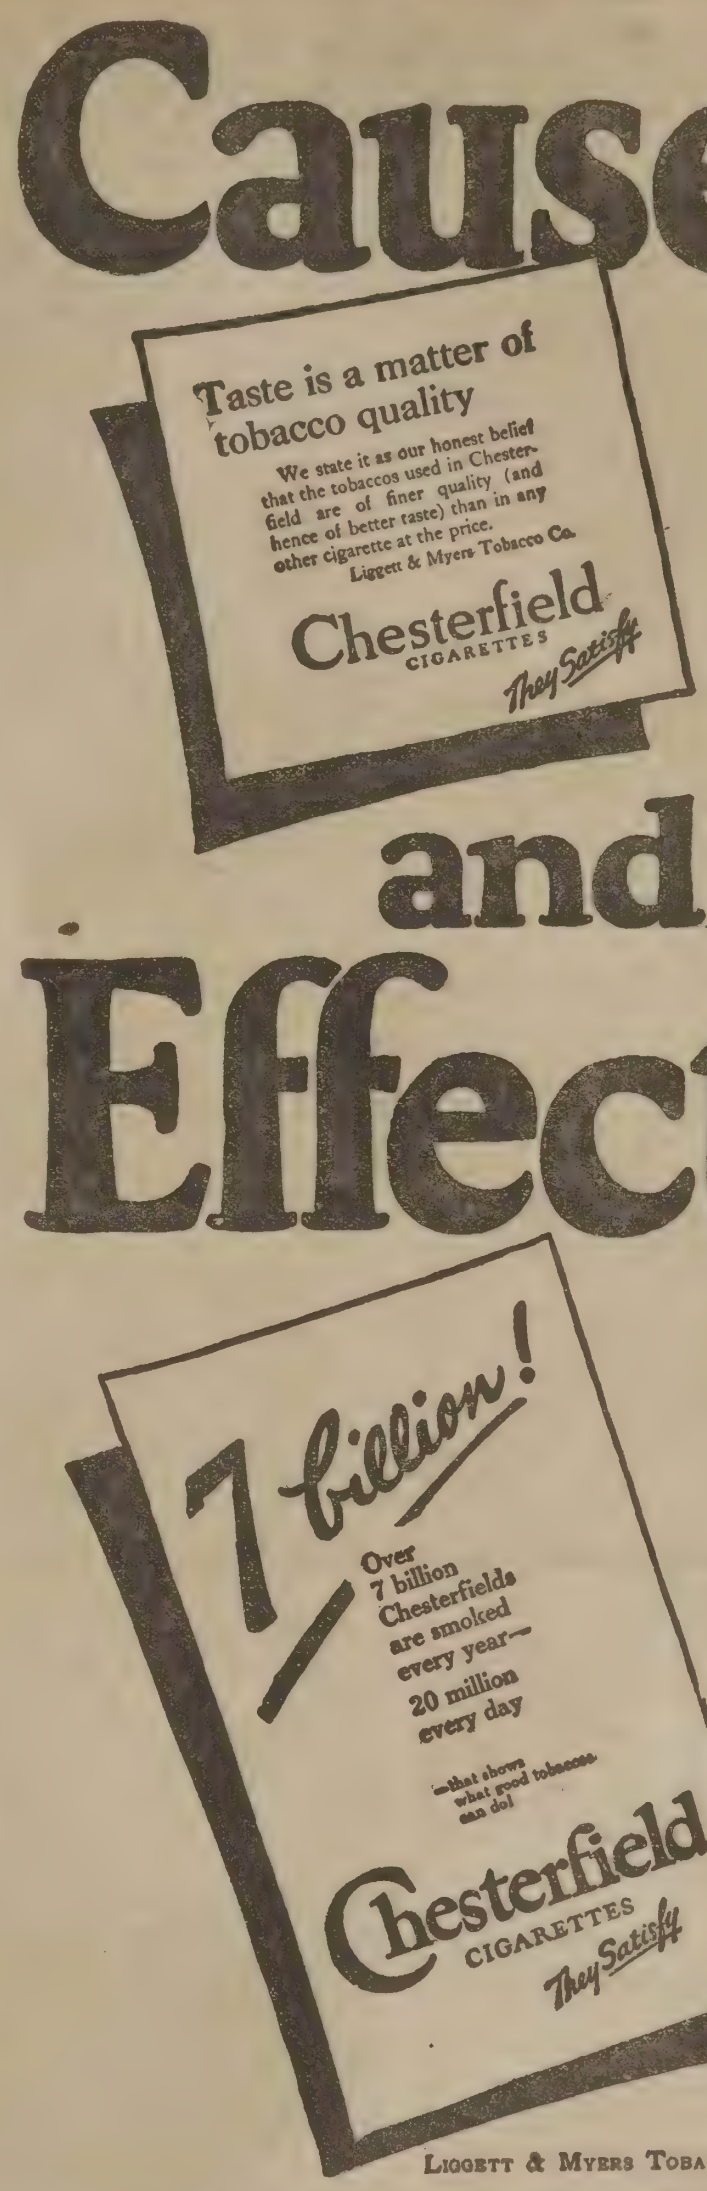
Sows: Aged sow—1 and 2, Hayes & Harter on O. U. R. Baska Tipton and O. U. R. Cantatrice; 3, Adams Eden farm on Winter Wren. Senior yearling—1 and 2, Adams Eden farm on Maggie Jiggs and Polly Perkins. Junior yearling—Hayes & Harter on Lady Princess (senior champion) and Belle Flower. Senior pig—1 and 2, Hayes & Harter on Cherokee Bonnie (junior and grand champion) and Cherokee Belladora. Junior pig—1, Ronald Tycer, Kirby, Ore., on unnamed pig; 2, Hayes & Harter on unnamed pig; 3 and 4, Adams Eden farm on Eden Pride and Eden Polly.



Aged herd—1, Hayes & Harter; 2, Adams Eden farm. Young herd—1, Hayes & Harter; 2, Adams Eden farm. Young herd bred by exhibitor—1, Hayes & Harter; 2, Adams Eden farm. Get of sire—1 and 2, Hayes & Harter; 3, Adams Eden farm. Produceof sow—1, Adams Eden farm.



THE SHEEP SHOW.



According to figures prepared by Superintendent O. M. Nelson, the sheep show was considerably larger than that of a year ago, which up to that time was the high

POULTRY AND RABBITS

Breeding Flock

Selection and Care Important

Every flock owner looks to the constant cash income week by week and by forethought arranges to have a goodly flock of pullets for the fall and winter cash income, says Mrs. George R. Shoup, poultry specialist at the western Washington experiment station. Many are disappointed in the returns from these pullets and if this low production happens year after year the owner must either find the reason therefor, or else concede that "chickens don't pay, anyway."

To remedy this disappointing condition one must first get the possibilities of the flock clearly fixed in the mind. There are two distinct branches of the work that are maintained in every well-balanced flock, and success depends upon the right handling of these two divisions. One division is the market egg producers, which include all pullets or females hatched the current season, and such older females as may be kept for market egg production. The second division is the hatching egg producers, which should include only such females as are selected as worthy of being the foundation stock of the plant.

The function of the market eggers is to bring in the cash income especially during the fall and winter, laying enough eggs this first season, if pullets, to prove themselves fit for the breeding flock, or if older birds, to help the pullets give the owner his share of revenue over cost of production.

The specific function of the breeding hens when mated to desirable males is to produce good hatching eggs from which the flock is to be renewed, and later in the season help market receipts. They have passed at least one season of laying, with presumably enough eggs to their credit to warrant their selection as breeders. They have also passed successfully through a complete molt, by these two accomplishments showing conclusively that they possess vigor enough to both lay eggs and grow feathers—two highly important functions.

When either the market egg producing flock or the hatching egg producing flock fails in its share of the work the business becomes lop-sided and shortly thereafter unprofitable. This is to say, if the market eggs are not produced while the prices are highest as well as during the rest of the year, the owner's share of the income is a disappointing quantity, often none at all, but if the breeding hens do not lay strong, fertile eggs, that hatch well and give livable chicks, the consequent supply of pullets gives out, and then the fall and winter production is gone, materially reducing the net profits of the plant. Thus it is that, whether willing to consider it so or not, the subject of selection and handling of birds that will reproduce themselves is of first importance to poultrymen everywhere.

Do not be so absorbed in the care of the fascinating pullets that the careful selection of the potential mothers is neglected. The best time to make one's choice of breeders is just before the birds begin their annual fall molt, say September and October. By handling the birds while still in lay, there is the best possible chance of forming a right opinion of the stock, and in conjunction with the trapnest record sheets which show by convenient symbols number of eggs laid, cycle of lay size of egg, color of egg, broken eggs, broodiness and toe-punch and with wing band (showing parentage), one has a nearly complete history of the bird in hand. To grade a bird as to breeding quality, slip the left hand under the keel and judge the weight (close to four pounds), look the bird square in the face to watch for head defects, such as scurvy comb, swollen eyes; grasp the beak and quickly open and look for canker of mouth and throat. Making sure that the head is healthy, judge for laying capacity. Outstanding eye, small head, medium fine comb, texture and bleached beak combine to indicate a good layer.

Next note plumage. Close, well-patterned plumage, well worn and shabby means a good worker. A hen that has kept her feathers in good show condition by the end of a laying year has neglected the nest, depending on her owner's eye for beauty to pay her bills.

The back should not only be wide at the shoulders, but long also. The nearer a long rectangle the whole back describes the longer time the bird will lay. Birds sometimes lay 16 months if hatched so they begin to lay in July.

The body depth shows how much feed a bird can use in manufacturing eggs, so that the deeper the body, with the accompanying pliability of body and skin, the better the production. The right hand does most of the work of examining, but the left hand senses the length of keel and whether or not it is crooked. Should it be kinked or crooked, it more than likely shows a heavy feeder as a growing pullet and usually a good layer. A glance at the shanks shows whether or not they are yellow and taken with the rest of the body information, bleached legs on a strong, vigorous female means a long period of lay.

This brings us to the examination of the pelvic or lay bones and fluff. Medium sized bones, pliable and spread two or three inches apart, and covered with muscle, not gristle, show a bird that will lay the next year. Pliable skin on a deep fluff—that is, a wide spread from the end of the keel or breastbone to the vent—shows ample storage room for developing eggs as well as large capacity organs of digestion.

The points that show a good breeder have thus been taken in the order in which they are seen on a bird in laying form that has every chance of becoming a good breeder, and in this short article it is deemed unwise to try to describe the varying grades below this one.

Having such a bird in hand, if her chart symbols show besides her high egg record, that she neither lays tinted eggs nor small-sized ones, nor breaks what she does lay, you have a choice bird that has laid 200 or more eggs and deserves every kindly attention needed through her next trying period, which is the full natural molt.

Shows Benefit From Culling

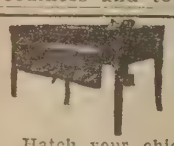
Following a culling demonstration cradried on in Mason county by W. D. Buchanan, poultry specialist of the state college, 45 hens which were culled out layed only two eggs in seven days. The remaining 160 hens laid 315 eggs during the same week.

This indicates the benefit from eliminating the poor producers and thus improving the flock. In the above instance the average lay of the hens left in the flock was increased 6 per cent, which will amount to approximately $50 for the entire year.

"If this flock had not been culled, one hen out of every five would have been kept at a loss of 85 cents per year," points out Mr. Buchanan. "The loss must be divided equally among the good producing hens, thus lowering the net income of the entire flock."

TACOMA PLANS POULTRY SHOW.

At a meeting of poultrymen in Tacoma it was decided to hold a show in that city late in December.



Charles E. Boughner was unanimously elected show secretary and will have as his assistants Ray Leftwick, Mrs. L. J. Jacobsen, Ellis Jennings, H. K. Carter and J. H. Nichols. The new secretary suggested that the English plan of poultry shows be adopted for the coming event here and the idea caught the approval of all those present

Poultry experts will give talks on correct feeding, breeding and housing for exhibition and eggs, and a big auction sale of exhibition and utility stock will wind up the show.

The western zone meet of the entire country for members of the American Barred Plymouth Rock club will be held at this show and $100 for extra premiums has been voted for this class. Other specialty clubs will be invited to hold their meets here.

KEEP POULTRY RECORD.

R. N. Miller, farm management demonstrator, says: Obtain a poultry record book from your county agent or the extension service and keep accounts.

How much sleep do you need?

IT ISN'T so much a question of the number of hours you spend in bed, as it is of the *quality* of the sleep you get. Is your sleep sound and restful, or is it fitful and unrefreshing?

One common cause of wakefulness at night is over-stimulation from coffee drinking. For coffee contains caffeine which irritates the nerves and frequently leads to insomnia.

If you have any idea that coffee keeps you awake at night, or makes you nervous, make a change from coffee to delicious Postum.

This pure cereal beverage contains nothing that can harm health, and its flavor is much like coffee. In fact, many people prefer Postum for its flavor alone.

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes. The two forms are equally delicious; and the cost is only about ½c per cup.

Postum *for Health*
"There's a Reason"

Made by
Postum Cereal Company, Inc.
Battle Creek, Mich.

Hand Power Hercules

Fastest, Cheapest Way to Clear Land

At a contest held recently in England, Hercules all-steel triple power stump puller pulled stumps faster than any other method. Quick work—low cost and one man does the job. Hand power in four speeds, single, double, triple and quadruple power. Easy to pull—quick winding cable, and other features. Horse Power Hercules is most complete, up-to-the-minute stump pulling outfit made. Write for prices and catalog—get my 1923 introductory offer.

ORCHARD AND GARDEN

Orchard Problems

By O. M. MORRIS, Head Department of Horticulture, Washington State College.

Will you kindly tell me what peaches are best suited to this section of the state, both for cannery purposes and home use? Would also appreciate a description of the following varieties? Tuscan Cling, Lemon Cling, Orange Cling, Elberta, J. H. Hale, Muir. MRS. E. L. N.
Clarkston, Wash.

I think you will find the J. H. Hale and Elberta distinctly the leading varieties for your section. The Muir is generally considered too soft a tissue and coarse grained to be highly desirable, although it is a fruit of very fine flavor.

The following brief descriptions will serve to give you, I think, most of the information needed:

Elberta: Tree vigorous, but not the most hardy. Upright and spreading, fruit matures at mid-season, large, roundish, oblong, somewhat flattened, usually with a slight blush at one side. The depression or cavity around the stem is deep. Color, greenish-yellow, changing to orange-yellow, one-fourth to three-fourths overspread with red. Mottle or even over the entire surface. Skin thick and tough. Flesh yellow stained with red near the pit. Juicy, stringy, firm but tender. Good in quality.

J. H. Hale: Tree vigorous, large, probably more hardy than the Elberta. Fruit midseason three inches long, round, regular, uniform. The apex roundish with small tip. Color, lemon-yellow, overspread with attractive dark red, showing mottles and splashes of carmen, down thin-like color. Skin thick, tuff, clings tenaciously to pulp. Flesh yellow, red around the pit, juicy, fine grained, firm, very good quality. Stone free.

Lemon Cling: This represents a general group of varieties of very similar characteristics and it is difficult to know when the true lemon cling is possessed. Tree vigorous and highly productive. The fruit large, oval, resembling a lemon form, apex terminating in a large nipple; skin deep yellow, brownish-red where exposed; flesh firm with deep lemon color, red at the stone; juicy, sprightly, very good when perfectly ripe. A perfect clingstone—ripens late.

Orange Cling: Tree, medium vigor, fruit large, round with distinct suture. Skin deep orange with dark red cheek. Flesh dark yellow, firm, juicy. Medium quality. Season about the same as Lemon Cling. This variety is seldom as well worth planting as the Lemon Cling.

Grafting of Chestnuts.

What kind, or kinds of oak—white or black—can chestnuts be grafted onto successfully? L. A. M.
Riddle, Ore.

It is not at all probable that you could succeed in grafting chestnuts upon any oak. The common Quercus Prinus, or chestnut oak, more nearly resembles the chestnut than any other, but they belong to an entirely different genus and it is not at all probable that you will get as much as one in one hundred to grow. The common kinds of chestnuts may be grafted or budded on another, but the white or black oaks are very different in tissue and growth habits from the chestnut.

Blossom End Rot

By F. D. HEALD, Plant Pathologist, Washington State College.

For several years my summer squash have been a disappointment. The plants have been very thrifty with a profusion of blossoms, but when the little squash get from three to five inches long they begin to wither at the blossom end. When the weather becomes cool in the fall they do not seem to be affected. I think something must sting them, but I do not know a remedy.

I also wish to ask the cause and remedy of tomatoes having a black spot or decaying on the end opposite the stem. They seem to be affected more seriously on the west side of the mountains than here, where it is dry. Sometimes the green ones are affected, but more frequently it is the ripe ones. MRS. A. W.
Wenatchee, Wash.

I believe it will be better to consider the tomato disease first, since the discussion of this trouble will perhaps throw some light on the squash disease. Your tomatoes apparently were affected with the nonparasitic disease known as blossom end rot. I will give you a quotation from one of our textbooks on plant diseases which will give you a summary of information concerning the nature of this trouble and the conditions which seem to favor it. The writer makes the following statement:

"Blossom end rot, also known as point end rot, may be found wherever tomatoes are grown. It is a disease of the fruit only. In some seasons 50 per cent or more of the fruit crop is ruined by it. It seems to be serious in dry weather and on light soils.

"Symptoms.—Infection is manifested as a watersoaked spot at the blossom end of the fruit. The size of the spot may be that of a pinhead, or it may spread so rapidly as to involve half of the tomato. A few days later the water-soaked spot becomes black and leathery and ceases to make further progress.

"Plants subject to frequent slight wilting produce a greater number of defective fruits. There seems no doubt but that the water supply in the soil is an important factor in limiting or increasing blossom end rot. The factors of drainage and cultivation are, therefore, important considerations. Although dry soils and drought favor the increase of the disease, the state of health of the plant itself seems equally important.

"The use of fertilizers, too, seems to influence the trouble. Heavy applications of manure or of potash seem to increase the rot, as do fertilizers in the form of ammonium compounds. This is especially true on sandy loams. On the other hand, nitrate of soda or lime acts as a check. In controlling blossom end rot the moisture of the air in the greenhouse seems also an important factor. On bright, sunny days, it is not advisable to keep the air dry. However, care should be taken not to keep the air of the house dry during the night, as this encourages numerous fungous diseases."

It is my opinion that the trouble affecting your summer squash was of a nature very similar to the blossom end rot of the tomato. We have no specific information concerning blossom end rot of this plant, but I have seen a similar trouble in watermelons. In order to make positive identification, it would be necessary that diseased specimens be sent to us for examination.

Fruit Growers Up in Arms

The Wenatchee apple growers are up in arms. They are no longer satisfied with the action of shippers and traffic associations. Four hundred of these growers, represented by delegations from every fruit growing section in the Okanogan and Columbia river valleys from Oroville to Wenatchee, assembled in Wenatchee, warmly discussed the situation and adopted the following resolutions:

(1) Support of the Wenatchee Southern railway and the furtherance of this project for the relief of the fruit industry by petitions to the interstate commerce commission bearing the names of every grower in north central Washington.

(2) Enlisting the aid of the department of public works of this state, the governor and the people in other communities of the state of Washington in the problem of saving the fruit industry of this part of the state.

(3) Opening of the Spokane gateway to the more southerly routes to the markets of the east for the purpose of securing immediate relief in the situation.

On the motion of I. A. Van Valkenberg, a resolutions committee was appointed and withdrew to frame resolutions after there had been a general discussion of the problems in the meeting.

Packing Apples on Farm

The Yakima valley reports that more apples have been packed on the farm this year. By packing at home the growers claim that they save 25 per cent of the haul charge to the city, for the apples as they come out of the orchards in loose boxes pack out 75 per cent and it costs as much per box to haul loose in the box as packed.

In some instances a few growers have cooperated in the packing and also in the picking. Four members of the horticultural union in Fairview, Ed Remy, Clarence Starcher, Sam Kelsay and C. L. Miller, have employed the same picking crew, managed by one of them, for picking the apples of the group. One of them superintended the packing.

The arrangement has worked out well in all respects, and they have made a very matrial saving, besides the work of harvesting has proceeded more smoothly and more economically. The crew has picked each variety of apples in turn in each of the four orchards.

Protecting Bees in Winter

"The best way to protect bees for the winter is to cover the hives with building paper in order to keep out all moisture," said J. W. Peterson, a well known beekeeper in the Edgewood district near Puyallup. "Last year I covered one hive in this manner, and the bees did so well that I decided to pack every hive this way for the next winter. There was very little dampness and no mold.

"The top board is given a similar cover with the edges folded down in order to shed all rain. It is a good plan to pack the top super with burlap, or other dry material to keep the colony warm. I have estimated that it takes approximately six feet from a roll of building paper to cover one hive. At this rate the whole apiary can be protected at a very nominal cost."

Mr. Peterson has 60 colonies of bees, which he is carrying over winter, and plans on keeping all colonies strong and in a healthy condition to begin work when the honey flow starts next spring.

GENERAL ADVERTISING.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Lifelong Trapper

Adventures of R. A. Lewellen

Robert A. Lewellen lives near Bend, in eastern Oregon. He was in Portland the other day, disposing of his furs. "I have lived in Oregon since 1911," said Mr. Lewellen to Fred Lockley of the Oregon Journal.

"I was born in Texas 42 years ago. My father was born in Scotland. Before coming to Oregon I trapped in the Lolo Pass country and on across the Rockies into Idaho, and on the McGruder fork of the Clearwater. When I came to Oregon I trapped on the headwaters of the Minam and in the Looking Glass country.

"When I was 6 years old we moved from Texas to Montana. In 1907 I went to Alaska, intending to try my luck mining, but I found I could make more money with my gun and my traps, so I put in four years in the Yukon district, trapping martens, minks, wolverines, lynxes, and blue, silver, cross and black foxes. I got $1100 for black fox pelts from a fur buyer at Atlin. I ran a 100-mile trap line, having nine cabins on the line. It took me from six to nine days to cover the trap line. In addition to the smaller animals I have mentioned I also killed 12 grizzlies and a large number of other bears. I used a .32 special Winchester with a soft nosed bullet that tore a large hole as it came out.

"The biggest bear I got was an old grizzly that weighed 1400 pounds. The most dangerous bear in the Yukon country is the black bear with a white face. They lack poise, have an ugly disposition and will fight at the drop of a hat, or they will fight because you don't drop it. If one of these bears smells you he will beat it, but if he sees you he seems to lose his temper and comes for you. They are not large bears. They weigh 200 to 250 pounds, but they are nasty scrappers. What is called the glacier bear—the light gray bear—is quite inoffensive and good-natured. They ignore you if you will do the same by them. The cinnamon bear will also attend to its own business if you do likewise, except the female cinnamon when she has cubs. In that case she frequently attacks you.

"If you want to continue a good life insurance risk never shoot a bear in the head, particularly if it is looking toward you. The shape of the skull causes your bullet to glance, and the flesh wound helps to give the bear a nasty disposition. Shoot just behind the foreleg and rather low. A grizzly can carry a lot of lead. I have put seven bullets into a grizzly before I stopped him.

"I use 175 to 300 traps. On one line in Alaska I got on one trip 15 martens, three foxes and two lynxes, but that was unusual. Sometimes you will find every trap empty or a few of them sprung and no animal there. Since 1914 Bend has been my headquarters. I started a fox farm on Little Lava lake, 50 miles west of Bend. I sold it about a year and a half ago. I caught some martens alive and put them into a wire stockade, intending to run a marten farm, but I decided there was more money catching them out in the hills than in raising them. I have nine cabins and run a 100-mile trap line. That is a very wild country up there and hunting and trapping will be good for a long time to come.

"Up where I am I catch martens, foxes, minks, otters and occasionally I get a timber wolf or a cinnamon bear. I have two headquarters camps, one at each end of the trap line. I use snowshoes all winter for travel, for the snow lies deep in the mountains there all winter. I use a little oil of anise seed to advertise the bait. The animals have keen noses and smell it a long distance. I kill a few deer in the fall and hang them up for my winter meat. With my gun, revolver, bait and a few traps I usually carry about a 40-pound pack. Sometimes to my great disgust I catch a skunk. I see lots of deer and elk, but I kill game for meat only, so I leave them alone."

Consumption of Fresh Fruits

It is a matter of encouragement to the berry growers of the Puyallup and Sumner Berry Growers' association that the final returns on fruit shipped for fresh consumption has been greater during 1922 than the previous season. Red raspberries brought an average price of $2.18 per crate, which is considered a good figure since in other parts of the United States fruit rotted on the vines.

Loganberries brought a 7-cent average per pound, a better price than growers in other sections realized. Fresh loganberries brought $2.03 as the season's average.

Red currants averaged $1.53 per crate, while black currants were $1.86. The Blackcap raspberries, which always sell at a premium, brought $3.04 per crate as the average price for the season. The prices per pound on other fruits were: Gooseberries, 6 3-4 cents; Royal Ann cherries, 7 1-2 cents; sweet cherries, 6 cents; sour cherries, 8 cents; Bartlett pears, $30 per ton; prunes and plums, $30.

Although some of this season's crop of strawberries and blackberries are on hand as barreled fruit, W. H. Paulhamus, president of the association, feels that there will be little, if any, of this product being carried over the winter.

CONSERVE THEIR ENERGY.
Warm the water for the chickens.

How to Judge the Cost of a Boot

Don't judge the cost of a boot by the initial outlay. It's the wear per dollar that counts.

A cheap pair that lasts only one year is more expensive in the long run than a better pair that lasts several years.

All Pure Virgin Rubber

Goodyear Gold Seal boots, made of pure virgin rubber, will outwear ordinary boots. They are crack proof! Reinforced at the vital points, they withstand the daily use on the farm as no other boot can. They outlast ordinary boots in the acids and the alkalies of the farm yard. Our red-soled "manure" boot is made especially for farmers.

Good stores all over the northwest sell Gold Seal boots—Gold Seal oiled clothing, too. Always look for the Gold Seal label.

This is the one Gold Seal label—it's round and gold colored. A guarantee of a virgin rubber boot, crack proof boot that will give you most wear per dollar.

We are the original and only
Goodyear Rubber Co.
Portland and San Francisco.
No connection with any other firm using the name "Goodyear."

Goodyear
GOLD SEAL BOOTS
Authorized since the 70's to use the name of Charles Goodyear, inventor of vulcanizing.

Pacific International

(Continued from page eleven.)

water mark for the Pacific International. Pens were crowded, the tablation showing a total of 550 head of breeding sheep, as compared with 465 head last year, a gain of 18 per cent, while fat sheep showed only a slight increase. Romneys made the greatest gain, the increase from one exhibitor with 12 entries, to three breeders and 34 entries, registering 183 per cent. Cheviots and Leicesters both made big gains, but their numbers still are small, and Shropshires and Rambouillets must be credited with contributing the greatest increases of any of the major breeds. Nine exhibitors of the former showed 88 head, as compared with seven showing 61 in 1821, a 44 per cent gain, and five of the latter showed 77 head, as compared with three showing 53, a 45 per cent gain. Shropshires led in numbers, with Rambouillets second and Hampshires third. The grand total for all sheep was 589 head, compared to 502 head in 1921.

Short and Medium Wools.

As for quality, the judge declared the Shrop show one of the four best in the entire country, and later extended this to include all of the short and medium wool breeds which he judged except Cheviots and Oxfords. He ranked the exhibition with those at the Ohio, Illinois and Wisconsin state fairs, but said that it would hardly equal that at the International. The Canadian government flock he declared the best that he had ever seen.

Judge: W. C. Coffey, St. Paul, Minn.

Hampshires.

TECHNOLOGY

Y. M. C. A. BLDG.
PORTLAND, ORE.

Coarse Wools.

The largest show of long wools was by the Lincolns, which maintained a good standard of quality. There was a splendid show of Cotswolds, though competition was limited to two exhibitors, and there were a few very high class English Leicesters. The representation of Border Leicesters was only fair. Oregon breeders were the only ones exhibiting Romneys, but their entries were illuminating as to the quality prevailing among the flocks of this section, and the improvement in this department was a matter for congratulations.

Judge: C. L. Hawley, Portland, Ore.

Lincolns.

Rams: Aged ram—1, William Riddell & Sons, Monmouth, Ore. (champion); 2, University of Idaho; 3, Clow Bros., Independence, Ore.; 4, Corriedale Sheep Co., Hollister, Cal. Yearling ram—1, Clow Bros.; 2 and 3, Riddell & Sons; 4, A. C. Stewart, Aldergrove. Ram lamb—1 and 4, Clow Bros.; 2 and 3, Riddell & Sons; 5, William Riddell Jr., Monmouth, Ore.

Ewes: Aged ewe—1 (champion), and 3, Clow Bros.; 2 and 4, Riddell & Sons; 5, Riddell Jr.; 6, Stewart. Yearling ewe—1 and 4, Clow Bros.; 2, University of Idaho; 3 and 5, Riddell & Sons; 6, Stewart. Ewe lamb—1 and 4, Riddell & Sons; 2 and 3, Clow Bros.; 5, Riddell Jr.; 6, Stewart.

Flock—1 and 3, Clow Bros., 2 and 4, Riddell & Sons; 5, Stewart. Flock bred by exhibitor—1 and 3, Clow Bros.; 2 and 4, Riddell & Sons; 5, Stewart. Pen of lambs—1, Clow Bros.; 2, Riddell & Sons. Pen of lambs bred by exhibitor—1, Clow Bros.; 2, Riddell & Sons. Get of sire—1 and 4, Riddell & Sons; 2, Clow Bros.; 3, Stewart. Produce of ewe—1, Riddell & Sons; 2 and 4, Clow Bros.; 3, Stewart; 5, Riddell Jr.

Cotswolds.

Rams: Aged ram—1 (champion), and 3, William Riddell & Sons, Monmouth, Ore.; 2 and 4, D. J. Kirby, McMinnville, Ore. Yearling ram—1 and 2, Kirby; 3 and 4, Riddell & Sons. Ram lamb—1 and 2, Kirby; 3 and 4, Riddell & Sons.

Ewes: Aged ewe—1 (champion), and 4, Kirby; 2 and 3, Riddell & Sons. Yearling ewe—1 and 2, Kirby; 3 and 4, Riddell & Sons. Ewe lamb—1 and 3, Kirby; 2 and 4, Riddell & Sons.

Flock—1 and 3, Kirby; 2 and 4, Riddell & Sons. Flock bred by exhibitor—1 and 3, Kirby; 2 and 4, Riddell & Sons. Pen of four lambs—1 and 3, Kirby; 2 and 4, Riddell & Sons. Pen bred by exhibitor—1 and 3, Kirby; 2 and 4, Riddell & Sons. Get of sire—1 and 3, Kirby; 2 and 4, Riddell & Sons. Produce of ewe—1 and 4, Riddell & Sons; 2 and 3, Kirby.

Romneys.

Rams: Aged ram—1 and 2, William Riddell Jr., Monmouth, Ore., 3 and 4, McCaleb Bros., Monmouth, Ore. Yearling ram—1 and 2, Riddell Jr.; 3 and 4, McCaleb Bros. Ram lamb—1 (champion), and 2, Riddell Jr.; 2 and 4, McCaleb Bros.

Ewes: Aged ewe—1 and 2, Riddell Jr.; 3 and 4, McCaleb Bros.; 5 and 6, Russell Alsip, Monmouth, Ore. Yearling ewe—1 (champion), and 2, Riddell Jr.; 3, McCaleb Bros. Ewe lamb—1 and 2, Riddell Jr.; 3 and 4, McCaleb Bros.; 5 and 6, Alsip.

Flock—1, Riddell; 2, McCaleb Bros. Flock bred by exhibitor—1, Riddell Jr.; 2, McCaleb Bros. Pen of 4 lambs—1, Riddell Jr.; 2 and 3, McCaleb Bros.; 4, Alsip. Pen bred by exhibitor—1, Riddell Jr.; 2 and 3, McCaleb Bros. Get of sire—1, Riddell Jr.; 2 and 3, McCaleb Bros.; 4, Alsip. Produce of ewe—1, Riddell Jr.; 2, McCaleb Bros.; 3, Alsip.

Flock of 1 ram and 2 ewes with 1922 lambs (Romney association special)—1, Riddell Jr.; 2, McCaleb Bros.

Border Leicesters.

Rams: Aged ram—1 (champion), and 3, Corriedale Sheep Co., Hollister, Cal.; 2, E. F. Hubbard, Corvallis, Ore. Yearling ram—1 and 2, Hubbard. Ram lamb—1 and 2, Hubbard.

Ewes: Aged ewe—1 (champion), and 4, Corriedale Sheep Co.; 2 and 3, Hubbard. Yearling ewe—1 and 2, Hubbard. Ewe lamb—1 and 2, Hubbard; 3, Corriedale Sheep Co.

Flock—1 and 2, Hubbard. Pen of 4 lambs—1, Hubbard. Get of sire—1 and 2, Hubbard. Produce of ewe—1, Hubbard.

Leicesters.

The Corriedale Sheep Co., Hollister, Cal., the only exhibitor except of one yearling ram shown by E. F. Hubbard, Corvallis, Ore., received all awards in a fairly well filled class, receiving championships on aged animals. Hubbard received first on his yearling ram.

THE GOAT SHOW.

To round out a show which should be representative of the live stock industry, the goat show was quite complete. Not only were there mohair and milch goats, but the former were shown with both long and short hair. Not quite as many were shown in either class as a year ago, but the division was fairly full and a most representative lot of animals were shown.

Angoras.

Five exhibitors made up the short hair Angora show. William Riddell & Sons were the largest exhibitors, with 29, while R. W. Hogg had 22 and Guthrie Brothers, 18. McCaleb Brothers had about half a dozen. Practically all the entries were excellent and the competition was frequently very close.

Only two exhibitors showed long haired goats. The length and fineness of hair shown was not only a tribute to the humble Angora, but to the climate which will so easily allow of carrying him over without shearing.

Judge: Thomas Brunk, Salem, Ore.

Angora Goats—Short Mohair.

Bucks: Aged buck—1 (champion) and 2, William Riddell & Sons, Monmouth, Ore.; 3, Guthrie Bros., Dallas, Ore. Yearling buck—1 and 4, Riddell & Sons; 2 and 3, Guthrie Bros.; 5 and 6, R. W. Hogg, Salem, Ore. Buck kid—1 and 3, Gurthrie Bros.; 2 and 4, Riddell & Sons; 5 and 6, Hogg; 7 and 8, McCaleb Bros., Monmouth, Ore.

Does: Aged doe—1 and 2, Riddell & Sons; 3 and 4, Guthrie Bros.; 5 and 6, Hogg. Yearling doe—1 (champion) and 4, Riddell & Sons; 2 and 3, Guthrie Bros.; 5 and 6, Hogg; 7 and 8, McCaleb Bros. Doe kid—1 and 4, Guthrie Bros.; 2 and 3, Riddell & Sons; 6 and 7, Hogg; 5 and 8, McCaleb Bros.

Four head—1 and 3, Riddell & Sons; 2, Guthrie Bros.; 4 and 5, Hogg. Four head bred by exhibitor—1 and 3, Riddell & Sons; 2, Guthrie Bros.; 4 and 5, Hogg. Pen of four kids—1, Guthrie Bros.; 2 and 3, Riddell & Sons; 4 and 6, Hogg; 5, McCaleb Bros. Pen of four kids bred by exhibitor—1, Guthrie Bros.; 2 and 3, Riddell & Sons; 4 and 5, Hogg. Get of sire—1 and 3, Riddell & Sons; 2, Guthrie; 4 and 5, Hogg; 6, McCaleb Bros. Produce of doe—1, Guthrie Bros.; 2 and 3, Riddell & Sons; 4 and 5, Hogg. Flock—1, Riddell & Sons; 2, Guthrie Bros.; 3, Hogg.

Angora Goats—Long Mohair.

Bucks: Aged buck—1 and 3, Riddell & Sons; 2, Guthrie Bros. Yearling buck—1 (champion) and 2, Riddell & Sons; 3 and 4, Guthrie Bros.

Does: Aged doe—1 and 2, Riddell & Sons; 3, Guthrie Bros. Yearling doe—1 (champion) and 2, Riddell & Sons; 3, Guthrie Bros.

Three head—1 and 2, Riddell & Sons; 3, Guthrie Bros. Three head bred by exhibitor—1 and 2, Riddell & Sons. Get of sire—1 and 2, Riddell & Sons. Produce of doe—1, Riddell & Sons. Flock—1, Riddell & Sons.

Milch Goats.

Toggenburgs, Seamens and Nubians were all represented in the milch goat classes, with one exhibitor in each of the first two named and three with Nubians and grades. Those who know milch goats say the entries contained some outstanding animals, but that as a whole the exhibit was of only average quality. A special class of grand champion for all breeds was made and kids won in both classes. Cordano's Chief, Joe Cordano's buck champion, is a kid of fine Toggenburg type and good size. The grand champion doe, owned by L. E. Wornom, is not only a kid of splendid Saanen type, but has the distinction of giving some milk without being bred. Her dam is a doe of some fame as a milker and the kid gives much promise of being a worthy follower in her mother's footsteps.

Judge: Dr. C. P. DeLangle, Yountville, Cal.

Purebred Toggenburgs.

Joe Cordano, Portland, the only exhibitor, won the following awards: Buck kid—1 on Cordano's Chief (champion). Aged doe—1 and 2 on Wanetta Teal (champion) and Antonette. Two-year-old doe—1 on Alyse of Hazel Dell. Doe kid—1 on Cordano's Flora.

Purebred Saanens.

L. E. Wornom, Vancouver, Wash., the only exhibitor, received the following awards: Aged buck—1 on Mack (champion). Yearling doe—1 on Fisk's Princess Victoria. Doe kid—1 on Victoria Franz 2d (champion).

Purebred Nubians.

Bucks: Two years or over—1, J. Murphy, Portland, Ore., on Dandy Dick (champion). Yearling buck—1, E. L. Lane, Portland, Ore., on Mt. Mellick Leonard. Buck kid—1, L. E. Wornom, Vancouver, Wash., on Sir John Chandos.

Does: Yearling doe—1, Murphy on Beauty Brown; 2, Wornom on Nona M.; 3, Lane on Mt. Mellick Cleopatra. Doe kid—1, Murphy on Beauty Lilly (champion); 2 and 3, Lane on Mt. Mellick Princess May and Mt. Mellick Lady Betty.

Registered Grade Does.

Two years or over—1 and 2, J. Murphy, Portland, on Banzai Vesta and La Vesta Lores; 3, E. L. Lane, Portland, on La Vesta Ruth; 4, Maney & McGuire, Portland, on Margarita of Glenhaven. Yearlings—1, L. E. Wornom, Vancouver, Wash., on Reindeer Wornom; 2 and 3, Maney & McGuire on Drusilla of Glenhaven and Adeline of Glenhaven; 4, Lane on Mt. Mellick Goldie. Doe kid—1 and 2, Maney & McGuire on Arlaine of Glenhaven and Elaine of Glenhaven; 3, Lane on Mt. Mellick Augusta.

THE FAT STOCK SHOW.

Fat Cattle.

Shorthorns (purebred, grade or cross-bred steer): Senior yearling—1 and 3, University of Idaho on His Majesty (champion) and Ringleader; 2, Foothills Farms, Carlton, Ore., on Craigielea Jock. Junior yearling—1, University of Idaho on Chinook Lad; 2 and 3, State College of Washington on Cumberland's Renown and Chinook Gift; 4 and 5, Northwood Farm, Redmond, Wash., on Northwood Bellboy and Northwood Knight. Senior calf—1 and 3, University of Idaho on Idaho Masterpiece and Silver Model; 2, State College of Washington on Topsman's Type. Junior calf—1 and 3, Foothills Farms on Craigielea Jock 1st and Craigielea Jock 2d; 2, University of Idaho on Hercules Benefactor; 4, State College of Washington on Jim 2d; 5, T. J. Bannen, Shedd, Ore., on Klansman. Herd of three—1 and 2, University of Idaho; 3, Foothills Farm; 4, State College of Washington.

Herefords (purebred, grade or cross-bred steer): Junior yearling—1, A. H. Barnum, Morrow, Ore., on Carlos Model; 2 and 4, University of Idaho on Deserter and Ideal Bonnie; 3, Methow Valley Live Stock Co., Winthrop, Wash., on Mystic Lad 3d. Senior calf—1 and 3, University of Idaho on Idaho Sensation 2d (champion) and Idaho Defender; 2, State College of Washington on Washington Model; 4 and 5, Platt Bros., Genesee, Idaho, on Council and Beau Type 12th. Junior calf—1, University of Idaho on Everlasting. Herd of three—1, University of Idaho.

Aberdeen Angus (purebred, grade or cross-bred steer): Senior yearling—1, Congdon & Battles, Yakima, Wash., on Antler C. B. 4th (champion). Junior yearling—1, J. A. Scollard, Chehalis, Wash. Senior calf—1, State College of Washington on Queenman of Washington; 2

WRITE FOR PREPAID PRICES ON NURSERY stock; especially apple trees; can save you money. Lawson Nursery, Gates, Ore.

STRAWBERRY PLANTS, $5 1000; NINE VArieties. Briggs Fruit Ranch, Olympia, Wash.

FARM LANDS FOR SALE 651

PAYING FARMS FOR SALE—160-ACRE farms, improved or unimproved; 30 to 160 acres irrigable land on each parcel; near Lethbridge, in sunny southern Alberta; $15 to $35 an acre. No pioneering. Well settled country. Good roads, railways, schools, telephones, agreeable social conditions; fertile land—success of irrigation farming already demonstrated. Irrigation system now being constructed under government supervision. Water available in 1923. Write for information concerning crops grown and description and location of farms to the Province of Alberta, Irrigation Council, 12 Provincial bldg., Lethbridge, Alberta.

DO YOU WANT A HOME IN A RICH IDAHO valley near Spokane, on three transcontinental railroads, where soil is perfect, rainfall ample, summers cool, winters moderate—the kind of stump land that pays to clear? Timothy and clover green eight months in the year; natural stock country. Land cheap; 10 yearly payments at 6 per cent. Humbird Lumber Co. Box 5, Sandpoint, Idaho.

160 ACRES, GOOD BUILDINGS, WELL, creek, $16,500; $7000 down. William Helmig, Rt. 1, Molalla, Ore.

FARM LANDS FOR SALE (Continued) 651

ALFALFA AND FRUIT LAND FOR SALE— Would you be interested in owning a farm in the fine alluvial soil of the San Joaquin county, in the heart of the dairy and fruit center, ½ mile from fine grammar school, three miles from big high school, and three miles from railroad center, connecting with all of the larger markets, where people are making fortunes in grapes and dairies? 800 acres of this fine land, with lots of water, is being subdivided into small farms putting on house, barn, tank house and irrigation plant, all ready for occupancy. You can be the lucky owner of one of these farms for a small payment down, six per cent on all deferred payments, and contract to extend over a period of nine years. The owners will do more than the above development and help finance orchards, vineyards, alfalfa or purchase dairy cows. For further information address owner, F. F. Copp, 430 E. Mariposa st., Stockton, Cal.

1900-ACRE IMPROVED CALIFORNIA FARM in high state of cultivation; accept up to $60,000 in part trade, some cash, long time on balance. Splendid proposition for subdivision. Adjoining property being subdivided and selling at $275 to $300 per acre.

5000 acres improved Oregon stock ranch; full equipment horses and machinery; 250 cattle, 50 hogs, 100 sheep. $25,000 will handle. A real buy.

Have several choice mixed dairy, fruit and chicken farms in the famous Willamette valley, also some fine Canadian farms to exchange for properties in Oregon, Washington and Idaho. Arch T. Penwarden, farm land specialist, 806 Lewis bldg., Portland.

FOR SALE—ON THE COQUILLE RIVER, Coos county, Ore.; a ranch of 500 acres, located on the Roosevelt highway, which will be completed in 1924, through ranch; 130 acres of river bottom land, 100 acres of which is under plow and ditched; 160 acres of upland pasture and suitable for raising hay; 100 acres of timber land and all the land on ranch is fertile and productive; bungalow house, barn, modern, size 72x80 ft. This is a very choice location and a fine ranch. We are in the mercantile business and wish to sell to have more working capital. For prices and terms address Sweet Bros., Langlois, Ore.

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane; on hard-surfaced highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising, with Spokane markets and creamery near at hand. Will help the man who will live upon this land and agree to clear a part each year by giving lumber to help start his buildings, and a purebred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

TEN TO FORTY ACRE TRACTS OF MY OWN land in Macleay-Lindsay irrigation district, Clallam county, Wash., containing 7350 acres fine, level land, rich soil; Olympic highway runs through; railroad in center. $175,000 being spent on irrigation system at cost of $24 per acre; annual cost of water less than $2 per acre; work guaranteed to June 1, 1923, when ditches will be completed. $10 per acre cash, balance on or before ten years at purchaser's option. Write for particulars. J. W. Lindsay, Port Angeles, Wash.

160 ACRES; ON IMPROVED ROAD; 15 CATtle, 100 poultry, crops from acre potatoes, 15 a. oats, 35 a. wheat, hay, stove wood, 3 horses, colts, cream separator, implements, tools, etc.; substantial winter income; pleasant home, prosperous future; developments rapid; schools, stores, advantages, city markets; 120 acres black loam tillage, 35-cow pasture, wood lot; good 6-room house, porch, barn, granary, poultry house, etc. Retiring. Low price, $5300 takes all, part cash. L. H. Newville, Wetaskiwin, Alta, Can.

MUNICIPAL LANDS FOR SALE BY THE DISTrict; no agents, no commission; interested only in getting home-builders on the project. Longest growing season in the northwest. Gardens and fruits thrive; schools, highways and railroads the best. Junction Snake and Columbia rivers. Write for terms and folders. Address Burbank Irrigation district No. 4, Burbank, Wash.

BIG LUMBER CO. LAND SALE IN SKAGIT county; 40 acres, $1400; 20 acres, with new house, $1500. Lumber furnished for building. Lots of work for the settler; splendid district, roads, schools and towns. H. C. Peters, 726 3d ave., Seattle.

CHAPTER TWENTY-TWO.

Climbing Over the Snowy Range.

Now the party began hasty preparations. Two or three of them, each carrying a blazing stick, went off a hundred yards or more into the woods till they came to where a big log had rotted. There they picked up several pine knots and returned to camp with them. When those had been hacked on the end and lighted they made good torches.

Now, leaving Cooper to guard the camp, five of the party, accompanied by Frisk, set off through the woods. Each was carrying a gun in one hand and a lighted pine knot in the other.

After moving across the cow's course till they could pick up the trail they turned and followed it as fast as they could. And that dragging bush had swept a rather plain path. Two of the party walked in front, with their pine knots held low, so as to show the pine needles had been recently swept. They followed the trail almost as fast as they could walk. Now they all moved on steadily through the forest.

Before they had been long away from the cheerful warmth of their camp fire, they found in the night air a suggestion of those near-by snow fields. Most of them were now shivering, partly from cold and partly at the thought of coming upon that ferocious grizzly again, or another one just as ferocious.

"I'll feel lots safer when we get out of this," Givens now said. "Makes my blood run cold when I think how easy it would be for a mountain lion to flop right down on top of us from some overhanging limb; or for a grizzly to come tearing out of the dark and kill two or three of us before we could shin up these tall pines."

"Jeff, if you're going to put in your time imagining dreadful, dreadful things like that, it's little business you have with a prospecting party in these unexplored wilds," Holloway told him, laughingly.

"Well said, Jess," answered Sanders. "No end of things could happen out here. But most of 'em don't happen."

"That's right," agreed Esau. "If a feller's goin' to spend time thinkin' all the things that could come to pass will come to pass, he'd better mosey straight back home and help his wife nuss the baby. Huntin' gold in a wilderness calls for men with—with sand in their craws."

"But I'm not imagining things!" protested Givens, a little warmly. "Did I imagine that grizzly tonight? If I did, the rest of you fellows are just about as scary at imaginary enemies as I am."

"No, that was a very real grizzly," Sanders admitted. "But we may never live long enough to see another one. And even if we do, let's not worry about the other one till we see 'im. No more sense in borrowing grizzly bears than there is in borrowing any other kind of trouble. Sufficient unto the day is the grizzly bear thereof."

"We can't explore a wild country without running some risk," Holloway observed.

And Givens answered: "Oh, I don't mind this wild country in daylight, when a fellow can see where he's going and what's about to happen to 'im. But this time of night I feel better by a roaring camp fire."

"When we track down this stampeded cow brute, it oughtn't to take us long to return to the fire," called back Orlando, who was one of those in the lead and following the trail.

"Don't know so well about that. If the cow keeps walking, she can walk fully as fast as we can trail her and maybe faster," Esau reminded them.

"But she's very likely to hang that bush somewhere before long, and have to stop," said Orlando. "I've been expecting that all the time."

At last, when they had been trailing the runaway cow for all of two hours, their ears were greeted by a doleful bawl not a great distance ahead.

"There! I've been hopin' to hear that!" exclaimed Esau.

Hurrying on, but still following the trail, the searchers soon came in sight of the object of their search. As Orlando had expected, that trailing bush had caught fast in a root and had brought her to a standstill. She was not lying down, and her whole appearance indicated that she was still nervous and somewhat frightened. A pleased lowing meant that she had caught sight of the men. They were soon on their way back to camp, Orlando leading her.

The cow's trail had wound here and there, but Sanders, who had brought his compass, had noted from time to time their general direction. And now it was not very hard to follow that direction backwards. When near where camp was believed to be, Esau uttered a long, loud call. Promptly came an answering call from Cooper, and a few minutes later they were all warming themselves by their big camp fire. Brindle had been tied again, this time near the fire.

There was some talk of putting out a guard for the rest of the night. But all were tired and sleepy, and their decision was that Frisk and the cow would scent the grizzly and give them warning if he came again. So all lay down, with their clothes and boots on, and were quickly asleep.

And they slept undisturbed till daylight. After breakfast the packsaddle and pack were fastened on the cow, and the wanderers took up their own packs and wandered on.

From here the country became more broken, and the travelers were soon beginning to climb. Now the timber was not so thick. Steeper and still steeper the slope became, till the party had to halt from time to time to rest and breathe. Their lungs were giving them more or less trouble.

Smaller and smaller grew the timber, till it was little more than as high as their heads; and it was also very scattering. Ere long they began to catch glimpses of something white. They were nearing both the timber line and the snow line. Farther up the timber ceased altogether.

At length the climbers arrived at the snow itself. But they found it more ice than snow, especially at the edge. It had fallen as snow, doubtless; but repeated meltings and freezings had converted much of it into solid ice.

They spoke of halting at the snow's edge to eat some dinner. Numerous tiny streams were trickling down the mountain side from the melting ice. But there was little grass here for Brindle, and they decided to push on till across the snow cap. So they got upon the snow and began to climb.

The ice was very rough, fortunately, and that made their climbing easier. Had it been smooth, they with their packs and guns, and Brindle with her heavy pack, would have found it frightfully hard to make their way up. At last they arrived on the mountain top. From here on they would have rough traveling, but not much climbing.

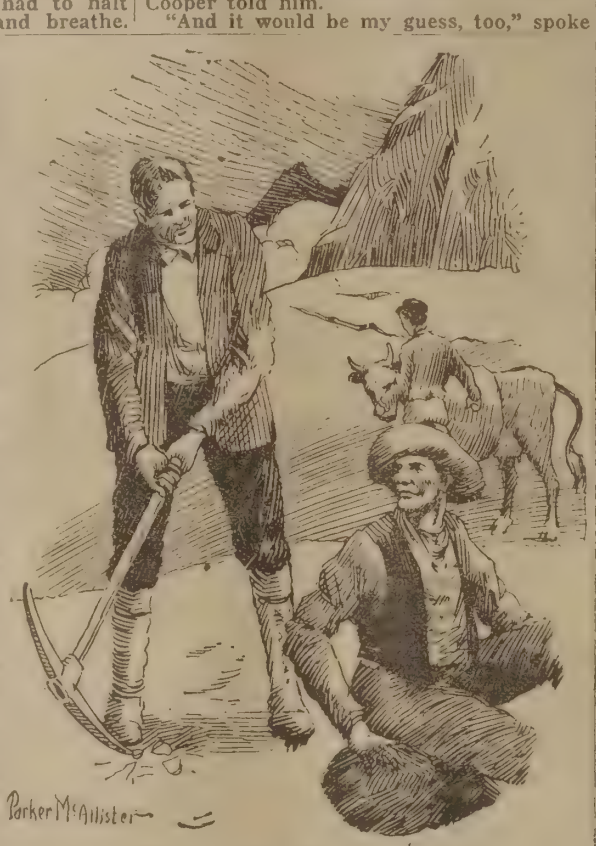
After trudging a mile or more over the great snow field, some of the men declared that they were tired out, and would have to eat something before they could go farther. So the party halted for dinner.

Kindling a fire here was, of course, out of the question. But they had some bread and a little cooked meat. So warm were they from climbing that there was no need of a fire for warmth. Not caring to sit on the snow, they took off their packs and sat on them. Orlando relieved Brindle of her pack, to give her a chance to rest. But her saddle was left on.

Most of the men began eating with their coats off. But, one at a time, they got up and put them on. And even then they all complained of being chilly.

"Fellow would mighty soon need a blanket or an overcoat up here," Jess Holloway remarked.

"If these mountain tops are like this in August, what must they be in January?" said Orlando.



"Wonder how thick this ice is. B'lieve I'll get my pick and dig down and see."

"Yes, that's what you'd better do, Esau," laughed Cooper. "It may be more than a hundred feet thick; or two hundred, or three hundred. You ought to reach bottom in a year or two, if you stick to your job faithfully."

"Do you reckon it's railly as deep as that?" asked Esau, in surprise.

"I don't know. That's just my guess," Cooper told him.

"And it would be my guess, too," spoke up Sanders. "Of course it's likely to be deep in places and shallow in other places."

"Wonder how thick this ice is?"

"Take a mighty long time for a hundred feet of ice to fall as snow," Givens remarked.

"Yes. But this mountain top may not have been entirely clear of snow for a thousand years—or ten thousand," said Sanders. "Some of this ice might have been here when Adam and Eve were in the Garden of Eden."

At first the sun had been shining dazzlingly on the snow. But, while the travelers were still eating, a cloud, which seemed not many yards above their heads, came drifting over them. And scarcely had the sun been blotted out when the party found themselves in a snowstorm.

Faster and thicker the snow fell, till the men could see scarcely twenty yards from where they sat. And from the moment the sun ceased to shine a chill, as of winter, had seemed to pervade the air. Now every man was glad to unroll his blanket and throw one of them around his shoulders. Before covering himself, Orlando spread his horse blanket over Brindle.

Thicker and faster the snow kept falling, till nothing else could be seen for it. There was no steady wind blowing; but every now and then a gust would sweep cuttingly over the bleak snow fields. All the party soon had their blankets over their heads. But for the fact that most of them were very weary, they would have been glad to get up and travel on.

For perhaps half an hour longer the six men sat there under their blankets, resting and shivering. By this time their feet were so cold that they could sit still no longer. Now they fastened Brindle's pack on again, took up their own packs and their guns, and trudged ahead over the ice. They still wore their blankets.

The snowstorm kept raging, so thickly that Sanders thought it prudent to glance often at his compass. Without something to guide, they would have been in danger of losing their way.

At length the snowfall slackened. More correctly, the travelers were passing out from under it. Ere long they came to where no snow was falling and the sun was shining. But they could look back and see snow falling behind them, with that low cloud hanging not far above.

"Never can I live long enough to forget this August day!" Orlando now exclaimed. "All my life I've been used to snowstorms—in the snow season. But this is my first time to pass through a snowstorm in summer."

"How would you like to live up here all the time, Lando?" asked Esau.

"Not while I can find any other place on earth to live, thank you. It would be too much like living at the north pole. I'm not Eskimo enough for that."

"It would certainly be a dreary life up here in the winter season," Cooper remarked. "Those winter storms must sweep over these bald-headed mountains with frightful fury. You recollect what that trapper told us about it—that man from St. Louis? He declared he wouldn't daré try to cross any of the snowy ranges in the wintertime, much less in a winter windstorm."

"Yes," somebody answered. "And he told us a man probably couldn't stand up on top of these mountains when the wind was at its worst."

"They say winter is apt to begin anywhere in the Rockies about the middle of September. But it's two weeks or so ahead of time this year," remarked somebody else.

Once again, while the adventurers were straggling on, slowly and painfully, across the snow field—the roof of the Great Continental Divide it probably was—a low cloud came sweeping over them. And again a snowstorm seemed to swallow them up. But it was only for a few minutes. Then a raw wind swept the cloud and the snowstorm away, leaving the sun shining on an inch or two of new-fallen snow.

Making their way over the ice cap was slow, wearisome work; and the wanderers were a good while longer getting across. Wonderfully relieved were they all when they arrived at the snow field's western edge.

Not long after leaving those white, polar regions behind, the six gold seekers found themselves among dwarfed, scattering pines. And the farther they traveled down the mountain side, the larger and thicker the timber became. Also the air was growing all the time milder.

It was the middle of the afternoon, or later, when the wanderers found themselves in dense forest. Still they kept on till they came to a little stream and some grass together. There they went into camp on a bench of the mountain.

"Well, we've crossed the watershed," Orlando remarked. "You can all see how this branch flows. From here on, I've no doubt, all the streams flow westward; and all the water that runs out of this country eventually helps to fill the Pacific ocean."

And Cooper added: "That must be right. For my part, I'm farther west than I've ever been before."

"Safe to say we're all a right smart fu'ther west than we've ever been till today," answered Esau.

There being abundance of grass here for their pack cow, the travelers soon decided to continue in camp for the remainder of the day and the succeeding night. They themselves were in need of rest. Again they all agreed, as they had more than once before, that, while mountain climbing was hard, coming down a mountain was far harder. Coming down seemed to strain some little-used muscles, so that one was almost in torture at times.

(To Be Continued.)

Bits of Fun for Everyone

Not Stone Blind.

She was complaining of his stinginess, and instanced the unsatisfactory quality of her engagement ring.

"You wouldn't notice these things if you really cared for me," he told her. "I thought love was blind."

She smiled wanly.

"Yes, darling," she replied, "but not stone blind."—Jewelers' Circular.

One-Hand Stunt.

Ted—I hear Tom was in a motor car accident and went over an embankment. Was it one of those dangerous curves?

Ned—Yes. He had his arm around it.

A Popular Move.

"Edith says she would rather dance than eat."

"Well, she'll find plenty of men who would rather sign a dance program than a dinner check."—Boston Transcript.

Revised Spelling.

English spelling is thus satirized in an exchange:

There was once a man who for hiccough
Tried all the known cures he could piccough;
And the best without doubt,
As at last he found out,
Is warm water and salt in a ticcough.

The Fitness of Things.

Bootlegger's wife (to maid)—Marie, I'll have my emerald earrings today—and order the green car for 11:30. They match so well.—Life.

Knew Where It Was.

"What is a vacuum?" asked a high school teacher. "Oh, I know all right," replied the student. "I just can't tell you but I've got it in my head."

That's Probably It.

Mr. Augustus Linkins of Sunville, Ala., was reading an old newspaper in which he chanced upon an item he thought might interest his friend.

"I observes by dis papah," said Mr. Linkins, "dat de smallest cows in de world is to be found in de South seas. Dis papah says dat de average weight of sich a cow does not exceed 150 pounds."

"Does yo' suppose," asked his listener, "dat dat's where dey gits de condensed milk from?"—Harper's Magazine.

Capitalistic.

"She isn't exactly pretty, but she has that indefinable something——"

"So I hear; her father has piles of it."—Judge.

May—Do you notice any change in me?

Ray—No, why?

May—I've just swallowed a nickel.—"Topics of the Day" Films.

Would Have to Be.

"Pretty strong girls that can do that, hey?" asked a man of another as they were walking along a business street.

"Do what?" asked the other.

He pointed to a sign: "Wanted—Girls to sew buttons on the third floor."

An Effective Weapon.

"Well, Pat, I suppose you have learned that it's dangerous to pick a quarrel?"

"Sure, I have that," agreed Pat feelingly, readjusting his bandages. "But it's even more dangerous to quarrel with a pick."—Orchard and Farm.

Too Many Prayers.

A Sunday school teacher is a great favorite with her girl pupils. The teacher frequently asks the pupils to commit to memory various bits of the Scripture. The other day the teacher got this note from the mother of one of the pupils:

"Dear Teacher: Please don't teach my Mary any more prayers, as I can hardly get her to bed now."

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Family Circle Girls

Dear Mrs. Barland: I thought I would write to your department, as others are writing. I am a country girl and proud of it. We live on a farm 7 1-2 miles from town, but we are planning to move in to town this winter, so I can go to school. I am 14 years old and will be a freshman this year, as I graduated from the eighth grade last January.

To the Circle members who embroider, here is a hint that I find helpful. The hot iron transfer patterns can be used only once the common way, as you probably know, but I have found that if you will trace with a blue crayon the lines on the side you put next to the cloth you wish to transfer the pattern upon and press with a hot iron, as usual, it will transfer clearly as often as you renew the lines.
Oregon. "SUNSHINE."

Here is a letter which proves that the men read our page. It is unsigned:

"Dear Mrs. Barland: I am an ornery old bachelor, but I do like to read the Family Circle, especially those letters in the last few issues. I admire such a girl as Miss M. P. and I hope she will find plenty of true, pure and honest girls like I think she is, to write to."

Here is a letter from a girl who took on the burdens of life at the same age that I did: A. W. B.

"Dear Mrs. Barland: I am a girl of 16 and my mother has been in poor health since I was 12 years old, so it has been my place to do the cooking and housework.

"When I make corn bread I use cream instead of lard and it makes the corn bread as light as cake.

"I like to live on a farm and I like to milk and I have that job in the summer, as my dad is always busy. I also like to be around horses.

"When children get hard bumps, where it raises a lump, rub the spot lightly with a silver knife and the lump will go away and leave no sore.

"Washington. M. D."

Dear Family Circle Girls: I am glad to hear from you and many letters are coming in, but I can not answer your personal questions through the paper and you must send name and address if you desire your letters to receive attention. I promise you I shall never print your names, but you must trust me to the extent of giving them. I want your age, too, and most of you give it. Please don't forget these things. Always address me in care of THE FARMER and please write your names plainly.

I am giving you girls a chance to express yourselves concerning any question you are interested in. If you don't agree with the opinions of the girls whose letters appear in the Circle write me what you do think and your reasons. There follows a letter with different ideas than those of M. P. Sincerely your friend,
ALICE W. BARLAND.

Dear Mrs. Barland: I read in the last issue of THE FARMER the letter signed M. P. and it made me mad clear through. I think she must be the old-fashioned type of girl. I don't think it wrong for a girl to kiss her boy friends, but I don't think she should go too far. I am 18, with brown bobbed hair and I go to high school. I like a good time and am wild about dancing and all sports. Concerning what M. P. said about love making with many boys, making it uncertain who is the right one, there is no need to worry. I have kissed a good many boys and I don't consider myself below any one, or a wild woman. At the present time I am engaged to a man 26 who loves me with all his heart and I love him just as much. We are going to be married in the spring and I think I can make as good a wife and mother as a girl who has never kissed a boy.

I live in a town of several thousand inhabitants and my father is a sheepman. My fiancee is a wheat grower, owning and working two sections of wheat land. I am sorry if I have said anything I shouldn't. I hope to hear more on this subject and I would like to hear from any one thinking as I do. "BILLY."

Home Recipes

Devil's Food Cake—One cup sugar and ½ cup butter creamed together, 3 tablespoons of cocoa, 1 cup sour milk, 2 beaten eggs, 1 teaspoon vanilla, 1 1-4 cups flour sifted with 1 teaspoon soda. Bake in a round pan. MRS. M. J. D.

Rich fruit cake: Cream one-half pound butter and one-half pound brown sugar until rich and light, then add five eggs well beaten, one cup molasses, two and one-half cups pastry flour, one pound each of seeded raisins and currants, one-half pound thinly sliced citron, which have all been mixed with one-half cup of flour; this makes three cups of flour in all. Add one teaspoon each of nutmeg, mace and cloves and last add one-half teaspoon of soda dissolved in a little warm water. Bake this in a couple of bread pans slowly for about two hours.

Preserved pumpkin: Prepare the pumpkin as you would for pies, that is, peel it and cook as for pies, mash or put through a colander and then can it while boiling hot, same as you can fruit. This will keep all winter.

Devil's food cake: Three-fourths cup of shortening, one cup white sugar, two eggs, two squares of chocolate or six tablespoons of cocoa, one scant cup of sour milk, one teaspoon soda, pinch of salt and flavoring and flour to make a medium dough. To make: Melt the chocolate in a saucer over a teakettle; mix this with the other ingredients, then add the eggs. Stir the soda into the milk and add the salt to the flour, add flavoring and bake either in layers or a loaf. I use either white or chocolate frosting. MRS. K. S. M.
Montana.

Dear Mrs. Barland: Here are a few hints to young housewives: Drop a bay leaf into tomatoes while cooking, add a few crackers or a piece of bread, a piece of butter, salt and pepper to taste and a little sugar if the family like sugar in tomatoes.

To Cook Rice Dry—Wash 1 cup of rice in several waters, rubbing well with the hands, use waters enough so the last will not look milky, add a heaping teaspoon of salt and 4 cups of boiling water, let boil hard for a few minutes without a cover and do not stir; next, place the dish of rice over another dish of boiling water, lifting the rice gently from the bottom of the dish, cover and cook till all water is absorbed and the rice is dry.

To Make Smooth Gravy—Brown required amount of flour for the amount of gravy desired in the grease from cooked meat, add cold water mixed with a little milk or much as desired, stir till it boils and add salt and pepper to taste.

Cottage Cheese—Let the milk stand till it sets thick in the pan, then score with a knife into squares, set in the oven and leave till the whey shows between the squares and the milk is crumbly when tested. Pour into a pointed thin bag and hang up and let drain till dry. Remove from the bag and put in a cool place and if you have made more than desired to eat at once cut off what you need and season with a very little salt and sweet cream, stirring the cream in till all smooth.

Nourishing Drink for Invalid—Put 1 cup of boiling water into a dish, add 1-2 teaspoon of salt and 1 handful of flaked wheat; let boil for 1 minute and strain and serve the liquid.—Mrs. L. A. M., Wash.

Potato souffle: Mix four cups hot mashed potatoes with one tablespoon of melted fat, two teaspoons of milk, one and one-half teaspoons of salt, one-fourth teaspoon of paprika and the well beated yolks of two eggs. Beat all till light and fluffy, then fold in the well-beaten whites of two eggs, pile lightly into a baking dish and bake till the mixture puffs up and becomes a golden brown. Try this.
ALICE W. BARLAND.

Butter Making in Winter—Keep the cream cool for four days, then warm it so as to sour it a little, then put it back in a cool place; this keeps it from getting bitter. Stir it well every time cream is added. The night before churning set the cream in a warm place and in the morning add a little warmed sweet skimmed milk before churning. This takes the sourness out of the cream and makes the buttermilk good. In the winter I churn the cream at 64 degrees and in the summer 60 degrees on account of the temperature of the room.—Mrs. B. E. T., Oregon.

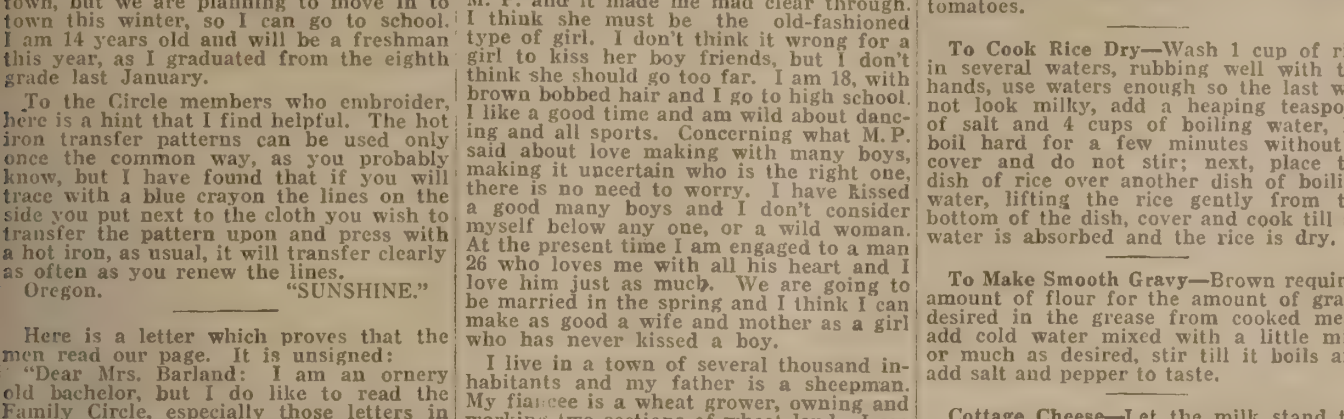
Pain?

TOUGH luck! But it would be lots worse—if you didn't have that bottle of Gombault's Balsam handy. Just a few drops rubbed in gently and the pain eases right up. One more application and the soreness is gone—for good.

WHETHER it's a bruise, a cut, a burn, a sprain, a sore, rheumatism, stiffness, a sore throat, or a chest cold you'll find quick relief in this unequalled liniment. Furthermore it is absolutely safe and a perfect antiseptic. In fact we know you will be more than satisfied.

ONCE you've tried Gombault's Balsam you'll never be without it. You'll give it the place of honor on the family medicine shelf—ready for use. One bottle lasts a long while. Get it today!

Sold by druggists, or sent by parcel post on receipt of price $1.50 per bottle.



AS A VETERINARY REMEDY
Gombault's Caustic Balsam has no equal. It supercedes all cautery and firing; and never leaves a scar or discolors the hair.

HEALING *and* ANTISEPTIC

Dainty Crocheted Yoke

By HELEN KAUFMAN

These dainty yokes are pleasant pickup work and will always make welcome gifts, for camisoles, combinations, or summer nightgowns. In having one started and ready at hand, a few moments now and then will not be missed and the work will progress in the meantime.

Use Cordonnet crochet cotton No. 60 or 70, either white or any of the dainty colors. For this attractive yoke, make a ch the length required to reach around the body, join. First row: 2 ch sts, skip 2 sts, 1 d c into the next st, forming a sp, continue making sps, for this row, join 5 ch sts.

Second row: * 1 s c into d c, 7 ch sts, skip 2 sps, 1 s c into d c, 5 ch sts, repeat *, for this row, you will observe that the loop of 5 ch sts, is over 1 sp, the loop of 7 ch sts, over 2 sps.

Third row: * 5 ch sts, 1 s c into center st of small loop, 5 ch sts, 7 s c over center portion of large loop, repeat *, for this row.

Fourth row: * 5 ch sts, 1 s c into center st of small loop, 7 ch sts, 1 s c into center st of next small loop, repeat *, for this row.

Fifth row: * 5 ch sts, 1 s c into center st of loop, 5 ch sts, 4 s c, 3 ch sts, form 1 p, 4 s c, all over large loop, repeat *, for this row, repeat second row and continue for one more row of p, completing the depth of underarm, to shape your yoke, make the back 4 large loops shorter than the front, allowing 4 large loops on each side for the underarm spaces, continue the pattern across the front, repeating the third row, twice between the p, decrease 1 loop on each side of each row, until you have dropped 2 large loops, then continue straight for the depth desired, finishing with the fifth row.

Next row: * 1 s c into p, 2 ch sts, 1 d c into center of loop, 2 ch sts, 1 d c into center of next loop, 2 ch sts, repeat *, forming a straight line across the top, turn.

Next row: *1 ch st, skip 1 st, 1 d c, repeat *, 7 ch sts, turn.

Next row: Beading, * 1 t c, 1 ch st, skip 1 st, 1 t c, 1 ch st, skip 1 st, start t c, as before, but when it is half done make 1 s c over the centers of 2 t c, then continue t c, 3 ch sts, skip 3 sts, repeat *, 3 ch sts, turn.

Next row: Repeat the row before the beading, then make second and third rows, alternately, for five rows.

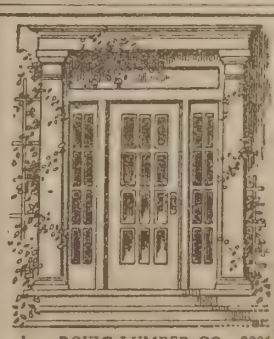
Next row: Start shoulder over 2 large loops and 3 groups of 2 small loops, as shown in the illustration, continue for the length required, break thread. Join thread at top of underarm and repeat for the back, and opposite shoulder strap, join the shoulders. Repeat second row, on the inside edge of shoulder straps.

Next row: Around the neck, * 1 s c into center st of small loop, ** 1 ch st, 1 d c, repeat **, 5 times over large loop, 1 ch st, repeat *, for this row.

Next row: * 5 ch sts, 1 s c over ch, repeat *, for each ch.

Around the sleeve, make 1 row of * 1 d c, 1 ch st, skip 1 st, repeat *.

Next row: Repeat second row, then repeat the scallops:



This yoke may be made any size, according to the first ch and any depth desired.

High Points in News of the Week

At the call of President Harding congress has reconvened in extra session for the consideration of important matters that the regular session failed to reach prior to the adjournment for the recent election campaign. The most outstanding subject for treatment is the proposed ship subsidy law, which President Harding has recommended. This measure is strongly supported by one element both in and out of congress and equally as vigorously opposed by another strong group, including some farm organizations. The heads of the American Farm Bureau federation some time ago issued a statement opposing the general principle of a subsidy, but approving the bill now proposed on the ground that the maintenance of an American merchant marine is vital to the welfare of the agricultural producers and industry at large. Some farm bureau leaders are opposed to it. Also many leaders of such organizations as the farmers' union and the grange have expressed opposition to the proposed measure.

While it is doubtful if the present extra session will give any definite consideration to the prohibition question and the bonus question, both of these issues are impressively prominent in the minds of the people at large and of members of both houses and government officials. The recent election will probably cause something of a realignment on these matters even before the newly elected senators and representatives take office next year. There is said to be strong indication that President Harding will modify his own position to some degree on the bonus question, but that he is unchangeable on his prohibition stand. The president, when a senator, voted for the 18th amendment and also for the Volstead enforcement act and is understood to be unreservedly in favor of both at the present time.

* * *

Notwithstanding the fact that the state of California as a whole indorsed national prohibition and the Volstead enforcement act, Congressman Kahn, representing the district in which San Francisco is located, has announced that he will immediately start a movement in congress for the modification of the prohibition laws. The city of San Francisco voted overwhelmingly in favor of such modification at the recent election, but was outvoted by the outlying sections of the state.

* * *

Whther or not Mrs. W. H. Felton of Georgia will be seated as a member of the United States senate is a question of considerable interest, both sentimental and political. Mrs. Felton, a woman of exceptional prominence, was appointed United States senator to fill the vacancy caused by the death of one of Georgia's senators. Since her appointment a permanent successor to the deceased senator has been regularly elected. If Mrs. Felton is seated it will be for perhaps one day only, largely with the view of giving her credit for being the first woman to sit as a member of the upper house of congress.

* * *

Former Premier Clemenceau of France has arrived in the United States for a visit of a few weeks. It is understood that he comes largely on his own initiative, though recognized as a spokesman for the government and people of France. His expressed purpose is to assist in bringing about a closer friendship between France and the United States through the creation of a better understanding in this country of the attitude that France has taken in world affairs during the last few years. The former premier is anxious to secure the moral backing and the practical assistance of this country in putting into effect the French idea of world reconstruction and the establishment of permanent peace. In addition to making a tour of the country and delivering a considerable number of public addresses he is expected to confer personally with President Harding and other high government officials.

* * *

United States Senator Truman H. Newberry of Michigan, whose seat in the senate has been bitterly contested, has tendered his resignation to take effect immediately. The senate last summer voted to seat him, following charges that he had spent excessive sums in securing his election. As a result of the last election it became evident that the contest would be reopened. Senator Newberry in his resignation declared that it was impossible for him to render proper service under what he called continued "partisan political persecution."

* * *

As a result of the election in England last week the new premier, Andrew Bonar Law, who succeeded former Premier Lloyd George upon the latter's resignation, will have a substantial working majority as head of the conservative element in the British parliament. This victory of the conservatives, the apparent failure of the Lloyd George regime to secure reindorsement and the considerable gain shown in the labor strength were the features of the election.

* * *

The United States supreme court last week, in a decision involving Japanese ownership of land, ruled that the Japanese is ineligible for American citizenship and any of its privileges. This action was vigorously commented upon by newspapers in Japan, though many were inclined to be temperate in their criticism of the ruling. Some even went to far as to state that it probably meant the early complete exclusion of the Japanese from this country.

* * *

When the railroad strike was called in July, William Allen White of the Emporia (Kansas) Gazette displayed a poster in his window expressing swmpathy with the strike movement. This was in direct violation of a Kansas law prohibiting expressions of such sympathy in any strike. White was arrested on a charge of violating the law, but his trial has not yet been held. It is now reported that agreement has been reached that the case shall be taken directly to the supreme court of the United States to determine whether or not a law such as that on the Kansas books is constitutional. The decision when rendered will be of national as well as state significance.

* * *

The peace conference between the Turkish government and the European allies is in session at Lausanne, Switzerland. Last week it seemed probable that the impetuous Turkish nationalists, who have driven Greece out of Asia Minor and virtually overthrown the old established Turkish government at Constantinople, would violate the armistice agreement between them and the allies, thus probably making the present conference impossible. Such catastrophe, however, was averted and the conference is in session with reasonable hope of success. The Turkish sultan last week fled from Constantinople to escape a threatened trial for treason by the revolutionary leaders. He made his escape on a British ship to allied territory. The nationalist leaders have demanded his return and it is understood to be possible that he will be remanded for trial.

* * *

A conference of leaders in the present so-called progressive movement has been called for December 11 in Chicago to review the results of the recent election and consider the question of whether or not a third party should be organized for activity during the next general election campaign.

A call for a national conference of progressives to meet in Washington, D. C., December 1 and 2 and organize a progressive group in congress has been issued by Senator La Fallette (Rep., Wis.) and Representative Huddleston (Dem., Ala.), chairman and vice chairman, respectively, of the people's legislative service

* * *

The American Red Cross began its annual membership drive Armistice day. It will continue to Thanksgiving day, November 30.

* * *

The cabinet of Premier Wirth of Germany resigned last week and President Ebert is busily engaged in the formation of a new cabinet. He is reported to be trying to secure a nonpartizan organization composed of men with industrial and economic training from all of the political elements in Germany. At this writing the new premier has not been named.

The Loyal Legion of Loggers and Lumbermen, the organization covering the Pacific northwest, and whose hope is the harmonizing of employers and employees in the lumbering industry, is devising legislation in all three states for a uniform eight-hour law to cover all logging camps.

* * *

The war department is understood to be working out a plan for "an efficiency council or board of control" that would have charge of all resources of the country with authority to conscript them and utilize them in the best way possible to insure success in case of war.

First Large Wheat Crop

The first large crop of grain raised east of the Cascades in either Washington or Oregon was by Charles Russell, says Dan G. Goodman. Mr. Russell, who died about 30 years ago, was a government wagon master during the Indian wars of the 56s. After the Indian trouble had subsided Mr. Russell was put in charge of the government teams at Fort Walla Walla. Much of the time the teams and drivers were idle and in order to keep the horses in condition he used them to plow up and seed about 1000 acres of bunchgrass land located about three miles southeast of Walla Walla. From this tract he harvested and threshed 40,000 bushels of grain.

For many years previous to that time there had been numerous small tracts under cultivation in widely scattered localities, but this was the first attempt at large-scale production. Prior to that time farming had been confined to the creek and river bottoms, moisture being derived from subirrigation or overflow in flood times.

In 1874 Dr. Blalock plowed and seeded to wheat 2000 acres of bunchgrass land situated about half way between Walla Walla and the present location of Milton, Ore.

The most serious problems of the farmer arose after harvest. Transportation was slow and difficult, for long hauls had to be made by wagon. Only a very small portion of the wheat raised was consumed at home, and the rest had to be taken to Wallula, where it was loaded on boats and floated down the Columbia river.

IRRIGATION AT YAKIMA.

A dance for delegates on opening night and an inspection tour of the reservoir project at Rimrock, where the United States reclamation service is building its biggest dam, are among the extra-program inducements offered for attendance at the annual meeting of the Washington Irrigation institute at Yakima November 24 and 25. F. T. Crowe, engineer in charge of Rimrock construction; A. L. Smith, engineer on the proposed Horse Heaven project, and W. B. Armstrong, president of the state farm bureau, are on the program, which was announced by R. K. Tiffany of Spokane, president of the institute.

Dept. D-12,

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Habit and custom determine our physical comfort, as they determine our conduct generally.

On an August night I walked through the streets of Plymouth England. It was damp and raw. I had my overcoat collar up and my hat pulled down. To me it seemed uncomfortable and disagreeable.

Dr. Copeland.

To the local inhabitants it was a delightful evening. Folks were sitting outside their houses and nobody wore a wrap. Among others I saw a sweet old couple, white-haired and feeble with age.

They sat on a bench in their garden, both without wraps or hats. They appeared as serene and comfortable as my own parents appear on an August evening in Michigan. In England they consider it "childish" to have a grate fire, or to make use of excessive quantities of hot water. By long custom they have become used to their colder climate, and to the conditions of their mode of life. Of course, they have lived this way always, and, to them, these climatic conditions are "natural."

I think there is no doubt that our American ways are enervating in some respects. We make our skins tender by humoring them too much. Needless to say, I consider one day in North America better than two days across the ocean. However, this feeling does not blind me to the weakenesses of our national life.

Americans are unduly timid about fresh air, rain, out-of-door exercise, open windows and cold water. Almost all our public halls are poorly ventilated. Our churches, schoolhouses and homes usually are not hot.

We survive all these things. They are not necessarily fatal. But they do lead to definite difficulties. No doubt chronic nasal catarrh, throat trouble and bronchitis may be produce by continual existence in vitiated and contaminated atmosphere.

If we accustom ourselves to cool air we are less likely to "take cold" on exposure. The body should be hardened by familiarly with open windows.

If a child is brought up from his earliest existence to reasonable exposure he will be a "fresh air fiend" the rest of his life.

Until everybody recognizes the importance of fresh air and cool rooms it will be difficult to readjust our mode of living. You know what a fuss there is if an air advocate opens a window in a public place. Immediately there is a yell about the "draft." But after a while our people will recognize the physical importance of a more sensible attitude toward cool air and ventilation.

Just Folks

Life is a mixture.

To go ahead is the last word.

Death is the background of life.

Fears are the weeds of the mind.

The best publicity "stunt" is preceded, accompanied and followed by quiet, persistent work. You may die before quiet and persistent work gets you anywhere. Fireworks are needed to put you on the map. But fireworks in themselves will not keep you on the map for any length of time.

The circus parade brings out a lot of people who would not otherwise attend the circus. There is, however, nothing of the parade's publicity in preparing for the circus stunts. E A S

IMPIETY

BY JULIA M. MARTIN.

"Dear Lord, what have I been and done!"
Old Sarah moaned, in deep distress.
"Thanksgivin' Day's been here and gone
Without my voicin' thankfulness.
I've just that busy been all week
A-helpin' neighbors down with flu!
Praise be I didn't clean forget
To keep the blessed Sabbath, too!"

The kindly soul was troubled so
At thought of her impiety
That one, who never Christian was
For Sarah's comfort, feigned to be,
And counseled, "Sister, do not grieve.
The Lord is in His temple still.
They also keep the Supper's hour
Who Mercy's great behest fulfill."

God send us more ingratitude,
If Sarah's way the thankless be.
And, such as was her comforter's,
God give us more hypocrisy!

A SERIOUS PROPOSITION.

Life is serious enough at best; inject all the frolic you can.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4166-4175. Lady's Costume. Waist 4166 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4175 cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is 2 1-4 yards. To make this dress with sleeves for a 38-inch size requires 6 3-4 yards of 40-inch material. Two separate patterns, 10 cents for each pattern.

4192. Lady's Cape. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 3-4 yards of 36-inch material. Price 10 cents.

4189. Girl's Dress. Cut in four sizes; 4, 6, 8 and 10 years. A 6-year size requires 2 1-8 yards of 40-inch material. Price 10 cents.

3850. Lady's Dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width at the foot is about 2 1-4 yards. Price 10 cents.

3441. A Set of "Short Clothes." Cut in five sizes: 6 months, 1, 2, 3 and 4 years. A 2-year size will require 3 3-8 yards of 27-inch material for the dress, 1 3-4 yards for the slip, and 1 yard for the drawers. Price 10 cents.

4170. Boy's Suit. Cut in four sizes: 2, 3, 4 and 6 years. A 3-year size requires 3 3-8 yards of 32-inch material. Price 10 cents.

3362. A Comfortable Negligee. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. A medium size will require 8 1-2 yards of 27-inch material. Price 10 cents.

3809. Lady's Work or Home Dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

4185. Girl's Dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires 4 yards of 32-inch material. Price 10 cents.

3805. A Popular Apron and Cap Set. Cut in four sizes: Small, medium, large and extra large. A medium size requires 3 1-4 yards of 36-inch material for the apron, and 3-4 yard of 30-inch or wider material for the cap. Price 10 cents.

2300. An Attractive Set of Toy Animals. The patterns are cut in one size only. It will require 1-2 yard of flannel for the sheep, 3-4 yard for the dog, and 3-8 yard for the pig. Price 10 cents.

2967. A Set of Toy Animals. Cut in one size. The cow requires 5-8 yard of 27-inch material and the horse 7-8 yard of 36-inch material. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates, and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

Please fill in this order and mail with remittance to:

Just What You Want
may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

BEST
For a Generation

American housewives are using Calumet Baking Powder today with the same success that their mothers experienced over a third of a century ago. This perpetual growth of favor has made

BEST BY TEST

CALUMET

The Economy BAKING POWDER

—sales over 150% greater than that of any other brand.

There isn't a baking powder of greater merit—there isn't a leavener obtainable that will produce more satisfactory or positive results. That's why the largest baking powder factories in the world are always busy turning out enough Calumet to supply the great demand.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

THE WORLD'S GREATEST BAKING POWDER

Beatrice Warfield is a cousin in Skagit county, Wash. She is 11 years old. March 27, 1923, she will be 12. Last month Beatrice won second prize in the Pioneer story contest in The Junior Farmer. She thinks The Junior Farmer is the best paper she ever read.

"I have two pet kittens, one is black and the other is white; the black one is named Blacky and the other is Whitie," says Ferne Daugherty. Ferne likes the riddles and jokes in The Junior Farmer. She is an eastern Washington cousin.

This fall Roger Stone has picked 300 boxes of apples and he has done this outside of school hours. Roger's dog has a family of puppies. Roger is going to keep one of them. He bought a heifer calf with the money he earned picking apples. He also is a northern Washington boy. He says they are going to have a big bell for the school which he attends.

Alice Pratt, an 8-year-old cousin in Whatcom county, Wash., tells us about her five sisters. Ethel and Esther, younger than Alice, are twins, and then there are Betty and Laura and little sister Joyce, who is three months old. Alice has a friend named Julia Kuchenreuther. May 1 is Alice's birthday.

Nine-year-old Frances Chudek writes her first letter to us. She lives on Bellingham bay, northwest Washington, and has two brothers. Frances' birthday is in October. She says she has two pets, a cat named Tommy and a rabbit named Browney.

This is the first letter we have had from Alvin Eshelman for a year. He says the summer has passed and he has enjoyed every bit of it. He went with his brother to the big stock pasture, 22 miles from his home, several times during the summer. Once when his brother and a companion were on their way to the pasture they saw a bobcat run up a tree. His brother came home for a gun while his companion watched the cat. When his brother arrived with the gun they shot the cat and received a bounty of $5. Alvin is a southern Washington boy.

Marcus Ruth writes that he has a good teacher, but she likes to keep order in her school room. If she catches any one chewing gum, whispering or writing notes she presents them with a little ticket which means 5 per cent off in deportment. Marcus has been presented with two tickets already when he wrote to us November 8. He is one of our new cousins and we are glad to hear from him. He lives in Lewis county, Wash. He is 11 years old.

A farm of 720 acres in eastern Washington is Herbert Boeck's home. Herbert says they have 19 head of horses, four cows, pigs, chickens and geese and Tommy, the cat, who is 6 years old. There are 11 children in the Boeck family, seven sisters and four brothers. They go two miles and a half to school. Herbert was 11 years old March 19, 1922.

Birthday Greetings

THURSDAY, November 23—Leslie John Beardsley, 5 years old; George Amos Stallcop, 11.

FRIDAY, November 24—Jewel Field; Violet Gossau, 11 years old; Fred Reber; Jessie Riether, 10.

SATURDAY, November 25—Helen Magnuson, 10 years old; Charlotte Theadwell, 9.

SUNDAY, November 26—Ruby May Schrag, 9 years old; Harriet Shaw, 11.

MONDAY, November 27—Virginia Estelle Colley, 11 years old; Jessie Rupp, 8.

TUESDAY, November 28—Gladys Cook, 10 years old; Erma Sherry, 10.

WEDNESDAY, November 29—Viano Kohtala, 7 years old; Iva Kostenbader, 11; Aline Owings, 10; Anna Rainbolt, 9.

BEDTIME STORIES

By THORNTON W. BURGESS.

JOHNNY CHUCK GROWS JEALOUS.

Johnny Chuck is usually very happy. In fact, Johnny Chuck long ago discovered the best thing in the world, which is contentment. He has always been satisfied to sit on his doorstep and smile as he watched the world go by, but now a little bit of discontent had crept into Johnny Chuck's peace of mind. The fact is Johnny Chuck has become just a wee, wee bit jealous.

Now jealousy is like the weeds that grow in the garden. You know they start from tiny, tiny seeds, and when they come through the brown earth they are just tiny, tiny plants, but they grow so fast that pretty soon they are great big plants and the farmer has to go along and hoe them out. At first Johnny Chuck was just a little bit troubled. It didn't amount to much, but he couldn't keep it out of his mind, and the more he thought about it the bigger the trouble grew.

Now, what do you suppose it was all about? Why, it was just because he had found some one who could dig faster than he could. Johnny Chuck is a wonderful digger. My, my, my, how he can make the sand fly when he wants to try. He had been very proud because no one else could dig as fast as he could. Peter Rabbit could run faster than he, Happy Jack Squirrel could climb a tree faster than any one else; Little Joe Otter was the fastest swimmer in the smiling pool, but Johnny Chuck didn't care, for no one else had ever been able to dig a hole as fast as he could.

Now, there was a newcomer on the green meadows. Johnny Chuck had been the first one to welcome him and had been very polite and nice to him, and right down in his heart Johnny was very proud of him, but the newcomer could dig. My goodness! how he could dig! In fact his name was Digger the badger.

So Johnny Chuck sat on his doorstep and forgot to smile. He was actually jealous of Digger the badger. The merry little breezes danced across the green meadows and pulled Johnny's whiskers and rumpled his hair. They actually didn't know what to make of it when Johnny Chuck refused to play with them, but just sat and sulked and sulked. Peter Rabbit came hopping along and invited Johnny Chuck to go down to the sweet clover patch, but Johnny refused and just sulked and sulked and sulked. Jimmy Skunk came over to tell him of some tender young cabbage which he had discovered in Farmer Brown's garden, but even that didn't interest Johnny Chuck.

So Johnny Chuck sat on his doorstep and forgot to smile.

It grew worse and worse every day until all the little meadow people knew that something was wrong with ohnny Chuck. He grew so cross that no one could get a pleasant word from him, and then something happened. It all happened through Digger the badger.

Brown, Mae Ensley, Mildred Swanson, Lauretta Schuman, Ralph Gustin, Helen Smith, Leona Robb, Lola Covert, Paul Ylonen, James Dicken, Ethel Boawn, Janie Stewart, Anatha Reiman, Zeita Wood, Marie Adair, Thelma L. Nelson, Grace Warren, Mildred Dicken, Robert Tribe, Lloyal Golding, Laura Stringfield, Mollie Bennett, Ellen Nathrop, Grace Anderson, Grace Brunink, Edrie E. Bradbury, Margaret Irwin, Aune Palola, Mabel Maley, Laura Thomas, Dorothy Hood, Inez Brown, Charlotte Treadwell, Arthur Woolverton, Audrey Ogle, Matilda French, Annie Thompson, Carl Wilson, Alma Marie Schneider, Basil Mulford.

The success of THE WASHINGTON FARMER'S subscription plan has not been of the kind which goes up like a rocket and comes down like a stick. It rests upon such a solid foundation that it has already stood the test of six years, while another season of success and popularity is certain if our readers throughout the state continue to cooperate as loyally as they have in the past.

We have every reason to believe that they will do so and consequently repeat our request that you send in your subscription order at least sixty days in advance of the expiration date on the wrapper of your paper, that you send in your neighbor's order with yours, and that in case your own subscription is attended to for the year you secure at least one order for our lists.

By doing this a great deal of needless expense is eliminated and the subscriber gets the benefit of every penny saved.

Please put yourself upon the records as a booster for cooperation.

Nov. 23, 1922.
THE WASHINGTON FARMER,
Review Building, Spokane, Wash. .....1922.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

BROOKS APPLIANCE CO., 456 C State Street, Marshall, Mich.

News for Breeders

PLAIN IS AS PLAIN DOES.

Plain Mary of Stoneway is, perhaps, not as plain as her name might imply, for she was awarded second prize in her class at the recent Clallam county fair. She belongs to a club boy, Stacy Stone of

Port Angeles, and if properly cared for, as Stacy promises to care for her, may easily be the start of a successful Jersey herd.

A CHAMPION BERKSHIRE.

This is a picture of the senior herd boar in the Berkshire herd on the farm of W. J. Morris of Lynden, Whatcom county. He is Bonnie's Barron 4th and was champion Berkshire at the Whatcom county fair in September.

HOLSTEIN SALE.

The Lewis County Holstein-Friesian club has taken over the management of the third annual consignment sale of Holsteins at the Southwest Washington fairgrounds on December 9, and Secretary E. A. Donaldson of the club states that there will be about 60 head in the ring, with the probability that they will all be Lewis county cattle.

This club, which is the most active agency boosting black-and-whites in the entire state, is working hard to make Lewis county truly the Holstein center of southwest Washington, and by its efforts has accomplished a great deal toward that end in the last two or three years.

BUYS MILKING SHORTHORN.

N. H. Kandle of Nachez, Wash., recently purchased the fine young milk strain Shorthorn bull, Kirtland Wildeyes, from Kirtland farm of Central Point, Ore. The young bull is by the Kirtland farm herd sire, Foothills Conqueror, and is well bred on his dam's side. Mr. Kandle feels that he has secured a herd leader that will sire milking quality as well as Shorthorn type. The sale was the direct result of an advertisement in The Oregon Farmer.

AYRSHIRE HERD BOUGHT WITH FARM.

A fine herd of about 30 purebred Ayrshires and a great herd sire, Ben Hur, goes with the big farm, known as the Dr. Loughridge farm, three miles from Grants Pass, that was purchased from W. C. Paige by Harold J. Parker, formerly of Wichita, Kansas. The foundation cows in the herd were obtained from H. J. Domes of McCoy and are good producers as well as good individuals.

TO HEAD PUREBRED HERDS.

Andrew Lund of Fairfield, Wash., during the Western Royal Live Stock show, purchased a fine Poland China junior boar pig from P. L. Sain of Oakesdale. Marcee Thom of Ritzville also bought a young boar from Mr. Sain. Both pigs go to head purebred herds.

Oreglow Jerseys
Come to Oreglow for Golden Glows. Our 3 herd sires—Silver medal bull Pogis Oneida's Chief, Vive La France's first son, Darling Jolly Lassie's first son.
OREGLOW FARM, Boring, Ore.
D. BROOKS HOGAN, Owner.

Fourth Gold Medal Jersey Bull
now in use in my herd. No other herd ever had so many. Young stock for sale.
ED CARY, Carlton, Ore.

Maple Ridge Farm offers for sale richly bred young bull ready for service; 3 nearest dams of sire average 841 lbs. fat; dam is R. of M. daughter of St. Mawes Noble. Bargain. Terms.
J. C. BROWN & SONS, Shedd, Ore.

AllendaleJersey Farm, Well shaped bull, 1 year old, sire G. G. Chief breeding, closely related to Viva La France and Lulu Alpha. Price $65.
A. A. BIXBY, Freewater, Ore.

Two Jersey Heifers nearly a year old, from my high record test cows. Two Duroc boar pigs, bred from champions, very reasonable.
HANNEMAN JERSEY FARM, Corbet, Ore.

Holstein Bulls sired by son of world record cow, from dams sired by brother to Segis Pietertje Prospect. Prices low.
H. R. BOOMER, Payette, Idaho.

GOOD BULLS, COWS, CALVES, SWINE, SHEEP, GOATS, DOGS, POULTRY
bought and sold in great numbers by those who read and also use our "Want Ad" service.

You simply can not afford to pass up the savings offered you on this page. These items represent the newest styles in apparel and shoes and the low prices at which they are quoted should urge every thrifty person to order at once. You don't risk a penny—just select what you want from this page of bargains.

Buy Now! You'll Save!

Don't send a cent with your order. Just letter or postcard brings any of these smashed-price bargains. Merely give name and number of each article you want. When goods arrive, pay bargain price and postage. If not delighted with the money you have saved, return the goods, and we'll refund your money instantly.

The Lowest Prices in America

"Stylish Stout" Gabardine Dress $3.98

This is a special design planned to give long slenderizing lines to stout figures. Note how the collar, revers and panels carry out the long effect. Note, too, the attractive embroidery on sleeves, vestee and panels. The self-material belt ties at back. Sizes 39 to 53. In three popular shades. **Order Navy by No. 54E5470. Order Black by No. 54E5471. Order Brown by No. 54E5472. Send no money. Pay $3.98 and postage for any color on arrival. State size.**

Men's Winter Underwear 99¢

Heavy weight flat knit union suits of select long fiber cotton in popular Jaeger or gray Random color. Heavily brushed fleece lining on inside. Wrists and ankles are elastic knit. Sizes 32 to 46 chest. Buy a year's supply right now—today. **Jaeger color, No. 54C1279. Gray Random, No. 54C-1280. Send no money. Pay 99c and postage on arrival. State size.**

Boys' flat knit union suits of fine quality cot[illegible] Sizes 24 to 32 for 3 to 11 years. **Order by No. 54C1358. Price 89c. Pay 79c and postage on arrival.**

Manchurian Wolf Fur Scarf $4.49

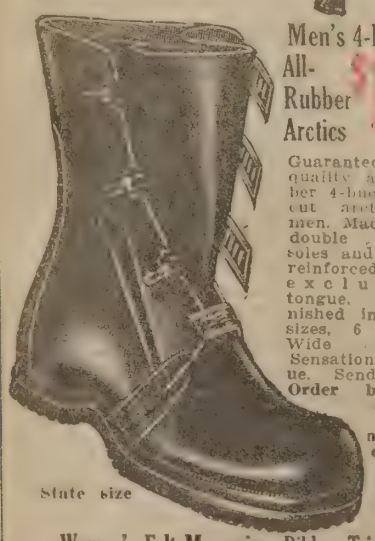
This scarf is about 46 inches long and 12 inches wide. It is stylish as well as warm. The lining is of good quality satin, and there is an extra ruching laid around the neck inside, so as to protect the fur from wearing. Only the most expensive fur scarfs have the features which we offer you at this bargain price. **Order black Manchurian wolf scarf by No. 54E5193. Order brown by No. 54E5194. Send no money. Pay only $4.49 and postage on arrival. If not satisfied your money will be refunded. Be sure to state color wanted.**

Give Size

BLACK GUN-METAL KID HI-CUT $1.98 UP

Send for this handsome rich kid-skin shoe in black kid or gunmetal. Note the medium toes with pretty imitation perforated tips, the perforation around vamp and on lace stays. Very popular model and really a sensational bargain now. Durable, flexible soles. Sizes 2½ to 8. Wide widths.

Orderblack by No. 54A-122. Pay $2.39 and postage on arrival. Order gunmetal by No. 54A476. Pay. $1.98 and postage on arrival. State size.



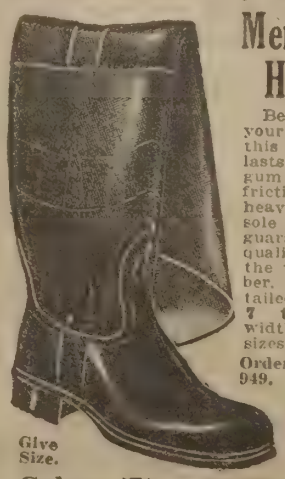
Men's Padded Felt Slippers 99¢

State size.

Men's standard weight and high-grade wool felt Everett slippers. Made in either brown or gray oxford with red plaid collar and novel pipe design on vamp. The soles are of soft, good quality gray chrome leather, heavily padded. Have thick padded heels. A slipper for real comfort and service. Sizes 6 to 11, wide widths. **Order brown by No. 54A816. Gray by No. 54A817. Send no money. Pay 99c and postage on arrival.**

Men's 4-Buckle All-Rubber Arctics $1.98

Guaranteed best quality all rubber 4-buckle hi-cut arctic for men. Made with double thick soles and seams reinforced. Snow excluding tongue. Furnished in men's sizes, 6 to 13. Wide widths. Sensational value. Send quick. **Order by No. 54A990. Send no money. Pay $1.98 and postage on arrival.**



State size

Women's Felt Moccasins, Ribbon-Trimmed 98¢

Fine grade wool felt, with combination of fawn. Sizes 3 to 8. **Order American Beauty by No. 54A389; order copen by No. 54A-390; order lavender by No. 54A391. Send no money. Pay 98c for any color. State size.**

Men's Special Hip Boots $2.98

Give Size.

Be sure to order your pair while this great saving lasts. Men's pure gum hip boots; friction lined; heavy corrugated sole and heel; guaranteed first quality. Made of the very best rubber. Usually retailed at $5. Sizes 7 to 11. Wide widths. No half sizes.

Order by No. 54A-949.

Polo Cloth Coat $9.98

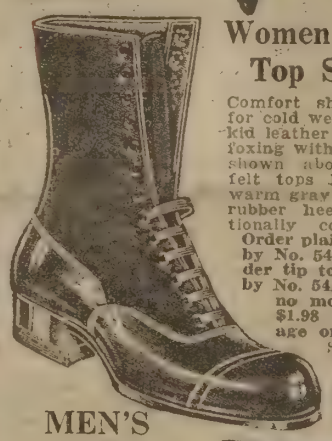
We positively guarantee that—quality for quality—there is not the equal of this garment under $12.00 anywhere else in the country. Note the snappy lines, the deep coney fur collar, the self-material belt, the side patch pockets and two muff pockets besides. Misses' sizes, 14 to 20 only.

Order No. 54E5657 Send no money. Pay $9.98 and postage on arrival.

Girl's Fur Trimmed Coat $3.98

A sensational bargain—a handsome coat of Pressed Velour in Navy Blue or Brown, regular $7 value. Has collar of genuine Kit Coney, which buttons snugly around neck. Belt all around, two novelty pockets and two buttons at back. Sizes 7 to 14 years. **Order brown by No. 54E5595. Order navy by No. 54E-5596. Send no money. Pay $3.98 and postage on arrival. Money back if not satisfied. Always mention size.**

Exquisitely Embroidered Gabardine Dress $2.98



This delightful model is sure to be one of the favorites of the season. It is of beautiful cotton gabardine in navy blue or brown. The vestee, smart bell sleeves and fashionable panels are richly embroidered. The self material belt ties gracefully at back. Sizes 34 to 44. **Order navy by No. 54E5525.**

Order brown by No. 54E5526. Send no money. Pay $2.98 and postage on arrival.

Women's Felt Top Shoes

State size.

Comfort shoes, ideal for cold weather. Soft kid leather vamp and foxing with plain toe, shown above. Black felt tops lined with warm gray felt. Low rubber heels, exceptionally comfortable. **Order plain toe style by No. 54A403. Order tip toe style by by No. 54A407. Send no money. Pay $1.98 and postage on arrival.** Sizes 3 to 8. Give Size.

$1.98

MEN'S HI-CUT

Wonderful 11-inch Hi-Cut Storm Boots of soft brown cowhide leather, absolutely barnyard proof. Solid leather. Double Chrome outsoles, sewed and nailed; solid leather insoles; durable counters; dirt-excluding bellows tongues. Sewed throughout with heavy waxed linen thread. Sizes 6 to 12. wide widths.

$2.98

Order by No. 54A769. Send no money. Pay $2.98 and postage on arrival. State size. Order boys' sizes, 1 to 5½, by No. 54E570. Price $2.48. Order little boys' sizes, 9 to 13½, by No. 54E571. Price $1.98. Send no money. Pay bargain price and postage on arrival.

Men's and Boys' Brown Leather Heavy Work Shoes $1.98

State Size.

Splendid brown leather work shoes. Heavy durable uppers; extra strong solid oak leather soles; leather insoles; low broad leather heels, and reinforced leather back stay. Roomy last. **Order men's sizes 6 to 12 by No. 54A758. Send no money. Pay $1.98 and postage on arrival. Order boys' sizes, 1 to 5½, by No. 54A554. Price $1.89. Order little boys' sizes, 9 to 13½, by No. 54A555. Price, $1.79 and postage on arrival. Mention size.**

Men's Felt Shoes and High Cuts

54A-880—$1.98

54A-889—$1.79

Extra high cut or regulation height felt shoes of excellent quality. Thick soles and heels. Sizes 6 to 12. Wide widths. **Order high cut by No. 54A880. Price $1.98.**

Order regulation cut by No. 54A889. Price $1.79. Send no money. Pay bargain price and postage. State size.

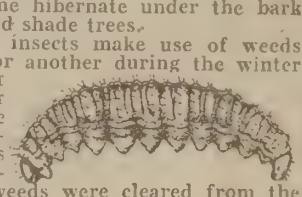
Clean Up and Kill the Bugs



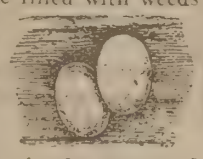
Weeds and Vegetable Roots Tide Pests Over the Winter

By DON B. WHELAN

The proper measures and precautions taken this fall or during the early winter will do much to keep down many of the insects of the farm. It has been often said that "an ounce of prevention is worth a pound of cure," and never was this more true than in the prevention of insect depredations. Many of the insect pests of the garden and field, as well as those of the orchard, can be controlled to a great extent by correct farm practices. The fall and early winter present an ideal time in which to forestall the damages of many insects that otherwise prove to be very serious during the following year. During this time the insects are inactive and can the more easily be controlled. Many insects spend the winter in the egg stage, some on weeds near its food plant, some on the remains of its food plant; others lay their eggs in the ground or in the trunks of trees. Others spend the winter in the larva or worm stage, most generally in silken cases or cocoons of some sort, or else under rubbish. Others may pass the winter in the pupal stage, either in the ground or in some sheltered place. Piles of trash or heaps of brush, or even crevices in the ground, afford protection where the adults may pass the cold months. Some hibernate under the bark of orchard and shade trees.

Millions of insects make use of weeds in one way or another during the winter months for sustenance or shelter while their particular food plants are not growing. If all weeds were cleared from the farm in the fall, particularly from the fields and fence-rows where the insect pests have been bad the previous season, some of our worst insect enemies would soon be forgotten. The favorite food of the sugar beet webworm is the pigweed and lamb's-quarters. The beet leaf hopper relishes the Russian thistle, and sugar beet fields near some uncultivated lands are usually more greatly damaged by this latter pest than are those where there are few weeds. During the earlier part of the year the flea-beetle gives a lot of trouble by perforating the leaves of potatoes, tomatoes and many other of our early garden crops. This small pest passes the earlier part of its life on the roots of weeds. Many of the most destructive of the plant lice spend a portion of their lives on weeds, the remainder of the time they are damaging some particular plant. Thus the rosy apple aphis spends a part of its time on the narrow leaf plantain. The potato aphis that periodically does much damage to the potato in the eastern states also may be found on lamb's-quarters, ragweed and wild lettuce. Weeds not only occupy ground needed for other purposes, taking the nourishment that is needed for our cultivated plants, but they are the bridge that carries many of our worst pests over the winter months.

Clean Farming.



It is a common practice, when a crop has been harvested, to allow the remnants of the plants to remain on the ground all winter. This is true of the stumps of cabbages and cauliflower, and very often of melons and squash vines that have been killed by the frost. The stubble of corn very often proves to be an ideal hibernating place, as does the sheltered ground under the shocks. On the leaves and stumps of cabbages in winter, will be found the eggs and stem-mothers of the cabbage aphis. The writer has bred the adult of the cabbage maggot from rutabagas that had been frozen in the ground all winter. The squash bug and the tarnished plant bugs live under garden refuse, or in sheltered places in the garden all winter. These remnants of the garden are the source of next year's infestation and should be cleaned up and either burned or buried. The man who cleans up the crop refuse around the farm is many times repaid for his labors and the man who does not care to spend the time is conducting a winter resort for our most troublesome insect pests.

Other Practices.

There are many other places where a little care and foresight will save the farmer money by lessening the chances for insect losses. If he can destroy the breeding places or the hibernating places at the time of the year when these spots are vital to the insect's existence he will enjoy a greater freedom from their depredations the following year. For instance, small accumulations of old grain are often left in the corners of the bin when the new grain is placed therein. In this old grain may be found several varieties of insects that eat the germ of the seed, making it unfit for planting. It also causes the grain to heat and acquire a musty, "old" odor that renders it unfit for milling purposes. This old grain with its inhabitants should be destroyed and, if possible, the bin should be fumigated before the new grain is brought in.

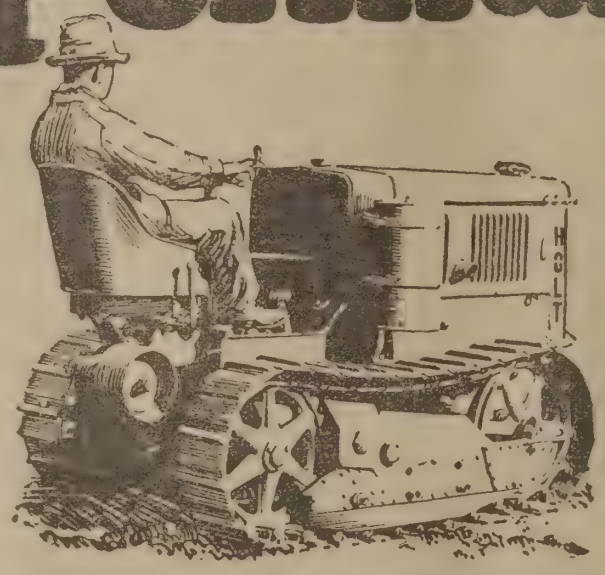
The Buffalo tree hopper does more damage in orchards that are filled with weeds than in those that are kept clean, the weeds supplying a part of its food. The eastern plum curculio, the little snout-beetle that stings apples, plums, cherries and other fruits, spends the winter in the grass and rubbish in or near the orchard. The codling moth often spends the winter under loose bark much of which could be scraped from the trees exposing them to birds and other enemies. Piles of prunings from the orchard, left from year to year, will be a source of infestation of fungous as well as insect enemies.

It would undoubtedly be a big task to clean up and destroy all of the insect hibernating places on the farm, but a little more care from day to day during harvesting, and after, will reduce these places to the minimum. Efficiency in farm practices as outlined will bring in just as great a return for the labor expended as anywhere else on the farm.

They Are Improving

Purebreds Take Places of Scrubs

Fifty-six per cent of the beef and dairy sire in Thurston county are purebred, according to the second annual county-wide survey made by community project leaders in conjunction with other live stock work done by the extension service in the county last year. This survey brought out 554 returns, as against 188 the year before, and showed 5632 beef and dairy cows in the county. The federal census showed 6860 dairy cows, so the farm bureau survey is regarded as fairly comprehensive. Beef and dairy sires numbered 233, of which 131 are purebred. From the survey blanks a list of owners of purebreds of different breeds was compiled and published, also a list of scrub and grade owners, which was used to advantage by breeders who had stock to sell. Live stock project leaders also used the names on the list as "prospects," and bankers of the county who saw it urged that purebreds replace the poorer stock.



At the same time the survey was taken, project leaders carried purebred sire enrollment blanks, and a total of 54 farmers signed agreements to use only "better sires." This list was published, also, and the work has so stimulated other activities along this line that records show 30 purebred dairy sires and 23 females placed in the county this year, County Agent E. B. Stookey reported.

This was only part of the live stock work, however. Seven farms were visited in one day and an evening banquet held, on the so-called "west side" tour; judging demonstrations and tours included six half-day excursions in which at least one herd visited was in the cow testing association; two all-day breed tours (Jersey and Holstein) were held, which in effect were judging demonstrations; one three-day institute was held at Rochester; and there were six feeding lectures. Testing for tuberculosis was taken up by project leaders when the survey was on, with a county goal of 149 herds. This work went over "with a bang," for the county agent's records show 181 herds tested, and additional work by state and federal agencies sent the number of herds tested to well over 200.

Assistance was given in forming a Guernsey association, which, in cooperation with the Goldendale bull association, made arrangements to import a carload of females from Wisconsin, but difficulty in finding an agent to purchase the cattle resulted in members buying at the Portland and Chehalis consignment sales. The cow testing association had a very successful year. Among other things brought out was the fact that it took five average cows in the poorest herd in the association to make as much profit as one average cow in the best herd. On the strength of association testing, several unprofitable cows were disposed of for beef, which otherwise might still be boarded by their owners.

"CATERPILLAR" T-35 - THE SUPREME SMALL TRACTOR

Permanence

In little more than a year model T35 *"Caterpillar"* Tractor has established a permanent place for itself in the field of power equipment.

The many years of experience in tractor development and the long period of designing, refinement and testing that preceded the first announcement of the model T35 Tractor, a little more than a year ago, assured its success from the start.

But, though much was expected of this tractor, its actual performance in field service has surpassed the highest hopes. And the recognition, by power users, of its superior merit, has established for the T35 a permanent place in the field of power equipment and developed, in comparatively short time, a tremendous market. Increased demand has necessitated increased production, effecting economies that permitted a $375 reduction in price at the start of the second years' production.

If you have not yet heard the complete story of this "Supreme Small Tractor", let us tell you where you can see it at work, or send you literature descriptive of it, or of the larger sizes of the "Caterpillar" Tractor—the 5-ton, Western 10-ton, or 75-horsepower.

Irrigation Institute Urges State Reclamation Policy

By ELIAS NELSON, Yakima, Wash.

Refutation of the oft heard contention that there is no need for further land reclamation since agriculture is now sick was the outsanding feature of the 10th annual meeting of the Washington irrigation institutee at Yakima on November 24-25. The sentiment in the institute was unanimous for no halt in the program of bringing more lands under cultivation, whether by irrigation, drainage or clearing of cut-over lands. Many concrete recommendations, designed to promote successful prosecution of agricultural development were made. Why agriculture is not expanding to meet economic needs was thoroughly discussed and decision upon a definite state policy of land development was favored. In point of valuable suggestions made for future policies in the agricultural progress in the state, the institute maintained its recognized value as an institution.

The organization now has 134 life members and 118 annual members, with about 150 members in attendance. Many addresses were upon the program, but the time was short, there being only three sessions, and discussion was, therefore, rather limited or excluded entirely because of lack of time. Undoubtedly much good from more deliberate discussion was lost through lack of time, and it appears that two days were by far too short a time for a vital meeting of this character.

Advocates Reclamation Policy.

An exhaustive discussion of the question whether there is a need for additional reclamation in the northwest by Professor O. L. Waller of the Washington State college was replete with facts and irrifutable arguments for continuance of developments along such lines. He showed that large acreages of land, once under cultivation or attempted cultivation in the New England states and elsewhere in the United States were going back to forests from which, he said, they should never have been denuded.

In view of large acreages of such lands going back and the fact that nearly all easily available agricultural lands in the United States are now occupied he stressed the necessity of continued development of lands to take the place of these being abandoned. He showed that the per capita increase in cultivated lands was not keeping pace with the increase in population, also increase in food production is not at all commensurate with the growth of the nation, he said.

A definite land development policy for the state was urged by Professor Waller and he declared that this should be outlined and all lands classified and their prospective value as agricultural lands be determined and a policy for reclamation worked out along constructive and economic principles. If there is to be settlement and people are to be induced to come upon the land they must be shown what chance they have to make a living upon them.

Must Have Sound Basis.

Why it is that settlers are not as plentiful now and why agriculture is not adequately attractive as an industry was discussed by Thomas B. Hill, assistant secretary of the Seattle Chamber of Commerce, in an address on "Bridging the Gap—Some Economic and Social Factors in Land Settlement." He declared that agriculture was sick and that the returns from it were no longer attracting new blood. He attributed this to changed social conditions and the various causes of unrest, such as high cost of living and heavy taxation burdens. There are too high values placed upon raw land and there is greatly increased cost of construction and development. Also there is increased cost of distribution, due in part to the shift of population from country to city and to increased service demanded.

He pointed out that formerly there was no competition against land settlement in the west, while now every state is bidding for settlers, and stated that many states have evolved a land settlement policy, notably Wisconsin. Land settlement must be placed upon more sound business methods and this involves constructive legislation and adequate financing. He recommended development of more efficient and economical system of distribution of farm products. Coming, as this recommendation did, from a representative of the business interests of a large city, it is significant of the changing attitude of business men toward the farming industry.

Want Capable Settlers.

Coupled with adequate financing and more orderly distribution should be intelligent weeding out of those applicants for land settlement who are unfit, supervision and direction of the operations of the settlers and guiding them into proper channels of community and social life. Merely placing men upon the land is not sufficient; there must be assurance that they are of the right sort and that they are placed in the way of making a success.

Irrigation development from the angle of increasing taxable wealth was discussed by D. A. Scott, director of the state department of conservation and development. Great progress along such lines in other countries than ours and the wonderful development in the Yakima valley and elsewhere in the state of Washington has been a fertile source of taxable wealth.

E. F. Benson, manager of the department of immigration and industry of the Northern Pacific, in an address upon the subject of "What Others Are Doing in Land Settlement Work," enlarged upon the idea that the settlers should not be left to work out their own salvation, but should be directed into proper methods of farm management through education and actual material assistance.

Would Change the Law.

Two changes in the irrigation district law were recommended by R. B. Williamson of Yakima, who has, through long experience, intimate acquaintance with irrigation laws. The state department of conservation and development should be given larger power of supervision over irrigation districts in order that more sound business policies may obtain in the management of such districts, he declared. He emphasized also the point that the problem of financing irrigation districts being great and perplexing in most instances, coupled with the necessity of adequately protecting the bond holders even against the irrigation districts themselves, appears to call for a limitation on the amount of indebtedness that can be legally incurred. That the irrigation district securities be of unquestioned value is of paramount importance and the problem at this time is how to make them so. His suggestion for limitation of indebtedness was not approved by a number of members of the institute present.

Further, Mr. Williamson threw out two concrete suggestions: First, that it is wrong to tax lands just being brought under irrigation on their speculative value. New lands as soon as water is available are taxed in that way and the principle is economically unsound. It may be fair to the speculator, but not to the settler, and for him to pay taxes on a value which is not there is manifestly unjust and places heavy burdens upon him, said the speaker. There should be placed a taxable value upon such lands only after development and not until the farmer has through his work created that value. If a change to such a plan of taxation were made the settler would be enabled to pay the interest on the bonds as readily as the construction charges. Instead of the profit from increased value of the land going into the speculative pocket it should go into the construction of the irrigation system. Premature taxation is a direct hamper on irrigation development, and the state laws should be enacted to give the state powers to condemn lands coming under new projects so as to obviate this hindrance to the success of the settler.

If this were done, all the projects in central Washington, where the construction cost and the cost of the land together does not exceed $225 per acre, could readily be brought under irrigation, it was declared. In the land development in the Yakima valley, the raw land has cost as much as the construction of the water system and it will be admitted that general farming lands can not stand a higher valuation than $250 per acre, hence the maximum cost of development must not exceed $250 per acre.

The construction cost on the projects in prospect in the Yakima valley is now estimated at about $150 per acre. It was argued that the state should enact laws so as to enable it to condemn lands and to sell the land and the water right at a fixed value per acre.

Make Bonds Gilt Edge.

The second suggestion made by Mr. Williamson was that the governor and the legislature should be thoroughly informed as to the merits of the certification bill, as he regards the certification of irrigation district bonds as a vital necessity for interesting capital in irrigation development. Such laws are in force in California and Oregon. A number of members present were not in accord with this proposal, as it was feared by them that it might tend to exclude meritorous projects in some instances.

Wants Cooperative Marketing.

The growing recognition of the propriety of the farmers themselves taking a hand in the marketing of their products was pointed out by W. B. Armstrong, president of the Washington Farm Bureau federation, in an address before the institute. "The question of stabilizing our agriculture is the uppermost question of the day, for we realize now more than ever that agriculture is the basic or foundation industry of our economic system and, therefore, its instability is shared by all the other departments of industry," said Mr. Armstrong.

"Those questions are receiving from the United States department of agriculture quite a changed attitude from that which has prevailed in the past. In the olden time the department was generally regarded as the essential department of the farmer instead of the public's food department and that department acted upon the belief that the farmers' only concern was production.

"The great change which has taken place in the department's attitude is now shown by its advocacy of farmers' cooperative organizations, for it has become recognized by all students that it is only through organization that the farmers' problems can be solved. To some of us who have stood for cooperation for years it is a source of wonderment how it could be thought that the farmer had no other concern than to produce and had no responsibility for the distribution of his products. It was, however, thought quite the proper thing for the manufacturers of soap or sewing machines to have selling departments organized for the orderly marketing of their products.

"In the matter of finance farmers have been much hampered. The trouble about capital has been that our financial system was never designed to help farmers market their products in an orderly way.

"I would like to point out that the reason the financial arrangements did not fit was because the farmer had neglected the matter. He was not organized to study and explain his needs with relations to the banks or other business institutions, but a changing attitude in the minds of legislators, bankers and business men generally is manifesting itself."

W. C. Muldrow of Kennewick, manager of the Columbia irrigation district, gave a report on concrete canal linings, based upon an examination of practically all such works in the state of Washington and in British Columbia. He found that the kind of mixture was more important than the thickness and that adequate drainage of the soil underneath the concrete was of prime importance. Frost is the enemy of concrete canal linings.

J. C. Scott, manager of the White Bluffs-Hanford state soldiers' settlement project, told of the difficulties, of which there were many, in the development, and the progress made to date. This is an early crop district, the elevation being only 400 feet. Forty wells are already developed and 24 settlers accepted of which 15 are on their places. There has been cleared 122 acres to date and 56 were in crops the last season.

A. L. Smith of Spokane gave an account of the construction features of the Horse Heaven project.

The Resolutions.

The resolutions passed included indorsement of the McNary-Smith bill, request for additional appropriation by the state for stream measurements, advocacy of a law requiring irrigation companies and water users to file annual reports on the use of water, commendation of the work of the branch irrigation experiment station at Prosser and recommendation that real estate dealers be licensed.

Officers elected for the ensuing year are: Ralph Kauffman, Ellensburg, president; W. T. Clark Wenatchee first vice president; S. J. Harrison, Benton City, second vice president; G. A. Phillips of Spokane, R. B. Williamson of Yakima and R. K. Tiffany of Spokane, directors.

Must Standardize Potatoes

Northwest Conference Takes Steps Toward Betterment

Standardizing and stabilizing the potato industry of the Pacific northwest were the outstanding themes of the Northwest Potato show and conference at Spokane last week. Especial stress was laid on the possibilities of seed potato production in this and neighboring states and upon the essential points in producing seed of highest character.

Steps were taken looking toward the ultimate adoption of commercial grades and standards uniform throughout the four northwest states and based upon conditions peculiar to this territory. The conference authorized its officers to urge the department of agriculture at Washington to send a potato expert west to make a personal study of conditions prevailing here with a view to including in the 1923 federal grades and standards provisions equitable to the producers in Washington, Oregon, Idaho and Montana.

George J. Cannon of Buckeye, Wash., was reelected president of the conference, with E. R. Bennett of Boise, Idaho, reelected secretary-treasurer. State vice presidents were chosen as follows: Montana, T. B. Haynes, Creston; Idaho, H. F. Schedler, Sandpoint; Oregon, M. G. Coe, Bend; Washington, R. C. McCroskey, Garfield.

The Potato Show.

The showing of potatoes was small, but of much higher quality than a year ago. This was due to two facts: That producers last year learned the kind of potatoes that should be shown and that they are producing better tubers than a year ago.

Idaho took a large share of the awards with growers of Washington, Oregon and Montana each taking a fair number. The sweepstakes prize went to C. O. Fisher, Dudley, Idaho, on his exhibit of Netted Gem seed. The sweepstakes prize was a $130 modern seeder. His exhibit scored 981 points.

In the awards, which follow, the figures indicate the score of the respective exhibits:

Seed Potatoes.

Netted Gems—First, Charles O. Fisher, Dudley, Idaho (981); second, Weber Brothers, Rose Lake, Idaho (976); third, C. R. Geiger, Bend, Ore. (966); fourth, A. E. Skidmore & Son, Colville, Wash. (962).

Idaho Rural—First, Albert Satterlee, Samuels, Idaho (974); second, H. H. Cummings, Sandpoint, Idaho (972); third, Harold F. Brown, Belmont, Idaho (969); fourth, List & Bierlein, Sandpoint, Idaho (965).

Burbank—Fourth, Charles H. Greeley, Vancouver, Wash. (870).

THE WASHINGTON FARMER

VOL. XLVII. NO. 22.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.
SEATTLE, WASH., Office, 617 Central Bldg.
To either of which communications can be sent, but to avoid delay address office nearest you.

Member
Audit Bureau of Circulation,
Associated Farm Papers.
Agricultural Publishers' Association.

Eastern Representatives:
S. E. Leith, Fifth Avenue building .....New York
F. H. Bell, Steger building..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Hurrah for Washington!

The farmers and live stock men of this state are deserving of congratulation on their forward movement in the upbuilding of the quality of the live stock they produce. The eradication of tuberculosis in cattle is one of the essentials in a permanent live stock industry, and it is gratifying to find recognition of Washington's progress in this direction:

"Washington is expected to be the first of the 48 states to make definite plans to wipe out all bovine tuberculosis within its borders. In 20 of the 39 counties area eradication work has already been conducted," says the United States department of agriculture. "The commissioner of agriculture and the state veterinarian have planned a state-wide program that will be presented to the legislature in January. The governor is understood to be in favor of the plan, and there is every reason to believe that sufficient money will be appropriated so that with the cooperation of the department on the present basis all the cattle in the state can be tested within a reasonable time, probably two years.

"The light infection of the cattle herds in the state and the fact that most of the cattle already have been tested make the outlook particularly promising. An indication of the low percentage of tuberculosis was found in Spokane county this summer. The veterinarian in charge tested 469 herds, containing 2754 animals, and condemned only 4.

"Ninety-five per cent of the purebred herds in Washington are already under supervision."

A Lasting Christmas Gift

The season is almost at hand when children put in deep thought over lists of the many things they want for Christmas—building blocks, dolls, a coaster or a pair of skates. For weeks before, this list is gone over, new toys are added, and old ones crossed off. The expectation of the youngsters is one of the happiest features of the Yuletide season.

Are we as parents doing our part in this pre-Christmas planning? Are we merely going to check the list of inanimate toys which are so easily destroyed or is there a better plan?

Last year one western Washington farm boy drew from his stocking early Christmas morning a long yellow envelope. He turned it over and over, eyeing it with wonder. When he opened it he found the registration certificate of a purebred calf, on which his own name had been inserted after the word "owner." Nor did he fully realize what the gift meant until later in the day when he went with his father to another part of the valley and helped load the calf into the car. Truly the calf was much like those in his father's herd, except that this one was his own. He would care for it as never a calf was cared for before.

Needless to say the toys on this boy's list were forgotten, but the calf lived on and flourished under the careful supervision of this youthful live stock breeder.

Are there not hundreds of boys in Washington who would rather have the registration papers of a pig, a lamb, or perhaps rabbits than anything on their original list?

Let's Have Higher Producing Cows

The writer recently had the privilege—which belonged to the thousands of people who attended the Pacific International Live Stock show—of looking upon the two outstanding cows in the dairy world. Segis Pietertje (just say Peter and add je to it) Prospect, the Holstein cow that has beaten all others in milk production, averaged 12 gallons of milk a day for a full year, with butter fat enough to make about 1446 pounds of butter, or nearly four pounds a day. Lad's Iota, the Jersey cow that holds the world butter fat record for her breed, averaged just a little more than three and a half pounds of butter a day for a full year.

As I looked upon these great cows I thought of old Brindle. Dear old Brindle used to give about one-eighth as much milk as does Prospect and mother made about half as much butter in a week from it as could be made from Prospect's daily flow. Corresponding comparisons could be made as effectively between Brindle and Iota.

It made the choreboy's arm ache just as badly to tug away at old Brindle's leathery teats as it would to milk Prospect or Iota—probably more so. Brindle took up just as much room in the barn or barn lot and consumed just as much grass in the pasture. She consumed much larger amounts of a small boy's patience than would either of these well-bred animals.

But lay no blame on the stoneless grave of the poor old cow. She was a scrub, but it was not her fault. She did not choose her parents. Neither did any one else choose them. They just happened, and Brindle was the next generation of happenstance. Not only that, but Brindle did not have the best treatment in the world. She often lay out in the corral at night—sometimes on a rainy or a frosty night. She had some carrots or potatoes and hay, now and then, with sometimes a little ground wheat or corn on the cob or possibly shorts. Most of her living and the wherewithal to make that gallon and a half of milk she found in the pasture that was not always as good as it might have been.

Not so the cow of the new day. We are learning to select the parents of our milch cows. Prospect is a daughter of a sire with production records behind him. Likewise the blood of high production flowed in the veins of her dam. So also with Iota and every other first class cow. And these cows do not sleep out in the rain and sleet. They do not break the ice in troughs with their noses on cold winter mornings. They do not get nondescript rations—just whatever is handy and in whatever amounts fancy may suggest. They are fed and otherwise cared for with scientific precision, and in their rations are kindness and orderliness.

Do not blame Brindle. Do not fall down to worship the present day supercow. But get rid of the scrub wherever she appears and substitute in her stead a good cow of known breeding. Unless you want to be an exceptional dairyman or breeder, do not try to beat the records of Prospect and Iota. But unless you are a failure at the game and content to remain so, try to beat old Brindle's.

LOOKING INTO OTHER FARM FIELDS

The United States cranberry crop, October 1, showed an increase over the estimate of September 1 of 55,000 barrels. In Wisconsin harvesting is about over. New Jersey is through picking, while in Massachusetts the crop is still coming in from the bogs.

* * *

The latest official report of area and production of linseed in British India is 17,360,000 pounds for the crop of 1921-22, compared with 10,800,000 pounds for the previous season and 20,466,000 pounds for the average of the five years, 1909-14. The increase for 1921-22, 2,993,000, was smaller by about 9,000,000 acres than the average for 1909-14.

* * *

The Southern Pacific company announced recently that it had contracted for the immediate construction of 7000 freight cars, to cost $8,000,000, says a San Francisco report. The equipment will be delivered next year, a large proportion being constructed on the Pacific coast. The Pacific Fruit Express, in which the Southern Pacific owns a one-half interest, also has a big refrigerator car building program under way.

State Farm News

Francis H. Fassett is setting out four acres of Royal Ann cherries and four of Montmorency sours on his place north of Yakima. He has signed a contract with Libby, McNeill & Libby for 15 years, at a guaranteed price of 6 cents a pound at the cannery.

* * *

John W. Langdon, manager of the Stanton Investment company's 600-acre apple orchard at Walla Walla and one of the leading promoters of the gardening interests in and about that city, has been elected head of the newly organized Walla Walla Lettuce Growers' association.

* * *

Nine hundred selected lambs were recently purchased in Kittitas county for the Prosser branch experiment station by Superintendent Roy P. Bean, for use in continuing a series of experiments with feeders. Last year Bean not only secured results of much value to all feeders of sheep, but also cleaned up a neat profit for the station.

* * *

The first starch factory constructed in the state will be in operation at Toppenish this month. About 800 tons of cull potatoes have been contracted and Manager G. C. Gifford says that the plant will have all the raw material it will be able to use this winter. About 10,000 tons of potatoes are going into storage in warehouses and a large part of them will be available for the starch factory.

* * *

The entire crop of alfalfa grown on the S. B. Rhine ranch, east of Prosser, has been sold to Mercer & Hill, sheepmen. The crop consists of 142 tons harvested from 19 acres, an average yield of nearly eight tons an acre. The total price was $1445 in the stack. The hay is in one immense stack on the Rhine place and has attracted much attention.

* * *

Announcement was made recently at Port Angeles that the Clallam Lumber company and the Blodel-Donovan Lumber company were prepared to log their 6,000,000,000 feet of timber between Fairholm and Quillayute prairie. Work on construction of the railroad will commence in the spring of 1923 and a large crew of men will be placed in the woods for railroad construction and logging work. This will tend to stimulate the market for farm produce in that section.

* * *

A huge paper mill, representing an investment of $1,500,000, will be constructed at Vancouver, Wash., on the waterfront site of the old Pittock-Leadbetter Mill company, it was announced by representatives of the California-Oregon paper mills. Construction of a sawmill will start immediately, to be followed by that of the paper plant. The interest of the California-Oregon company will be transferred to a new corporation known as the Columbia River Paper mills.

* * *

Tacoma has been granted permits by Marvin Chase, supervisor of hydraulics, at Olympia, to divert water from the north fork of the Skykomish river for power purposes and to construct the Lake Cushman reservoir to store 190,000 acre feet of water. The issuance of the permits has been held in abeyance for some time pending the settlement of litigation between the city and the state fisheries board over the appropriation of the water. The estimated cost of building the reservoir is $1,768,000 and for generating 75,000 horsepower the cost will be approximately $6,000,000.

* * *

In the 1922 crop a number of the larger grape vineyards in the Grapeview district of Mason county, formerly known as Detroit, has been estimated at 17,000 baskets. The total from the entire district is estimated at 20,000 baskets, or approximately 50 tons. This figure, however, does not include Harstine island and some of the other sections of the county, which if included would bring the total much higher. Growers have taken extra care not to market the fruit until well ripened, which is very essential for some of the varieties. The market this year was handled in good shape, and the growers report a fair price for their product.

* * *

Puget sound celery growers have the local celery market well in hand and are providing for storages that will take care of the local demand through the holidays, says a report from Seattle. For the first time in the history of the industry it will not be necessary to bring in any stock from California. There has been no loss by freezing so far this season.

There is a brisk eastern demand for Puget sound celery and growers are getting 50 cents per dozen stalks f. o. b. for eastern carload shipment, with 75 cents for the Western avenue trade. It is estimated that from 8000 to 10,000 crates of Puget sound celery have already been stored for the Thanksgiving and holiday trade.

* * *

The Utah-Idaho Sugar company recently distributed $108,000, the amount representing about 60 per cent of the payments that will be made to the beet growers this year in the Toppenish district. This payment covers the amount due the farmers for 18,000 tons of beets delivered to the factory during October. An additional 12,000 tons was handled at the sugar factory in November. The big plant at Toppenish has been in operation night and day and has completed the season's run. The factory during the operating season has employed 250 men, the payroll aggregating $18,000 a month. Final settlement with growers will me February 1. Beet growers are about the only producers in the valley who have not been affected by the car shortage. Their output, delivered at the factory, finds an immediate market at a stipulated price.

* * *

W. H. Paulhamus, president of the Puyallup & Summer Fruit Growers' association, announced recently that the price of evergreen blackberries of shipping quality for the season of 1922 has exceeded by an average of 2 cents a pound the price received by the members of that organization in 1921. The net average to the grower is this year $1.62 a crate, whereas the average price last year was $1.60. Deducting the association charge of 6 cents per crate, covering cost of handling the business, leaves a net return to the grower of $1.56 per crate for evergreen blackberries. "In face of the fact," says Mr. Paulhamus, "that all these berries were marketed during the period that the railroad strike was at its height, under which conditions it was necessary for the shippers to combat many unsatisfactory conditions in order to produce results, the final results are certainly gratifying. An average return of $2.18 on red raspberries, $2.03 per crate on loganberries and $1.62 per crate on Evergreen blackberries, as against the very unsatisfactory conditions prevailing in the marketing of fruits from many other sections of the country should be very pleasing to the growers of the Puyallup valley."

FARM BUSINESS AND MARKETS OUTLOOK

The conclusions of the committee for economic research of Harvard university are based on the most complete statistical analysis of the business situation that has yet been made so that they deserve considerable weight. This committee has recently expressed the following view of the business prospect:

"The recent decline of stock prices has served to generate considerable pessimism, and has led to statements that business conditions have not improved to the extent anticipated, or that the improvement which has taken place will be of a temporary and illusory character. In view of the case, such misgivings are as unjustified today as they were last January, or even earlier, when business first began to emerge from the trough of the depression.

"At every stage since the turning voint in 1921 vessimists have been able to find a multitude of more or less plausible reasons why business could not possibly improve; nevertheless, improvement has developed in the natural course of a normal business cycle. Our "Index of Manufacturers" has arisen to substantially the normal level and the widespread unemployment which existed a year ago has been replaced by an actual scarcity of labor in many localities. These facts seem to leave no doubt as to the character of the movement now under way. Our forecast, therefore, remains unchanged. We forecast an upward movement of prices and further expansion of business activity, with the strong possibility of continuation of the upward swing during the second half of next year."

John Moody, a financial authority whose forecasts of the trend of business have been remarkably close to the mark in the past two years, takes a different attitude as to what may happen after the middle of next year.

Mr. Moody says that "it seems a foregone conclusion that the immediate future of American business is not indicative of a boom; that reaction from the present revival is not many months ahead of us, and that, while the first few months of 1923 may be relatively prosperous, we may run into a period of deflation before the end of 1923.

"What may reasonably happen in 1923 in the security markets is a sharp culmination of the recent long rise in stock prices in the early part of the year; a moderate strain on the money market during the winter and spring, followed by a pronounced ease in interest rates later on, with bond prices holding for a while, then sharply weakening, and finally setting in for a renewed rise, which may be of long duration.

"The only possibility to change this picture would be unexpectedly favorable developments in Europe, but which are not in sight."

Mr. Moody bases his conclusion that the present upward swing will culminate some time next year on the fact that the American farmer, representing one-third of our population, is not receiving an equal chance at prosperity and is unlikely to receive it until Europe is led out of the wilderness and foreign markets for farm products are improved.

Cattle Markets Uneven.

Transition stages in the cattle market brought a decidedly uneven trend last week. The fall cleanup is far along at some points, but at others it is at its height. The proportion of low grades and pasture odds and ends rushed in ahead of cold weather varied accordingly. At Chicago another flood of shortfeds arrived and the supply of all classes was the largest in two years. Well finished sorts were the scarcest of the season and another load sold at $13.60, equaling the previous high mark of the year, but cattle fed only 60 to 90 days lost 25 to 40 cents. Beef cows and heifers were weaker except for those in high finish. Veal calves declined 50 to 75 cents, with competition from poultry a factor.

Western rangers evidently were delayed by the car shortage, as the run is holding up later than usual. The proverbial habit of the western cattle industry to "come back" after a period of disaster is indicated by receipts of 234,800 head at Chicago up to November 21, compared with 135,900 head to the same date in 1921 and 269,000 head two years ago.

At present the market is deluged with partly finished cattle, while prime steers are rare, hence the abnormal spread.

Conditions still point to a big run of half-fat steers in January, when those who do not feed regularly are apt to come back to market.

Feeder Shipments Falling Off.

Demand for stocker and feeder cattle has abated to some extent, while the supply has held up at points to which the western range has contributed freely, so that prices have sagged. A drift to cheap light cattle has been noticeable recently.

Hog Prices Nearing Bottom.

Action of the hog market indicates that prices are nearing bottom, although the low point for the winter may not yet have been touched. On every dip big packers buy freely, current prices for hogs and product seem to be affording a profit to the killer, eastern shipping demand is picking up in the middlewest and a run of 720,000 head at the 11 leading markets last week, which was an increase of 120,000 head over the preceeding week, was absorbed at a minor decline. The daily average at Chicago has dropped below $8, but demand promises to become increasingly active on each decline from this level.

The overseas movement is running heavier than last year and stocks abroad are light.

Average weights are running higher than in any recent year.

Feeder Lamb Movement.

Shipments of feeder lambs and sheep from the 12 leading markets in the 15 weeks ended November 10 totaled 1,834,553 head, compared with 1,471,381 head last year and 1,868,025 head two years ago. Apparently the number on feed is about 20 per cent below the average, based on records extending back to 1916. The movement into Colorado feed lots is said to be the largest ever known.

Dressed lamb prices were higher last week and the fat lamb market shows more health, but packers maintain a bearish front and depress the market whenever liberal receipts give them an opportunity.

Good Horses Moving Well.

Good horses are selling to advantage, but plain horses forced in to avoid wintering expense have surfeited the market and are going at bargain prices. Loggers are buying at $175 to $185 at Chicago, while choice drafters are quoted up to $275.

The wool market is quiet, but prices are firm and the trend is upward. Transactions have been confined mostly to Texas fall shorn wools, which are now moving at a high level. There are rumors of attempts to contract next spring's clip in the west, but no actual deals have been reported. Foreign auctions show an upward trend.

The holdings in the hands of the British Australian Wool Realization association on October 31 comprised 1,034,000 bales, a reduction of 856,000 in the last year and 178,000 bales in the two preceding months.

Advance in Wheat Checked.

The advance in the wheat market, which has progressed irregularly for five weeks, has been checked in the last few days. Although milling demand in the northwest continues brisk, at southwestern points it has subsided noticeably. Some export business is under way practically all of the time, mostly in Manitoba wheat, but there is no special urgency to the foreign demand.

Further letup in the demand for flour will not be surprising during the next month, owing to the approach of inventory time.

The close of navigation is expected to draw more of the foreign demand toward the United States, so that the total requirements to be satisfied out of receipts from week to week should be equal to the supply.

Broomhall, the English authority, estimates the surpluses of exporting countries at 816,000,000 bushels. He places the potential requirements of importing countries at 800,000,000 bushels, showing an unusually close adjustment, but he expects financial conditions and the use of substitutes for wheat to reduce the actual purchases about 80,000,000 bushels below estimated needs. In brief, he does not expect any scarcity of actual wheat to develop.

Argentine wheat is receiving more attention, as it is being offered for shipment from the new crop at a price slightly below the prevailing world level. Recent estimates upon the surplus in that country have been higher than those issued earlier in the season, ranging as high as 200,000,000 bushels of old and new wheat combined. New wheat from the Argentine can scarcely reach Europe before the end of February, so that it is too early to determine just how this competition will affect the market.

The wheat situation remains one in which the purchasing power of importing countries and their ability to buy the amount of wheat they need is the chief factor in the market outlook. Thus far an unusual milling demand has more than offset the unfavorable features in the export trade.

Western Demand Dominates Corn.

The west from Colorado to the Coast has been buying corn in Iowa, Illinois and the other surplus states at prices above the usual level compared with Chicago.

Although primary receipts of oats are above the average for this time of year, it is necessary to draw upon the visible supply right along, showing that the rate of disappearance is above normal.

Seed Markets Hold Their Own.

Price changes in clover and grass seeds have been small, but gains in the last six weeks hae been well held. Chicago, per 100 pounds. Clover, $15@20; timothy, $6@6.50. Toledo, per bushel. Prime clover, $12.85; prime timothy, $3.45.

Contrary to the tone in the feed grains, the byproduct feed market is slightly easier. The output of all kinds of feeds is heavy and shipments from producing centers are increasing.,

Prices per ton (100-pound bags) in car lots: Chicago—Bran, $25; standard middlings, $26; flour middlings, $28.50; cottonseed meal, 36 per cent; $47.50; 43 per cent, $53; hominy feed, $30: gluten feed, $37.85; old process oil meal, $52; tankage, $65.

Hay Market Rising.

The hay market shows a disposition to rise. Demand is moderate, but shipments are light, due to a car shortage and stormy weather in surplus districts.

Prices per ton in car lots: Chicago—No. 1 timothy, $22@24; No. 2, $21@22; No. 3, $15@17; No. 1 light clover mixed, $21@22; No. 1 clover, $20@22; No. 1 clover mixed, $20@22; No. 1 alfalfa, $25@27; upland prairie, $20@21; midland prairie, $11@43; rye straw, $14@15; oat and wheat straw, $11@14.

Egg Prices Show Advance.

Last August when coolers were filled with the largest storage stock of eggs ever known and a heavy supply was still coming, fresh eggs sold at Chicago as low as 18 cents. They have advanced since to 55 cents, a gain of 200 per cent. The market is probably near the upper limit, but should hold near this level for a month or so. Storage eggs are working into a stronger position as the rate of distribution seems to be rapid enough to take care of most of the excess by the first of the year.

Poultry receipts have increased and stocks in storage are beginning to accumulate. Prices are holding much better than seemed possible in view of the big increase in production, although they are lower than two months ago.

Butter prices made further gains last week and closed firm, although a nervous undertone was evident, many dealers feeling that the market had practically reached its upper limit. Butter is being offered from New Zealand, but prices, duty paid, are practically on a parity with those in this country and but small quantities have been bought.

Prices on 92 score fresh butter on November 22 were: Chicago, 51c; Boston, 30c; New York, 32c; Philadelphia, 32 1-2c.

The cheese market was steady to firm last week, although a slightly nervous undertone was apparent. Purchases were on a small scale, for the most part, but stocks were cleaned up without concessions having been made.

Prices on No. 1 American cheese on November 22 were: Chicago—Twins, 25 1-4@25 3-4c; single daisies, 25 1-2@26c; double daisies, 25 1-4@25 1-2c; young Americas, 25 1-2@26c; longhorns, 25 1-2@25 3-4c; square prints, 26@26 1-2c.

Fruits and Vegetables.

Shipments of potatoes have fallen off about 50 per cent in the last month and prices at Chicago, a key market, were stronger, although some other points remained weak. The chief drawback to a general advance has been the lack of buying for winter storage as a result of the unfortunate outcome of storage operations last year. Idaho sack Russets are quoted at $1.60 per 100 pounds at Chicago and $1.30 to $1.35 at Kansas City. Bliss Triumphs at Nebraska shipping points are quoted at 70 cents cash track to growers.

Cold storage holdings of barreled apples on November 1 comprised 4,012,000 barrels, the largest number ever reported on that date. Boxed apple holdings were 4,094,000 boxes, compared with 5,464,000 last year and a five-year average of 3,463,000 boxes. With boxed apples reduced to their equivalent in barrels, total holdings were 5,377,000 barrels, the largest for that date on record. The five-year average is 3,938,000 barrels. Receipts of apples remain liberal, but prices are holding firm. Large to medium extra fancy Jonathans are quoted at $1.70 to $2 a box at Chicago, with large to extra large fancy Delicious at $3.

National Grange Takes Stand on Big Issues

MARKED by a small attendance, the national grange, Patrons of Husbandry, in 56th annual session at Wichita, Kan., November 15-24, completed business of national, as well as grange importance.

On the first day's meeting National Master Sherman J. Lowell of New York voiced the stand of the grange on several important legislative measures, particularly ship subsidies.

"The most outstanding legislative issue at present is the proposal for a ship subsidy, which is but one form more of government paternalism, taking from one class of people to help another," he said.

"The only justification for such a proposal is that it might return to the payers its equivalent in enhanced values of commodities or reduce cost of production. Those advocating this measure claim that we can ship out our merchandise cheaper, but are silent on the fact that it will open wider our doors to the agriculture of the world and put us at once in competition with the peasantry just as soon as conditions become stabilized."

In stating the attitude of the grange toward such a measure Mr. Lowell declared there was not a grange in the United States that had challenged the opposition by the national body of the shipping subsidy. He also made a vigorous attack on all forms of paternalism. Liberalism, like socialism and single tax, was decried.

Criticize Department of Education.

Another evil at Washington seen by Lowell was the federal department of education. He maintained that the control of all school systems should be in the hands of the people.

Mr. Lowell called for a sounder policy and procedure in the building of good roads.

National delegations represented by state masters and their wives from 33 states were at the opening session.

The outstanding feature of the meeting was the strong opposition expressed by the grange to government paternalism in any form. This was particularly shown in the stand taken on the Lasker ship subsidy bill now before congress. It was felt that such an act would put America in disastrous and unjust competition with the peasants of other nations. A large part of the session was taken up with the discussion of tax problems.

In general the grange went on record as in favor of lower taxes, assuming that taxes are far too high at present. A nationwide state income tax was also recommended. Tax evasion by issuance of tax-exempt securities or declaration of stock dividends by corporations was commemned and a vigorous resolution by A. S. Goss of Washington calling for the stopping of such practices was passed.

Against Sales Tax.

Another measure that was and will be opposed by the national grange is the sales tax, which was suggested as a means of meeting the cost of the soldiers' bonus.

Closely linked with the question of taxation was the stand of the grange on the payments of war debts owed the United States oy foreign powers. Any cancellation of these debts was opposed by the grange on the grounds that the money for these loans was furnished by the American people, and that if the countries owing the debts do not pay up it will mean a great and needless tax on the people to raise the money wherewith to repay themselves.

A resolution was also passed urging the government to take immediate action on the Muscle Shoals project; that it be leased or sold to private interests or be finished for operation by the government. Whatever its disposal it was resolved that it should be used to the best advantage of American agriculture in the production of nitrates and fertilizers.

Of interest to farmers of the Pacific coast was the condemnation of Japanese immigration by George R. Harrison, state master of California, and the urging of enactment as a law house bill No. 12, 169, which provides for the exclusion of every alien ineligible to citizenship. Orientals are ineligible to American citizenship.

Another resolution called for the deportation of every alien who does not become naturalized within a stipulated time.

Better Farm Credit.

Recommendation of the work of the joint commission on agricultural inquiry was expressed by the national grange. It was urged that the commission continue its work, or that a similar committee be formed, if deemed necessary, to examine the workings of the federal farm loan act, to find whether its original purpose has been carried out, and to provide some means of credit that will enable individual farmers to own their farms.

Drastic need of better marketing facilities in the United States was stressed by Louis J. Tabor, director of agriculture for Ohio.

"Nine-tenths of America's farm crops were produced and sold this year below cost of production to the farmer, yet the consumer is paying all he should be asked to pay," he said. "The remedy for this can be found only in a better marketing organization.

"This is one of the four great problems confronting American agriculture. The others are wise production, elimination of waste and the equalization of taxation."

Great peril was seen for the farmers in the European corn-borer and bovine tuberculosis, and congress was called to help in the eradication of them by liberal appropriations.

More conservative policies in building hard roads were advocated by the national grange. A pay-as-you-go policy was approved. It was strongly urged that all issuance of road bonds be discontinued. It was stated that by issuing bonds a community added $25,000 per mile to the cost of the road.

Against Industrial Court.

An industrial court, modeled after the Kansas industrial court, which was to look after the interests of the people in times of strife between capital and labor under supervision of the national government, was defeated.

Of interest to grangers will be the establishment of the national grange benefit, which will be started immediately and will in due time insure the lives of more than 1,000,000 grangers. Automobile insurance was also established.

Indorsement of the work of the department of agriculture and strong opposition to the proposed transfer of the bureaus of markets and forestry away from that department to the department of labor was voiced by T. C. Atkeson, legislative representative of the national grange at Washington, D. C.

Mr. Atkeson also presented a resolution that congress enact the French-Capper "truth in fabric" bill, as a protection to the cloth buying public and to the husbandry of American sheep.

Opposition of the national grange to the proposed merger of the Armour and Morris packing companies was also voiced by Mr. Atkeson.

Campaign for Membership.

Grange leaders believe that the coming year will see a marked increase in grange membership, as an appropriation of $10,000 has been made for the formation of new granges and a national publicity bureau created.

No election of officers was held at this Wichita session. The election will take place at the session next year, which will be held in Pittsburgh, Pa., at a date to be set later.

RESOLUTIONS ARE SOUND.

We like the sound, progressive resolutions adopted by the national grange as outlined in the foregoing report. Take, for instance, the resolution against further issues of tax-exempt securities, with a proviso that so long as such securities are permitted no repeal should be made of the tax-exempt feature of the federal farm loan act. This is broad and fair. The grange is willing to forego the tax-exempt feature of the federal farm loan bonds provided that the government will see that what is sauce for the goose is also sauce for the gander.

The grange took a sound, American position on immigration. It calls for the deportation of all persons who seek to destroy the American form of government, and asks that foreigners be admitted to this country only on provision that they become American citizens within a reasonable period. We are glad also to note that the national grange reflected the spirit of the Pacific coast membership when it voiced its approval of the enactment of a law to deny permanent residence to all aliens ineligible to citicenship. This is intended as a wise check on Japanese immigration and acquisition of the rich agricultural lands of the Pacific coast by Asiatics.

Another resolution that meets with our unbounded approval is the one demanding that all debts owed to the United States government by foreign powers be paid. The resolution truly declares that the money lent to these foreign governments was granted by the thrift and labor of the American people, and if these debts are not repaid the American people will be taxed heavily to repay them.

The propaganda in support of cancellation of these debts is ridiculous. It is based on the false theory that the allies borrowed about $11,000,000,000 of American money and exended it exclusively for the benefit of the American people. As a matter of fact, a considerable part of the borrowed money was used by the allied governments in payment of debts which they had contracted prior to our entrance into the war. Another part of the borrowed billions went to buy food supplies for the civilian part of their populations. Other parts went to subsidize British, French and Italian agriculture and industries. A fact not generally known to the American people is that nearly $2,000,000,000 of the borrowed money was paid over to the allied governments after the war was over and was used in the reduction of their debts, the rehabilitation of their industries, the building of ships for their merchant marine and some part of it in the extension of their commerce to all parts of the world in competition with American commerce. The selfish proposal is an insult to the intelligence and sense of justice of the American people. It is doubtful if it would have had serious consideration on this side of the Atlantic if it had not been for some American international bankers who want the ally debts canceled so that they can collect the $5,000,000,000 or $6,000,000,000 which they had loaned to the warring countries before America was drawn into the conflict.

We hope the grange and all other American agricultural organizations will hit this outrageous proposition a body blow at every opportunity.

The national grange adopted other sound and patriotic resolutions. With possibly one or two exceptions we can heartily commend and support the sensible, patriotic, well thought out program embraced in the Wichita resolutions. The one notable exception is that favoring an income tax in every state of the Union. We think it is true, as the grange officials decalre, that greater equality of taxation will result if all states enact such a law, but we doubt the wisdom of the adoption of such laws at this time, when taxes are so burdensome and the whole pressure of the grange and other organizations should be for retrenchment and reduction, rather than to seek out new sources of public revenues.

The need at this moment is to put on the brakes, rather than supply more grease for the skids. We have had deflation of industry, and the farmer had to take his first of all and in the heaviest doses. We are gradually getting deflation in other industries, and to a considerable extent there has been deflation in the wages of labor. The cost of government, especially in the states, counties, cities and towns, has had little deflation, and in our judgment there will be no deflation at all if the people obligingly vote for state income taxes to replenish the treasuries of states, counties and municipalities. Let us first have deflation in taxes, and when that is accomplished we can turn our attention to a fairer distribution of the burden. Our objection to this resolution of the grange is on considerations of expediency. We are for it in principle, when the proper time comes for its application.

For the reason that we are opposed to a state income tax now, in addition to the federal income tax, we are thoroughly in accord with the resolution unanimously adoted at Wichita in opposition to a sales tax in any form. The sales tax would simply be another easy means of getting additional taxes out of the people, when the necessity of the hour is to put on the compressor and compel vigorous retrenchment—at Washington, at the state capitals and at the county seats in every state in the Union.—Editor.

The First Thanksgiving Proclamation

Was Issued by Abraham Lincoln in the Gloom of a Civil War

IT has pleased Almighty God to prolong our national life another year, defending us with his guardian care against unfriendly designs from abroad, and vouchsafing to us in His mercy many and signal victories over the enemy, who is of our own household. It has also pleased our Heavenly Father to favor as well our citizens in their homes, as our soldiers in their camps and our sailors on the rivers and seas, with unusual health. He has largely augmented our free population by emancipation and immigration, while He has opened to us new sources of wealth, and has crowned the labor of our working men in every department of industry with abundant rewards. Moreover, He has been pleased to animate and inspire our minds and hearts with fortitude, courage and resolution sufficient for the great trial of Civil war into which we have been brought by our adherence as a nation to the cause of freedom and humanity, and to afford to us reasonable hopes of an ultimate and happy deliverance from all our dangers and afflictions.

Now, therefore, I, Abraham Lincoln, president of the United States, do hereby appoint and set apart the last Thursday of November, next, as a day which I desire to be observed by all my fellow-citizens, wherever they may be, as a day of thanksgiving and praise to Almighty God, the beneficent Creator and Ruler of the Universe. And I do further recommend to my fellow-citizens aforesaid, that, on that occasion, they do reverently humble themselves in the dust, and from thence offer up penitent and fervent prayers and supplications to the Great Dispenser of events for a return of the inestimable blessings of peace, union and harmony throughout the land which it has pleased Him to assign as a dwelling place for ourselves and our posterity throughout all generations.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this twentieth day of October, in the year of our Lord, one thousand eight hundred and sixty-four, and of the independence of the United States the eighty-ninth.

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

Previous to the issuance of the foregoing proclamation, several New England states governors had proclaimed state holidays known as Thanksgiving days. The proclamation by President Lincoln was the first directing the people of the entire nation to observe a common day of thanksgiving.

Willis Guernsey Sale

The complete dispersal sale of the Orchard Hill farm Guernsey herd at Redmond November 22, owned by Dr. Park Weed Willis, brought out over 300 bidders, some from remote parts of the state, and some from Oregon and California. The lively bidding for the daughters and granddaughters of Sammanish Topsy emphasized the keen demand for well selected dairy cattle in the northwest.

The entire herd of 43 animals brought a total of $12,733, or an average of $296. Dr. Willis expressed himself as being well pleased with the outcome. While the greater number of the mature females sold for between $200 and $500 there was one outstanding top, Glenwood Princess Pat of Orchard Hill, a daughter of Sammanish Topsy, that was bid off at $645 to N. B. McCord of Lynden. Her sire was Royal Combination of Westmoorland, the sire also of a number of Orchard Hill females.

Most of the animals went to western Washington breeders, while two were taken to Ellensburg and one to The Dalles, Ore. Eight head were purchased by M. Falk of San Francisco for Troutmere, a country estate at LaHonda, Cal. While Dr. Willis offered credit by special arrangement before the sale, there were few who bought except for cash.

The sale was held at the farm in a large tent. George A. Gue of Yakima cried the sale, while C. E. Payne of Tacoma worked the ring.

The animals sold, the prices and the purchasers are:

Topsy's Robin Hood of Orchard Hill, W. A. Peterson, Renton, $330; Chicona Victor, M. Falk, San Francisco, $510; Topsy's Twinkle of Orchard Hill, J. M. Olson, Elma, $230; Skylark Topsy of Orchard Hill, J. M. Olson, $250; May King's Golden Glow of Orchard Hill, L. R. Palmer, Arlington, $405; Topsy's Captain Barlow of Orchard Hill, W. H. Kirschner, Kent, $335; Topsy's Valley Maid of Orchard Hill, W. D. Nettleton, Seattle, $400; Red Wing of Orchard Hill, Falk, $250; May King's Fire-Fly of Orchard Hill, Henry Brooks, Gold Bar, $400; Glenwood's Bright Light of Orchard Hill, W. H. Jackson, Ellensburg, $285; Flossy Topsy of Orchard Hill, J. M. Olson, $320; Wanda Topsy of Orchard Hill, M. Falk, $500; Glenwood Jolly Tar of Orchard Hill, Brisco School, Kent, $240; Glenwood Bo Peep of Orchard Hill, M. Falk, $350; Katie-Did of Orchard Hill, W. B. Nettleton, $370; Roxie Topsy of Orchard Hill, L. R. Palmer, $310; Sammamish Roxie, W. A. Peterson, Renton, $10; Topsy's Maid of Honor of Orchard Hill, J. M. Olson, $300; bull calf (unnamed), A. E. Griffith Jr., Kirkland, $155; May King's Peggie of Orchard Hill, W. H. Jackson, $265; Ruth Topsy of Orchard Hill, John Ford, Tolt, $265; Juneau Topsy of Orchard Hill, M. Falk, $235; Mythop Sequel Dorothy of Vashon, R. N. Chambers, Roy, $275; Delena S., John Ford, Tolt, $255; April Girl 2d, G. A. Berduin, Lynden, $110; Carnation's Glenwood of Orchard Hill, Thomas Klindt, The Dalles, Ore., $200; Little Red Riding Hood of Orchard Hill, J. M. Olson, $210; Glenwood Spring Maid of Orchard Hill, W. B. Nettleton, $430; Sequel's Milk Maid of Vashon, Olson, $205; Idlewild of Orchard Hill, J. M. Olson, $235; Anna Laurie of Orchard Hill, J. T. Ray, Auburn, $335; Gypsie Girl of Orchard Hill, C. J. Lawson, Puyallup, $500; Glenwood Princess Pat of Orchard Hill, N. B. McCord, Washington, $645; Glenwood Bo Peep of Orchard Hill, Peter Norgaard, Stanwood, $230; unnamed heifer calf, M. Falk, $200; Katie-Did of Orchard Hill, H. W. A. Tramm, Chehalis, $225; unnamed heifer calf, J. M. Olson, $215; unnamed heifer calf, David Whitcomb, Seattle, $80; Glenwood Silver Bells of Orchard Hill, M. Falk, $350; unnamed heifer calf, E. W. Conradi, Kent, $160; Cleo Topsy of Orchard Hill, J. M. Olson, $230; Wildwood Rose of Orchard Hill, John Ford, $375; unnamed heifer calf, M. Falk, $150.

CHANGE THE HOG PEN.

It is not sufficient merely to clean out the hog pen now and then. It can not be cleaned out. The only way to have a clean place for the hogs is to try to clean it out and then change the location. Plow up the old pen and crop it a year or two and you will avoid many hog ailments, the germs of which live over in the polluted soil of the pen.

Berries and Hens

Found to Be Good Combination

The farmer who has a well-chosen variety of crops has advantage over the one who depends on a main crop for his total income; yet, in some cases, there is danger of getting too much diversification, resulting in some of the work being slighted or left undone, according to Sigurd Hendrikson, a berry grower and poultryman, of Puyallup. Mr. Hendrikson has but seven acres of berry land southwest of town, but finds that he has little time to spare after giving his fields the proper attention.

"In fact, I feel that I have just a little too much of a variety on the place," said Mr. Hendrikson, "and I am planning on making more of a specialty of berries and poultry in order that the work can be done more systematically. The two lines go together very well and, since Mrs. Hendrikson looks after gathering the eggs and feeding the mash, it gives me practically all day in the field.

"I don't believe it pays to raise berries without having some kind of live stock on the place to furnish manure. If there is room for a cow it is all the better because the cow and chicken manure can be mixed to good advantage. So far we have not attempted to raise much of the feed for the cow, but this winter we are going to have some oats to feed green, provided the winter is not too severe for it to grow. It takes but a small patch of mangels to supply one cow and a few rows of kale will make a great difference in the egg production of the flock.

"As for the raspberries, there are the three main varieties, the Cuthbert, Antwerp and Marlborough. While there is a difference of opinion as to the kind that is best for the general markets, it seems best to raise the three kinds and not try to supply any special demand. I am putting out a few patches of berries which will replace some of the older fields and the entire acreage will be a little over four acres.

"The eight rows of Evergreen blackberries are a good addition to the varieties, since they come at a later season and there is usually a good sale for the fruit. I am going to try the new plan of training the young canes on high wires. It is proving successful in some parts of the valley, although it involves a little more work and expense.

"I am practicing another method that some growers may not agree with," continued Mr. Hendrikson, "and that is scattering manure in the center of the rows. In many cases the fertilizer is placed around the canes with the idea that the seepage will go down and fertilize the roots. My theory is that there are as many feeder roots out a foot and a half from the bushes as there are directly under them. It also makes it easier to work the manure into the soil and I try to do this in the fall."

The poultry house is 20x45 feet and is large enough to house all the hens that can be conveniently cared for on the farm. It was built after the Shoup plan with the exception of the vents at the top, which are open to the east to avoid a draft and yet allow al foul air to pass out.

Next spring a brooder house will be built with the idea of having four runways, one of which will be used each year. The other three will be planted to cultivated crops in order to keep the soil as free from disease germs as possible.

"From 1000 baby chicks purchased last spring we raised 440 pullets, which we feel is a very good average," said Mr. Hendrikson. "We have in addition about 20 hens left over from last year's flock, but we intend to sell them off as soon as possible. The entire flock is producing a lay of between 65 and 70 per cent. We are watching them closely and we have already begun to cut down on the morning lights in order to avoid any trouble with too heavy production."

In addition to the main farm buildings Mr. Hendrikson has a berry "pickers' shed," which has accommodations for 16 persons. This, he believes, is essential in order to keep competent help throughout the picking season. A stove and bed is furnished to each person as well as plenty of wood and potatoes. The building serves two purposes, since in the winter the rooms are used for the storing of fruit and vegetables.

Scattered through the berry patch and about the buildings are a number of fruit trees of different kinds, among which are the following varieties: Yellow Transparent, Dutchess, Gravenstein, Spitzenburg and 20-ounce Pippin apples and some Winter Nellis pears. Mr. Hendrikson remarked that the tree fruits were a good addition to the main crops, since they came on at a time when the berry crops were finished and yet at a time when there was no other pressing work to be done. He mentioned the Transparents and Duchess as bringing in the greatest return.

WHEAT CROP ESTIMATES.

Aggregate production of around 1,549,000,000 bushels of wheat this year for the United States, Canada, India, Algeria, Tunis, Morocco and Japan is indicated in latest estimates summarized by the United States department of agriculture today. Wheat production in these countries in 1921 totaled 1,440,000,000 bushels. Production this year in 14 countries of Europe is estimated at 892,000,000 bushels, compared with 1,006,000,000 bushels last year. Russia, Germany, Austria, Jugo-Slavia, Czecho-Slovakia, Portugal, Denmark and Holland are not included in the summary. In Manchuria wheat and rice are below average in condition, and in Chosen wheat and rye are poorer than last year. Reports on seeding in Argentina indicate increased acreage of all small grains.

The corn crops of Hungary, Jugo-Slavia and Italy need rain. In Rumania the harmful dought has been broken, and in Bulgaria corn prospects are good. In the Matamoros district of Mexico floods have damaged the crop. The corn yield of South Africa is expected to be smaller than that of last year.

Oats and Vetch for Hay

J. R. Beck has resigned as agricultural agent in Pacific county to become county agent in Lincoln county, Ore.

In his annual report Beck mentions as outstanding features of the year's work the increased acreage of oats and vetch for hay, the increased enrollment and better work by boys' and girls' club members, the great development of community spirit through community fairs, the splendid progress in cranberry culture made through various agencies, and the replacement of scrub bulls by purebreds His recommendations for the future include vigorous continuation of work on cranberries; encouragement of the poultry industry, with particular emphasis on standardization and cooperative marketing of product; extension of acreage in oats and vetch for hay until every farm has five or 10 acres; elimination of two big evils of the dairy industry, overstocking and boarding unprofitable animals; and constant demonstration of balanced programs of production as the only method of farming successfully.

Not to mention the thousand details of his office and field work, but selecting at random a few other items from his report, it may be shown that Beck helped start many farmers on the road to better husbandry. Thirty-eight poultry owners adopted practices recommended by the office; seven farmers were assisted in figuring balanced rations for their cows and nine purebred bulls were placed. Eleven farmers treated seed potatoes and seven seed oats for disease, while 11 started growing oat-vetch hay, nine pruned fruit trees as directed and 18 adopted suggestions for growing berries. Storage work was started on samples from 22 cranberry bogs, and the use of limestone and superphosphate was demonstrated on 15 farms. Eleven farmers acted on fertilizer advice and eight planned drainage systems totaling 303 acres. Work has been started on three of these and completed on 71 acres that were previously laid out. Among the women, 18 labor-saving devices were placed in three testing circles, 22 paper dress forms were made and many articles of clothing and millinery made and fitted.

But for the assistance of 35 community project leaders who contributed 133 days of their own time, all this work would not have been possible, Beck reported.

RUSH WORK ON FAIR GROUNDS.

At a recent meeting of prominent Pacific county business men held in Raymond it was decided to rush work on the new county fair grounds and buildings, to be situated half way between South Bend and Raymond and almost exactly in the center of the county.

The following trustees were elected to sell stock and raise money for the grounds and buildings: H. W. MacePhail and Fred Eichner of Raymond, Jess Shay of Willapa, Dr. G. A. Tripp of South Bend, L. L. Bush of Bay Center, J. A. Morehead of Nahcotta and M. E. Sinclair of Ilwaco. These men will raise $15,000 over the county and immediately begin work on the new institution.

LIVESTOCK AND DAIRY

Balance the Feed

Use Alfalfa With Low-Protein, Home-Grown Roughage

By DON G. MAGRUDER,
Dairy Extension Specialist, State College.

If the roughage which you are feeding consists of such feeds as grain or grass hays, corn or grain silage or roots, so that it is low in protein, it will pay you well to buy such high protein feeds as linseed oil meal or soybean meal to balance your ration. In a feeding test which was carried on last winter on a farm where the herd was fed at least as well as the average the owner was able to increase his net profit $2 per cow per month by adding linseed meal and soybean meal to balance the ration.

If the roughage which you have on hand is not sufficient to last you through the winter, so that you will have to buy alfalfa hay in the spring, you might well buy the alfalfa now and feed it with the roughages which you are feeding, so as to raise the protein content of your roughage and allow for the purchase of less high protein concentrate for your grain ration. Digestible nutrients are fairly cheap in alfalfa compared to most other feeds on the market. In alfalfa at $20 per ton a hundredweight of digestible nutrients costs $1.92. In corn at $40 per ton a hundredweight of digestible nutrients costs $2.33. In mill run at $34 per ton a hundredweight of digestible nutrients costs $2.79.

If good alfalfa is chopped a cow can consume considerable more than if it is not chopped and so be able to secure in alfalfa a good portion of the protein which she needs. However, it is better not to buy the alfalfa ground, but to grind it yourself in order to avoid adulterants and a poor grade of alfalfa.

The average 1000-pound cow which is getting 10 pounds of alfalfa hay daily will also eat about 15 pounds of oat hay or its equivalent, such as five pounds of oat hay and 30 pounds of corn silage. If she is in good condition and is not giving more than 10 pounds of 4 per cent milk per day she does not need any concentrates. If she is giving from 15 to 25 pounds daily of 4 per cent milk, one pound of corn for each six pounds of milk would be a good grain ration at the present prices. If she is giving around 40 pounds of 4 per cent milk daily a good concentrate mixture would be six parts of corn to one part of linseed oil meal or soybean meal fed one pound of the mixture to four pounds of milk.

World's Butter Trade

The war caused radical changes in the butter trade of the world, according to an investigation made by the United States department of agriculture. Even as late as 1920 the total volume of butter entering into national trade was only about one-half as great as the annual average during the five years preceding the war. The United kingdom at present constitutes the world's principal market for butter, imports amounting to 395,000,000 pounds during 1921, which was slightly more than double the imports of 1920. In the increase in imports over 1920 New Zealand furnished 79,000,000 pounds, an increase of 158 per cent over 1920. Argentina furnished 45,000,000 pounds, or three times the amount furnished in 1920, and the imports from Australia during 1921 amounting to 104,000,000 pounds, which was four times the quantity for 1920.

During 1921, Australia, New Zealand and Argentina provided one-half of the United kingdom in imported supplies, while before the war less than one-fourth the total came from those sources.

Denmark at the present time constitutes the most important European source of butter supply for all consuming countries of Europe. Formerly the greatest part of Denmark's exports went to the British markets, but now some of her new markets in the order of their importance are: Switerland, United States, France, Sweden, Norway, Belgium and The Netherlands in Germany.

Russia, formerly second only to Denmark as an exporter of butter with an exportation averaging 148,000,000 pounds annually, is now entirely out of the trade.

Germany, which was formerly second to the United kingdom as an exporter with an annual average importation of 111,000,000 pounds, imported only 17,000,000 pounds during 1920, or less than 15 per cent of her perwar average. The production of butter in the United States during 1921 amounted to 1,725,000,000 pounds, an increase of 10.5 per cent over 1920, while there was an increase of 11 per cent in butter consumption in the United States during 1921, as compared with 1920. The difference of 21,000,000 pounds between production and consumption in 1921 was made up of imports and removals from cold storage.

While production of butter in the United States during 1921 increased by 10.5 per cent, the production of oleomargarine decreased 43 per cent, having amounted to 211,840,000 pounds in 1921, compared with 370,730,000 pounds in 1920. This calls attention to the interesting point that the per capita consumption of butter in Denmark, which in 1914 was 17.5 pounds, was reduced during 1920 to about six pounds, while the consumption of oleomargarine in Denmark during 1920 is estimated at 37.5 pounds per capita.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

SWINE DISEASES—ARTICLE II.

The conditions existing on farms where hog raising had become impossible were such as are found on many farms today and these conditions become worse as time goes on. The great difficulty is not that old hogs will not thrive, but that it is impossible to raise the pigs, many in each litter dying soon after birth from causes that lie in the environment, and the others living as runts. These conditions become so bad that without change in their living conditions no one can make hog raising profitable.

The reason for the above is found in the fact that pigs are raised in the same pens and same lots year after year without any serious attempt being made at cleaning them thoroughly or protecting the little ones from the infection that multiplies in the ground, pens and troughs. These hog quarters become a regular hotbed of infection, with all sorts of parasite eggs thrown in, and it is no wonder that the new-born piggie finds conditions very unfavorable to his development and dies a victim of careless methods of handling.

We have learned a few new things regarding certain parasite eggs in the past few years and one important thing is that simple disinfectants do not kill them. We used to recommend that the hog lots be sprayed with a disinfectant or limed occasionally to kill the dangerous germs and parasites, but when we find out that certain eggs can be kept for months in a two per cent solution of formalin without harming the egg in any way we know that our former advice was not as effective as we supposed, and we know that the reason we failed is that we depended too much on the disinfectant which did not kill.

Change the Location.

One failure, however, is not sufficient to discourage any one and if disinfectants are not to be depended on we can do something else and the next thing was to recommend that the hog lots be changed and placed on new ground and the old lot plowed up and put in crop. Now, how long the eggs of certain parasites will remain alive in the plowed ground we do not know, but as far as we are concerned we can assure them a long wait at least, because it is not necessary to use the old ground for many years in most instances and it is likely that the eggs will not survive any such length of time.

If the hog lots were to be moved every year or so the danger would never be very great, as the ground would never become so dangerously contaminated, but even then the contamination starts as soon as the hogs are placed on it and for that reason it is not advisable to place the young pigs in with the old ones until they are several weeks old, as the danger period in the hog's life is within the first few weeks or months.

Now, the men who attempted to raise hogs on the places in the middle west where the previous attempts had failed realized the cause of this failure and sought to avoid it. They took the sows that were about ready to farrow and washed them thoroughly with soap and water to remove all dirt and filth which usually contains the parasite eggs and bacteria and such vermin, then after the sow was clean they placed her in a farrowing place that had been previously disinfected by the use of boiling water, or with a small amount of lie added. This treatment will actually kill the eggs. She was kept here during the farrowing period and in a clean place for several days after. The pigs were not returned to the hog lots, however, for several months, but were

Barren Cows Can Be Made Profitable

Don't send them to the butcher. They can be made to raise calves and produce milk in paying quantity. Barrenness simply means that the cow's genital organs are too weak to function properly.
Kow-Kare, the great cow medicine, acts directly on these organs and the digestion, correcting the serious disorder. D. B. Thomas, Knightville, Utah, writes us:
"I had a valuable Jersey cow eight years old that had had seven calves. Something went wrong with her after her last calf came, so that for two years she failed to become with calf. Fed her some of your Kow-Kare last Jan. and she was all right the first serving, and long before I had given her the whole package of your Kow-Kare that I purchased."
Mrs. Harvey Ray, Homer, Ill., writes: "The registered Shorthorn cow I wrote you about last year, and which I treated for Barrenness, under your directions, dropped a fine Bull calf Jan. 2nd. Less than one can of Kow-Kare did the work."
Hundreds of others tell us every year of making valuable producers from cows that seemed hopelessly barren.
Kow-Kare is equally valuable in treating Abortion, Retained Afterbirth, Scouring, Bunches. Milk Fever and Lost Appetite. Thousands of dairymen use Kow-Kare one week each month to keep up the milk yield during the winter months.
Let us mail you, free, our valuable 32-page book. "The Home Cow Doctor." Kow-Kare is sold by feed dealers, general stores and druggists. We will send either the $1.25 or 65c size prepaid if your dealer is not supplied.

taken to the open fields and allowed the freedom of the pasture where there is little or no contaminating influences.

It was found that by the above method it was possible to raise hogs on this place as well as they had ever been raised and that there were no unthrifty ones in the bunch. The reason is that they were protected from the contaminating influences of the infected hog lot. When this lesson becomes more widely known and practiced we will find it possible to build a profitable industry on the remains of an unprofitable one, but I hope that our hog raisers will heed in time and not allow contaminating influences to undermine their herds before they take advantage of the present known methods of protection and improvement. It is easier to start better methods before necessity compels us to do so.

Hides Not All Alike

"Packer hides" are those removed in the larger packing houses where the method of taking off and curing is uniform, and are closely sorted as to grade. "Country hides" are those taken off on farms or in small slaughter houses. They vary in method of cutting, are seldom properly cured, are gashed more than packer hides, and are not sorted to uniform grades.

Packer hides are classified into steers, bulls and cows, in each of which the subclasses are "natives" and "branded," and into calf hides subdivided into "kips," "packer calves" and "slunks."

Native steers are graded as "spready" when at least six and one-half feet wide, measured while stretched flat. "Heavy" native steers weigh 60 pounds at least in the cured state, "lights" from 50 to 60 pounds, while "extreme lights" run down to 25 pounds.

Branded steers are graded as "butts" when the brand is on the rump, as "Coloradoes" when branded along the side, and as "heavy," light" and "extreme light Texas," also side branded, sometimes with several brands due to changing ownership.

Calf hides weigh under 25 pounds. "Kips" weigh from 15 to 25 pounds, and "packer calves" less than 15 pounds. "Slunks" are skins of unborn calves.

Spready steers are used for furniture and automobile leather for the most part, heavy and light natives for harness and belting leather, and extreme light natives for upper shoe leather. Branded steers are used for sole leather.

Country hides are classified as "heavies," weighing 60 pounds up; "buffs," weighing 45 to 60 pounds, "extremes," weighing 25 to 45 pounds; with "kips" and "calfskins" as in packer hides. "Deacons" are calf hides weighing less than 7 pounds. "Fallen hides" are those removed from dead animals, and "glues" are unfit to cure.

Barrett Is Here Next Week

President Charles S. Barrett of the National Farmers' union will arrive in Washington, Sunday, December 3, for two or three weeks in the interest of the organization in this and neighboring states. He will attend a series of Farmers' union meetings throughout Washington and northern Idaho. He will also be present at the annual meeting of the state organization at Spokane, beginning December 12, and will later attend the annual meeting in Oregon. While here he will make a personal investigation of the proposed Columbia basin project in behalf of the National Board of Farm Organizations, of which he is an official. President Barrett was originally scheduled to arrive November 30. The itinerary previously announced for him by President J. O. Adams of the state Farmers' union has been slightly changed to conform to his later arrival.

Trapping the Humble Skunk

The skunk is one of the easiest of the fur-bearing animals to trap. It is not, as a rule, in the least afraid of human signs and is generally inclined to be rather tame and friendly. The skunk seldom makes dens of its own, preferring to use deserted dens of various animals.

Locate den and place trap directly in entrance. When dens are not found, a hole may be dug under an old stump and place the bait, which should consist of tainted meat of any kind, under the stump and set the trap at the entrance. Cover the trap lightly with dry dirt.

Another good method of making a set for skunk is to build up a small shelter of sticks, open on one side only, place the bait in this shelter and set the trap directly in front of the opening.

MARKETING CONTRACT UPHELD.

The Benton county supreme court has handed down a permanent injunction against a member of the Kennewick-Richland Fruit Growers for marketing his fruit crop elsewhere. The court held that the contract was fair and equitable and that, while the marketing agencies could not compel the member to deliver his fruit to it, he is restrained from marketing it elsewhere. This decision is passed upon the decision of the Washington state supreme court and the Washington Cranberry association.

POULTRY AND RABBITS

Lady Jewel

Holds World's Record for Eggs

Lady Jewel, a single comb White Leghorn owned by H. M. Leathers of Woodland, Cowlitz county, Wash., now holds the world's record for egg production, having recently finished her 365-day record with 335 eggs to her credit. For several weeks before the western Washington egg-laying contest at the western Washington experiment station at Puyallup was completed on October 31 this hen, No. 35, stood above all the others. She beat last year's record of 313 eggs by 22 eggs and was still laying at the close of the contest.

The dam of Lady Jewel traces back to stock which Mr. Leathers secured from Oregon Agricultural college and her sire was a Tancred "Imperial" bird. Her record shows what can be done by careful breeding and proper feeding methods. The 335-egg record was made under conditions that were by no means ideal for the best results, and it was not until April that she began work in earnest. The green feed had been frozen down, but when the lawn clippings and other greens became available in March her production began to climb. From April 2 to August 11 she layed 132 eggs consecutively, all of which were standard eggs and of a uniform size.

Lady Jewel.

The year's lay from this record hen was estimated at a $8.056 valuation, while the 23 eggs from the lowest hen in the contest was valued at 55 1-2 cents.

The new figure is the highest record of the world for an official contest, there being only two hens with records that were better. One was a Buff Orpington in New Jersey, with a semi-official record of 343 eggs, while the other was an Australian bird, a Black Orpington, also semi-official record of 339 eggs. Neither of these records are recognized by the record of performance council. Other records have been reported that have exceeded this amount There are few poultrymen, however, that pay any attention to records not made in any egg-laying contest.

The high pen was also a pen of single comb White Leghorns, but these were owned by Frank E. Gilbert of Vashon. The five birds layed a total of 1421 eggs in the year, which is 36 more than was produced by the high pen last year. D. Tancred of Kent held the pen record with 1384 eggs and also had the winning pen the year previous. The Gilbert birds, however, are of the Tancred strain and had been bred for production.

The contest ended October 31 and the birds were all crated and returned to their owners. Their places are being filled with younger birds that were on the grounds ready to begin a similar contest for the year 1923. Superintendent W. A. Linklater expects to see some records that are at least equal if not better than the ones made this year.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Geese Wear and Tear

"They don't cost over 50 cents apiece for feed, but they'll stand you not 1 cent less than $5 apiece if you count your running and the wear and tear on your system. You can't raise them without pasture, and if you didn't have a good-natured husband they would be a sure cause for divorce!"

Mrs. P. M. Ambrose of Chinook, who thus summarized for a group of poultry "tourists" last summer in Pacific county the business of raising geese for market, doesn't particularly mind the "wear and tear"; she has both pasture and a good-natured husband, and she sells the birds at 8 to 13 pounds for $3 to $5.50 each, hence her efforts at supplying the Thanksgiving and Christmas markets with this rare delicacy may be termed eminently successful. She hatches under light Brahma hens six to eight eggs per sitting from 10 adult females and four ganders of both the Toulouse and African varieties, and while she hasn't any very accurate figures on what it costs to raise them, she estimates that a pound of grain per gosling per week will bring them to the stage where they can make practically all of their living from Friend Husband's broad pastures. She begins hatching early in April and feeds the young birds straight corn meal for a day or two, then mixes it with "shorts," using water, not milk, for a moistener. In the drenching rains of that section it is necessary to gather in the young birds to prevent drowning up to about 4 weeks of age, and it is in these almost daily "roundups" that Mrs. Ambrose experiences most of the wear and tear. Strangely enough, also, one-third of the total number she hatched last season were killed by crows, which would descend into the pasture and kill goslings as large as a mature Indian runner duck.

Mrs. Ambrose's flock is shown on the cover page this week as they halted for THE FARMER camera.

Buy From Good Strain

The poultryman who is receiving less than 120 eggs each from his hens as a general average is making no profit from his birds, according to W. D. Buchanan, extension poultry specialist of the state college. Any hen that lays below this amount is a boarder and should be disposed of. It takes approximately 120 eggs to pay all expenses for each individual hen for an entire year. This figure, of course, is based on the average price of feed and the average return for eggs.

After one has paid for feed, taxes, insurance and interest on investment, there is nothing left for labor, but an average of 130 eggs will return a small profit to the owner. It stands to reason, therefore, that if the general average can be raised to 200 to 300 the returns will be much greater.

If one were to buy 1000 day-old chicks at 14 cents each, with no particular strain behind them, and a second thousand costing 25 cents each, or $250 per thousand, with egg-laying strain back of them, they will return a profit of $290 a year more than the first. Each of the 1000 chicks may produce 400 pullets, but even after deducting the extra first cost, the better strain flock will make the increased profit. These figures are based on an average of 140 eggs each for the cheap chicks and 180 eggs each for the more expensive kind.

As for the cockerel, no one can tell by looking at him how many eggs his mother laid. If his mother was a low producer he will likely ruin the average of the flock. While if she was a high producer and he is a good individual he will be likely to increase the average. The surest way is to buy a cockerel from a strain of known record.

Seattle Poultry Show

Seattle is preparing for a northwest poultry show to be held January 3 to 7. It is expected that the following states will have fowl on exhibition: Washington, Oregon, California, British Columbia, Idaho, Montana, Wyoming, North and South Dakota.

Harry H. Collier, director of the American Poultry association for these states, has called a convention of the members of the association to organize a zone for these states. The object of the zone is to encourage the growing of poultry and to get such legislation, both in the state and nation, that will create more experiment stations and pass laws that will help the industry.

Five-Acre Poultry Farm

E. B. Morrill is getting a five-acre poultry farm started in the Southern Heights district of Vashon island. At present Mrs. Morrill is doing most of the work, as she herself put it. She is taking care of 130 White Leghorns, which are a foundation for a commercial poultry flock.

"We intend to raise the best of stock for breeders and will either sell hatching eggs or we may hatch our own chicks," said Mrs. Morrill. "It will be possible to run the farm on a commercial basis next season, as Mr. Morrill will spend all of his time at home instead of working in town, as he has been doing this year. We felt that such a plan was necessary in order to get our farm started the right way."

Mrs. Morrill told how they were getting a few good fruit trees started in order to have something else to sell besides eggs and chicks. There are about 30 trees of Winter Banana apples, since the trees do well, and there is a demand for the fruit. In marketing the Winter Bananas Mrs. Morrill has found the fruit stands to be a good market. A few Grimes Golden and Spitzenburgs are also among the new plantings.

Cause and Effect

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

ORCHARD AND GARDEN

That Apple Worm

Has He the Grower on the Run?

By PROFESSOR O. M. MORRIS.

The codling moth broke its former record for the destruction of the apple crop of the northwest in the summer of 1922. It had been preparing for this job for several years and the orchardist gave some help all along the way. He has been increasing the cover crop and the amount of trash and litter material left on the ground each winter.

This seems to be necessary for general improvement of the soil of the orchard, but it has also been good for the apple worms to harbour in during the winter. The trees are growing older and contain a good deal more rough scaley bark each year, thus furnishing additional hiding places for the worm. The winter, while cold, was even and was not destructive to the worms wintering over. The snow laid uniformly over the ground and in every way it was a comfortable winter for the worms.

Birds Are Thinned Out.

The grower has also done his bit to destroy many of the birds that have lived through the winter here, and many have taken special delight in destroying woodpeckers, which have done a good job in keeping the worms from living through under the bark and crevices of apple trees. Altogether, things developed so that when breeding time came the codling moth emerged in great numbers.

The entomolgists tell us that in many years the moths have layed on an average of six eggs or few above this, while last spring they have records of many moths producing as many as 20 eggs. On the whole the abundance of moths and tripling their producing capacity give us a wonderful crop of eggs to begin with.

Caught Unprepared.

The summer temperature arriving so suddenly found quite a good many orchardists rather poorly prepared to meet the sudden onslaught of worms and some spraying was done a little late. Some of it was done poorly because of the increased amount of foliage, increased size of trees and the rate of temperature development placed their spraying work a little behind time. There was not a general complaint about excessive number of worms early in the season.

The summer being warm gave the worms an opportunity to live and grow and to range wide over the foliage of the trees so that it is probable that some lived on foliage some days before entering the fruit. This could be done during the warm weather of the summer. It does not commonly take place in districts that are subject to very cool summer weather. The worm that is several days old before he receives his first dose of poison is not as easily killed as the worm that receives his dose immediately after hatching, and, with the rapid growth of foliage this year, it was possible for lots of these worms to feed on unsprayed foliage.

The set of fruit in orchards was extremely heavy. Thinning was more generally practiced than usual, but a very large proportion of it was done late in the summer, so that, even though wormy apples were pulled off, they were thrown to the ground and the full-grown moths emerged later and it is perfectly possible for careful thinners who are attempting to save all the wormy fruits to miss a good many apples and throw them on the ground, where the worm would live through its normal state. Later in the season, after the promise of a wormy crop became noticeable, spraying was more generally and more vigorously carried on, but for most of the orchardists the work then was too late.

The spraying work done by the orchardists this year was probably as good as, and, in most cases, better than the average in years passed. But it is also true that the orchards of many districts looked better and showed a more heavy foliage than for several years passed and altogether it is doubtful if the trees were quite as well covered as in previous years.

The value of the spray materials used have been questioned repeatedly. There is no reason, however, to believe that the fault lay in the spray materials; generally. No cases have been reported of standard brands of spray material being below the grade of past years when they proved very successful materials.

Good Prospect for 1923 Worm.

Up to date the prospects for next year are splendid from the worms' point of view, and in all probability they have a fair chance of reappearing next year. The winter weather has as yet an opportunity to be distinctly against them, but our orchard conditions generally are in their favor.

The trees are a year older, carry a little more rough bark, and are a little larger and more difficult to spray thoroughly. The cover crop and litter cover on the ground is generally a little heavier. The growers are more determined than ever that the soil must not be vigorously disturbed except at certain periods of the year and the prospect as a whole looks bright for Mr. Worm.

Thorough scraping and cleaning of the trunks and large limbs will be helpful. Careful banding and thorough up-to-date spraying is about all that can be done. The fruit grower must recognize that as his orchard grows older conditions will generally favor the increase and activity of the orchard pests, and it will be more difficult to maintain the former high standards of perfection and quantity of fruit produced.

Orchard Mice

Central Washington to Wage War

By LEO K. COUCH,
United States Biological Survey.

The general practice of alfalfa cover crops in the irrigated orchard districts of central Washington has brought on a menace in the form of field mice. These creatures use the cover crop for shelter and food during the growing season. During the winter months, while the cover crops are dormant, the mice are forced to attack the trees for their existence. This girdling of the bark is in the form of a collar around the base of the tree and underground along the main tap roots. Bitter bark trees, such as peaches and prunes, are not likely to be injured, but apples and pear trees are readily attacked. Trees injured in this way can be saved by bridge-grafting if the girdling is not too far underground. A tree so bridge-grafted can not produce a crop for two years.

A summary has been made of a questionnaire sent out to growers in Chelan and Yakima counties. This questionnaire was sent to determine the damage done last winter and to find what the indications were for the approaching winter.

In Chelan county, where 625 ounces of strychnine were distributed for mice, 184 growers reported only 900 trees were damaged. This damage was reported done on 2053 acres of orchard, with 1286 acres in cover crops.

In Yakima county, where only 131 ounces of strychnine were distributed last winter, 292 growers reported 4598 trees damaged by mice. This damage was on 6884 acres, of which 5053 acres were in cover crop.

From observation of the two counties, the mice were more numerous in Chelan county, but extensive poisoning operations reduced the damage in this county.

The questionnaire, besides finding out the number of trees damaged last winter also determined the threatening attitude of mice this fall. In Yakima county, out of 292 replies, 147 reported mice very active this fall. In Chelan county, out of 184 replies, 64 reported mice activity.

With this information at hand, an extensive campaign has been planned in central Washington by the biological survey in cooperation with the extension service through the county agricultural agents. William Meikle, county agent, will have charge of Chelan county; A. E. Lovett, county agent, in charge of Yakima county. The plans provide for furnishing strychnine and poisoned grain at cost to growers. Demonstrations on proper poisoning methods will be given where needed.

Bridge Grafting Pays

Bridge grafting has saved the Yakima orchardists over $50,000 this year, according to the estimate of County Agent A. E. Lovett. There were 792 growers attending one demonstration of bridge grafting. The reports which have reached the county agent's office, cover 1483 acres, of which 3333 trees had been girdled or partly so. Out of that number the growers reported that 2783 had been bridge grafted and 2705 saved. Thirty-three men placed a value on the trees saved at $10.65 a tree and this estimate was figured in the total.

SHEEP IN THE ORCHARD.

Report comes from Yakima valley that sheep are in demand by the fruit growers for cleaning up the cover crop and vegetation in the orchards. Not only will the cleaning up lessen the fire hazard, but the tramping done by the sheep also destroys the mice nests.

FIGHT NARCOTIC EVIL.

Forty-two fraternal, civic and social welfare organizations have united in a common war against the narcotic evil in Seattle.

Miscellaneous—First, Banman, on Carmen (974); second, Haynes, on Blue Victor (948); third, Portland Seed Co., on Early Rose (902).

President Cannon's address emphasized the necessity of absolute knowledge of the quality of the seed used. Really good certified seed should command a premium justified by the fact that the yield does not compare with that of the commercial field, he said. Ruthless roguing of the seed patch, with all the loss of tonnage it involves, must be a primary consideration, and quantity of output forever a secondary one. He rather looked toward and hoped for some future board or committee, composed both of commercial and seed potato growers, whose work would justly establish the price relationships of the two industries, correlate them and make for the stability of both.

The "Purebred Sire."

In seed potato growing, as in raising live stock, we must have high-class breeding stock, highly protected, for high-class returns. There are men who never will be successful seed growers, said Mr. Cannon; men who will not buy the "registered sire" potato; who will not be careful to plant late enough to evade the burning season in our climate, and who will hesitate to rogue as ruthlessly, at the expense of size of crop, as production of clean seed demands.

"Of course I know," continued the speaker, "that some years are going to be bad. We have the potato flea beetle and one thing and another, coming up, and we have these Links, Harrisons and others coming around and insisting that this and that is the matter with our potatoes" (the reference was to Dr. G. K. K. Link of Washington, D. C., whose address followed), "but in the end the man who deserves to be in the seed potato game will still be in the game."

Upon Dr. Link's playful response to his sally, Mr. Cannon added that he thought the visit of Dr. Link to this territory and to the potato conference were of considerably more benefit to growers than visits from the potato beetle and the leaf roll.

Discusses Sinister Diseases.

Dr. Link is of the United States bureau of plant industry and was with the potato growers at their conference last year. He alluded to the progress in study of virus potato diseases in the course of the sinlge last year. What were formerly interpreted as various stages in the progress of potato mosaic, he said, are now regarded as possibly manifestations of several different forms of this yield-reducing potato disease. The absolute inadequacy of seed at the bin was convincingly illustrated in Dr. Link's screen talk by slides that showed fine, typy tubers from plants affected with this disease. The baneful effects of mosaic, he said, were not in impairment of the quality of the tubers as potatoes, but in the yield, and in the quality of the tubers as seed. Yield is ingevitably reduced by a disease that cuts down the leaf surface and its power to absorb sunlight, for the leaf is the sugar factory, whose output changes to starch and is stored in the tuber. Consequently the more mosaic, the poorer set. Reduced leaf surface is reduced factory floor space.

Curly dwarf, another virus disease, similarly reduces the yield through leaf condition as well as by causing the plant to die earlier. Leaf roll is even more pernicious in its cutting down of the yield. Symptoms of this disease are the thickening and rolling of the lower leaves, first, their appearance thereafter justifying the name of ,'rabbit ear," sometimes applied to the disease. Leaf roll can be and has been mistaken for injury from drought, said Dr. Link. The trouble is communicable across six and even seven rows of planted potatoes. Virus diseases work quickly and, therefore, one or two inspections of the growing crop are not enough.

No regions are immune from these potato diseases, but seed is more easily kept pure at home by early and watchful roguing than imported free of the diseases, he said. Virus diseases do not, probably, contaminate the succeeding crop through the soil, but through the tuber, whether volunteer or from the bin. So take the tuber with the plant, when roguing, said Dr. Link, and take it early.

Educating the Potato Man.

Professor George Severance of the State College of Washington, speaking on the educational needsofthe potato grower, took issue with the proposition that potato-growing requires a highly specialized academic training. Real education, he said, is a training in the power to think and an establishing of the habit of thought. Habit of thinking is vastly more important to the man than the specific thought content of his school years, he said.

"When I went to college there were few texts in print on the modern principles of agriculture," he said, "and we had to take this material in the form of classroom lectures. Today if I should ask you how many had read, even, all the government bulletins that are available to you on potato culture, let alone those on soils, bacteriology and kindred topics, there would be but a small showing of hands."

General discussion brought out that the absence of the word "potatoes" from the seed law handicaps at present the purchaser of potato seed.

A Pasco grower, developing the idea of "pedigreed stock" in the potato industry, earlier brought out, suggested that certification might be made to require a certain minimum production, thus tending to eliminate the inefficient seed grower.

Planting the Blossom End.

One of the interesting points of the potato conference was the disclosure that, in experiments and farm practices under observation by Professor George Hyslop of Oregon Agricultural college, extremely favorable differences in yield had been obtained in the planting of blossom-end pieces of the potato tuber, in instances where these had been planted separately, from stem end and other arts of the tuber. Less of wilt, greater freedom from disease and better shape had resulted from them.

Professor C. C. Vincent of the University of Idaho, speaking on treatment of seed for rhizoctonia, etc., stressed the value of starting with good, clean seed, treating it and protecting it, instead of bringing in new seed stuff yearly. In this he reflected a sentiment repeatedly expressed throughout the conference—that self-renewed seed, kept clean and vigorous, entails less of risk than seed frequently recruited from new sources. Professor Vincent also dealt with the effect on rhizoctonia of early and late planting, presenting results decidedly in favor of late planting in keeping down this disease. Control measures are as yet in a stage where results are inconclusive. In treating tubers in the sack for rhizoctonia one loses rapidly the strength of the corrosive sublimate (bichloride of mercury). The seed would be better removed and washed before treatment.

What has been learned at the State College of Washington during the year concerning varieties and strains within a variety was discussed by Professor O. M. Morris. Extremely wide results in yield had been obtained from the same variety, planted under like conditions, but obtained from various sources. Striking among the results was his conclusion that a seed stock may go rapidly up or down, from year to year, in its producing possibilities; that the district in which produced has less of influence upon the results obtained from the seed than have the practices of the grower and the proximity to other stocks. The check-up also seemed to show no close relationship of yield with percentage of crop that is off type.

Taking, as illustrative, the yields of 16 plots of Netted Gems, representing as many strains planted under uniform conditions and within a two-day period, he presented yields varying from 13,900 pounds per acre in one case to 3700 pounds in another. Two of Professor Morris' conclusions were that storage vitally affects the powers of performance of the seed, and that in choosing potato seed he would want to know the yield of the crop from which it was obtained.

Results from Montana were brought before the conference by Professor F. M. Harrington of the Montana State college. His verdict was in favor of cutting the tuber into seed pieces averaging an ounce and a half. From larger pieces, he said, more tonnage but less marketable stuff had been obtained. His experience tended to show that the highest-yielding seed gave the highest percentages of No. 1 grade. He, too, had had results with small whole potatoes that out-yielded large cut seed. Professor Harrington cautioned also against too frequent irrigation, citing more advantageous results from infrequent irrigation and "much scratching" of the field.

Must Be Ever Vigilant.

The unusual number of misshapen tubers produced this year was matter of comment by E. R. Bennett of the extension division of the University of Idaho. He pointed out that deep planting, where it obtained this year, had been able to offset a seasonal excess temperature. Growers in the uplands should plant late, even at cost of some reduction in stand, he said. Well sized but whole potatoes produced the greatest number of strong, independent stems, on which depend results. Rigorous roguing of the potato fields is gradually producing cumulative results that must not lapse for a single year, he declared.

It is the harder to build a strong and discriminating market for the potato because of the grocer's acceptance of poor stuff brought him to apply on trade or to avoid necessity of inspection. This results in disgust with and diminished consumption of the potato. The department's recommendations for the growing of seed potatoes this year would include, he said, the following:

Use of only good seed, disease-free and of a high-yielding strain.

Use of whole tubers when expedient, or of two to four ounce pieces.

With the increase in size of seed piece, planting further apart.

Sets of uniform weight, in order that plants may not be dwarfed and overshadowed here and there.

Late planting, for more desirable types, "late" signifying here around the first of July.

Fullest possible knowledge and most relentless roguing on the part of the seed grower.

J. E. Curry, state seed inspector of Washington, presented conclusions from study of various seed-treating solutions. He described the new hot formaldehyde treatment as quite as effective for rhizoctonia as the corrosive sublimate treatment. It is quickly handled, for small seed lots by the plugged barrel methods, for large lots by the vat. Four bushels of seed may be given its two-minute treatment with two pints of formalin added to 30 gallons of water from 118 to 123 degrees in temperature. Treat the tubers before they are cut. Early spring treating of the seed should be followed by its storage in disinfected sacks and bins.

Do Not Grow Culls.

Professor G. R. Hyslop of Oregon Agricultural college discussed also the disposal of the cull and the surplus stock. Some of the surplus may be planted, he said. As for the cull—first, don't grow culls. Culls are made by planting seed pieces too small, by failing to treat the seed, by leaving the diseased plant in the field, by cultivating too late and too closely, watering too heavily, storing improperly—with poor ventilation, excessive moisture or poor frost protection or by cutting in the sun or leaving in the sun the seed pieces.

Second, said Professor Hyslop, don't plant culls; third, don't sell them, to destroy your market for the good stuff you have on hand. One who buys ungraded potatoes for the market buys only at a price that enables him to grade more cheaply than by graded stuff; in other words, at a price at which you get nothing for the culls among them. The cull placed in the hands of a peddler, then goes forth to compete with good potatoes and decrease the consumption of the potato. Why clutter car space and storage and pay freight on the cull? The place for it is where it is produced.

Feed culls, if you have stock, at the rate of 450 pounds cooked or 600 pounds raw to 150 pounds of grain. Add as little water as possible in cooking them and boil until the skin bursts. For the hog, one pound of grain to as many as four of cooked potatoes is a good ration.

COOPERATIVE ASSOCIATION WINS.

The Seattle Milk Shippers' association recently granted an injunction against William Wyatt of Auburn, one of the members who attempted to withhold delivery of his milk in violation to his contract. While the case is similar to others that have come up during the last 18 months, it is the first injunction under the provision of the state marketing act. The shippers regard the decision as another victory for the properly organized cooperative association.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general offices, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

POULTRY 174

$2000 FOR FIVE HENS—A RECORD PRICE for record hens. We announce the purchase of F. E. Gilbert's winning pen of White Leghorns at the recent Puyallup egg laying contest. These five birds laid 1421 eggs in 12 months, thus establishing a new world's record. These birds are to be mated with the best cockerel to be obtained and used in building up Queen Quality strain of chicks. We have also contracted with Mr. Gilbert for the eggs from the pen sisters of these wonderful birds. We will have a limited number of chicks and eggs from them for sale this season. The greater part of them will be used for our own use. In addition to the Gilbert birds, we will have many flocks direct from Hollywood and Tancred stock. We also hatch R. I. Red and Barred Rock chicks of exceptional quality. We are now booking orders for early delivery and have sufficient capacity to assure prompt delivery at time promised. Incubators, 15 per cent off. We offer a special discount of 15 per cent on Queen incubators purchased from us during November and December. In addition to the Queen, we carry the Master's incubator, Petaluma electric incubator, Blue Flame brooders, American brooder stove and are agents for the Kresky brooder stove. Write for our new catalog. Queen Hatcher, 87 Sewart st. Seattle, Wash. Ell. 2054.

"HENACRES" BABY CHICKS FOR 1923. IT is time to plan your poultry work for next spring and we suggest that you write for our free illustrated catalog now. The booklet contains lots of information on poultry management, gives our feeding formulas, etc., besides describing our stock. "Henacres" Leghorns have made good all over the northwest, so you take no chances in buying them. Some one in your neighborhood knows us, ask him. We have already sold 40,000 chicks for 1923. "Henacres," Box A, Prosser, Wash.

BABY CHICKS—FRESLAID FARM HUSKies for 1923. Banish hard times with a bunch of our profit-making Leghorn chicks. Time flies. CHAPTER TWENTY-THREE.

The Rainbow's End and a Pot of Gold.

Late in the day, after resting, three of the party took up their guns and started in quest of game. Half a mile away Cooper succeeded in bringing down a fat elk. Holloway came back for an ax, and in due time the two men returned to camp, carrying an elk on a pole, its legs tied together. The whole party, Frisk among them, feasted on elk meat that night.

The night here was almost cold, but the wandering gold seekers slept comfortably enough by their great campfire. When morning came they felt rested and more hopeful. But the muscles of their legs, and especially the calves of their legs, were very sore. So sore that, had the party followed their inclinations they would have remained in camp for at least another day. However, they had crossed the great snowy range to prospect for gold, and it was important that they do what they could before a shortage of breadstuff drove them back.

But they lingered in camp till rather late. And after getting under way they stopped now and then to rest. While resting they admired the wonderful scenery spread out before them and below them to the west.

The country was still very rough, and the forest, when they entered it, was hard to travel through. Night came on, and the wanderers were still among the mountains. There was plenty of game, and again they had all the fresh meat they wanted. The fact that they were, so far as they knew, the only people in this part of the Rocky mountain wilderness, filled them with something akin to awe when they thought of it.

Next morning they traveled on again. Though descending all the time since crossing the snow cap, they were stil among mountains. To avoid mountain climbing as much as possible they were soon following down a not very large stream. Now they stopped from time to time and washed out a few panfuls of sand. Finding nothing to encourage them, they kept on.

About noon they came to where the stream they were following entered a somewhat larger stream. A mile or two down this they stopped, in some high grass on the creek bank, to eat their dinner. Having plenty of bread and meat cooked, they did not kindle a fire. After eating they stretched themselves out on the grass to rest.

When they had been lying there for perhaps half an hour Jess Holloway sat up. He was near the edge of the bank, and now sat gazing down into the creek. At length he got upon his feet.

"Boys, while all of you are resting, believe I'll step down and try my luck in that creekbed. Might happen to be something down there."

Most of the party were asleep. But Orlando awoke and sat up.

"Guess I'll go with you, Jess."

In a little while the two, each with a pick and pan, were down in the bed of the creek. The stream was rather wide here, and a considerable patch of sand and soil was not covered by water. After digging up enough of that to fill his pan, Jess carried it to the edge of the stream and began to wash.

Presently Orlando, who was still digging, heard the other miner utter a surprised exclamation.

"What's the matter there, Jess?" he called out.

"Matter enough, I'd say! Just step over here and take a peep into this pan!"

Carrying his own panful of dirt, Orlando hurried over to the water's edge. And scarcely had he glanced into Holloway's pan when he exclaimed: "Well, for the land's sake! Who'd have thought it? Struck it rich the first pop, didn't you?"

"What's the matter down there, boys?" Cooper's voice was now heard calling from the bank above.

"Gold's the matter! Just come down and see!" shouted Orlando.

Aroused as much by the excited tones as by the young fellow's words, Cooper, already sitting up, sprang to his feet and started toward the creek bank.

"What! Has somebody struck pay dirt already?" demanded Esau.

"Seems that he has! That's what they say, if I understand 'em," Cooper called back, as he disappeared down the bank.

Now Esau leaped to his feet, and Sanders and Givens, who had been aroused from naps, were close behind him when he started down a sloping place. They found Cooper at the water's edge, gazing into Holloway's pan.

"At least two dollars' worth in there," Cooper was saying.

"Two and a half was my guess," Holloway answered.

After one good look at the contents of Holloway's pan, Orlando had turned and gone to washing the dirt out of his own pan. All waited impatiently for him to get through. And when he had finished they crowded around to note the result.

He had washed out even more gold than was in Jess' pan. Cooper estimated the amount at not less than three dollars.

"Did you dig up that dirt at the same place, Lando?" inquired Sanders.

"No, I didn't. It was several feet from where Jess filled his pan. He got started before I did. And then I hunted around a little, for just the right spot, before I began to dig."

"This whole patch of sand and dirt here seems to be rich, then."

By this time all had forgotten that they had been weary. Everybody was full of suppressed excitement. But their excitement made them quiet rather than noisy.

At once those who had not brought their pans and picks hurried up to the top of the bank, where their packs were, and came back carrying them. And with them and their shovels they were all soon at work, loosening up dirt with their picks, shoveling it into their pans and washing it out.

Not many were the panfuls washed out that did not pay well. Somebody brought down a not very large tin cup, and into that they emptied their gold every time a pan had all the dirt washed out of it.

Eagerly, silently, but with much secret excitement and enthusiasm they worked. Filling their pans, they carried them to the water and there washed till nothing was left but the heavy gold. In time the tin cup was full and some larger vessel had to be found.

Now Orlando climbed the bank to their camp. In order to travel light, they had brought as few vessels of any kind as they could get along with. But in one side of Brindle's pack was a little camp pot. Among their supplies were some beans and peas and corn for hominy, and they had brought the pot mainly to cook those in. It had a wire bail and a close-fitting lid, and was easy to carry. Selecting that as the vessel they could spare best, the young man hurried back with it.

Setting the pot down at a convenient place, he emptied the tin cup of gold into it. Then he caught up his pan and shovel and fell to work again.

Almost in silence the whole party worked, only a word or two being spoken now and then. Sometimes, when a miner had washed out an unsually rich panful of dirt, say fifteen or twenty dollars, he would hold it out for the others to inspect. They would pause for a moment, look into the pan, nod their heads in a gratified way, and turn again to their washing.

Scarcely for a moment did any of them pause in their thrilling work till darkness had made it impossible for them to do any more. Even then they spoke of kindling a fire at the water's edge and trying to continue their mining by firelight. But their decision was that it would be wiser to get a good night's sleep, so as to be ready for the following day.

Now, after pulling the grass till they had cleared off a spot on the bank above, they kindled a little fire there. Grouped around that, they broiled some elk meat on sticks, baked some flapjacks in their frying pan, and made a supper of those. The weather was pleasant down here, and they needed no fire for warmth. Soon all were lying on their blankets, sleeping the sleep of weariness.

But they were up before daylight, had cooked and eaten their breakfast and were ready to go to work, even before they could see. When started, they kept at work silently for hour after hour.

By noon, without taking time to weigh the contents of their pot, they estimated that they had between $1800 and $2000. So excited were they all that they could not think of stopping to cook. They ate cold flapjacks and meat, drank a little milk from their big-mouthed bottle and fell to work again. And they kept at work till night put an end to their labors.

Again they cooked supper around a little campfire. While the others were doing that, Orlando milked Brindle, watered her at the stream and moved her to fresh grass. The grass being abundant here, he kept her all the time at the end of his lariat.

Daylight next morning found the party as excited as ever and every one washing out gold as fast as he could. This morning they found their largest nugget. It weighed more than an ounce and was worth $20 at least

But, just before the toilers paused for dinner the gold-bearing sand began to fail. There had been only a little pocket where gold could lodge, and they had washed all of that out.

But all the rest of the day the six men worked hard, and without stopping for a moment. They washed above and below, as well as at any other place that looked promising. But no more gold could they find. Yet not discouragement but darkness put an end to their useless toil.

Again their revived their little fire and cooked and ate their supper over it. By this time they were almost out of meat. There would be barely enough for breakfast.

Day dawned again, and again found the six partners busy with picks and shovels and pans. And they kept at work till a good while past dinner time. But it was labor to no purpose. They had cleaned up all the gold that could be found in this vicinity.

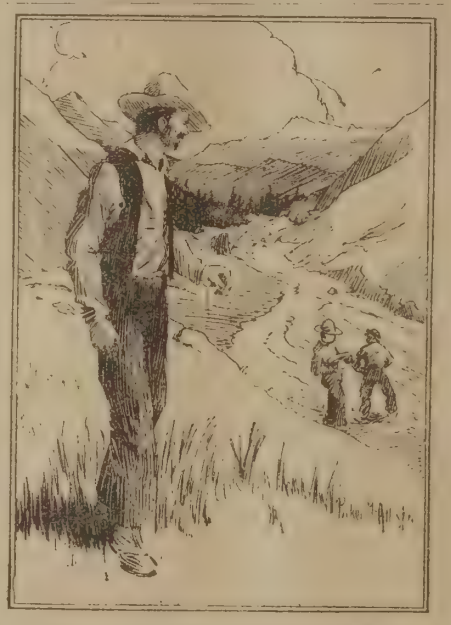
Finally they suspended their digging and came together, up on the bank, for consultation.

The six had formed themselves in a circle, with the pot containing all their undivided gold as a center.

"Men," exclaimed Orlando, "the old saying was true after all! We've proved it."

"What old sayin'?" demanded Esau.

"Yes, what is it we've proved, Lando?" asked Holloway.



"Why, the old saying we used to hear so often when we were little shavers; that if you went to the end of the rainbow you'd find a pot of gold. We came to the rainbow's end, and there's the pot of gold to show for it."

Cooper laughed, in a rather pleased way. "Well, now I'd clean forgot our rainbow-chasing business. So had we all, I suppose. We talked a lot about it at first, but that grizzly bear and other things must have crowded it out of our heads. And, of course, after the gold excitement struck us here we couldn't think anything but gold. If we actually came to the end of the rainbow, that's quite a—a coincidence. Some fellows would be gumps enough to be superistitious about it."

"We came to the end of the rainbow without a doubt," Jess Hollowoy assured them. "That end of that rainbow dropped down behind the snowy range, I recollect, just back of where a little point of snow ran down below the main snow field. And there's where we crossed."

"And we've been traveling just about the same direction ever since we climbed over the snowy range. I know that by my compass," Sanders told them.

"No use arguing the matter further. We've proved the old saying. And if anybody doubts it we can show 'im our pot of gold," said Orlando.

"What's the matter down there? boys."

"Take it any way you want to, that was a lucky rainbow for us," Givens admitted. "We'd started for the other mountains, I recollect, but the sight of that bow in the clouds put in your heads to go rainbow-chasing. I was opposed to the whole rainbow business. But I'm wonderfully glad now that I wasn't pig-headed about it."

"We're all glad we came, the way things have turned out," Cooper said. "Let's see how glad we are."

Reaching out, he took hold of the pot's bail. After raising and lowering the pot a few times, he went on: "My guest would be 30 pounds. More apt to be more. All of you lift it and make a guess."

Each took his turn. And while some guessed more than Cooper, nobody thought the pot would weigh less.

"Well, it seems pretty safe to say we've got 30 pounds here, pot and gold together," Cooper continued. "Jeff, it's your pot. How much will it weigh, would you say?"

"It's a camp pot, and I bought it because it was thin and light. About three pounds, I'd guess, without the lid. Not more than four at the outside. Three's nearer right, I think.

"If the pot weighs only three pounds, that leaves us 27 pounds of gold in there. At $200 to the pound, we must have about —about $5400."

"Fifty-four hundred dollars! Why, that's $900 apiece!" exclaimed Orlando.

He was thinking that he had considerably more than $100 worth of dust in a buckskin bag—his share of their earnings in the Clear Creek camp. That, added to his one-sixth of what they had taken out here, would leave him more than $1000. Poor all his life—his mother had been a widow well nigh as long as he could remember—such an amount seemed a fortune to him.

"That's not bad for two or three days' digging—not halfway bad," declared Givens.

"Bad! I'd say it isn't bad! It's bully good work, I think," exclaimed Orlando. Then he added, with a grin: "Now I know how old Croesus felt!"

"This is certainly a pretty handsome haul," Sanders remarked. "It would take us clodhoppers many a day to dig 27 pounds of gold out of our farms."

"Wouldn't it, though?" exclaimed Esau, who had worked much as a farm hand. "Now if we can just strike another rich pocket of dirt like that'n!"

At once Cooper spoke: "I'm afraid we're at the end of our row here."

"I know we are," declared Holloway. "A man can't earn his salt digging down there now."

"Looks that way," admitted Sanders. "But we've done well here, and I'm for keeping on. Whether we should work up this creek or down is the question."

"Let's work down a right smart piece; and, then, if we don't strike any more pay dirt we can come back here and work up," suggested Esau.

"That's a good idee," agreed Sanders. "Ought to be more gold where that came from. The main supply must be somewhere upstream."

"And not all the gold that has washed down this creek has lodged here. May be more of it lodged somewhere below," was Jess Holloway's opinion.

And Cooper said: "That's to be seen. But we'll certainly test the matter before we abandon this creek. Lucky thing we're here by ourselves. If somebody don't follow us, we can prospect the whole region round about in peace."

"Wouldn't it stir up a wild hubbub if it was known on the other side of the snowy range how much gold we've washed out here?"

"It would. It shorely would, Jess," answered Esau. "Why, we'd have 10,000 miners here in a little of no time."

Now Cooper added: "Undoubtedly that was a wise idy we hit upon—that of strikoff by ourselves. And we want to work like good fellows, too. No telling when some other bunch of rainbow-chasers will come tagging along behind us."

"Not a doubt but what there'll be others over here to prospect before so very long. So we want to hump ourselves while the country is all ours," Givens told them.

"Stands us in hand to do that very thing," agreed Cooper. "But, first and foremost, we've got to rustle up some meat. Can't have any dinner till we get some, you recollect. We'd better start two of our number out to kill game, while the others keep on working till dinner's ready. Or at least until there's meat to broil."

"Who want's to go?" asked Sanders. "Don't all speak at once! For my part, I'd rather stay here and pan dirt. Somehow this gold digging has cast a spell over me. I don't want to do anything else, or think about anything else."

"Same way with all of us, I'd guess," answered Holloway. "We'd every one rather dig for gold than eat or hunt. If anybody wants a rest from digging, let 'im sing out. Otherwise we may have to pull straws to see who shall go."

Now Givens spoke: "Tell you what, boys. I wouldn't mind a change for a spell. Think I can soon stir up some game. So, if that suits all around, the rest of you can go on digging while I take a little stroll with my gun."

"You may have to take a rather lengthy stroll, Jeff," spoke up Holloway. "For several hours before we stopped here I noticed that we were not seeing any game. For some reason, I don't know what, we'd passed out of the game country."

"I noticed the same thing, and spoke of it to some of you," said Sanders. "Wonder why it was. Plenty of water and grass here."

"I'd say there is plenty of grass here," broke in Orlando. "Brindle hasn't had better grazing since she left Illinois. She'd get fat as butter if we lingered here long. But I recollect noticing we'd left all the game behind. We'd seen so much before I couldn't help wondering at it."

Now Cooper said: "Won't take any big sight of game for our dinner. Safe to say Jeff can knock over some animal or fowl that will make us a mess. So you'd better strike out right away, Jeff, and get back the first minute you can. The rest of us will be busy with our mining pans till you fetch us something for our frying pan."

Straightway Givens armed himself, crossed the little valley and began to climb the mountain slope. At the same time the others, after putting the lid on their pot of gold and setting it aside, fell to digging up dirt again and washing it out.

CHAPTER TWENTY-FOUR.

But scarcely had they got well started when Givens, now puffing and gasping and red in the face, suddenly appeared on the creek bank above. Cooper, with a panful of dirt in his hands, was the first to discover him.

"Why, Jeff! How did you come to get back so soon? What did you kill? I didn't even hear you shoot."

"Shoot—nothing," gasped the hunter. "Mighty glad to—to save my—my own bacon! Fellows, I've got to—to tell you the truth! We've sold our lives—sold 'em for a little stew pot mess of gold. We're no better than—than dead men, every one of us!"

At this startling announcement all the

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I want to tell the Family Circle how I have made a "drawn in" rug. I took a good, firm gunnysack and hemmed the edges with a narrow hem and sewed the sack on to a frame made of four lath, sewing it on with cord. I marked the design with chalk, the pattern being a black center with red roses. I rolled the sack so as to work the center first, as it is easier that way.

For the black I used old stocking legs and an old woolen skirt; the red was bits of an old wool sweater. After the center was in I made rows of different colored stripes and I think the prettiest was "hit or miss," made of all sorts of odds and ends, new and old, the brighter the better. I colored some rags orange and some red and I had some blue which helped to brighten the stripes. The rags are held on the under side and drawn up.

The hook was made by my husband out of a long, slender spike. He filed off the head and put on a wooden handle, then filed a hook in the other end and I like it better than one I bought long ago.

These rugs are not hard to make and last a long time and use up rags which are good for nothing else and would have to be burned. I have just finished one which cost me just 30 cents.

MRS. HATTIE M'CLURE,
St. Maries, Idaho.

Dear Mrs. Barland: We have a nice little home three miles from Blackfoot, Idaho, and expect to make a living with chickens and small fruit. We have been here but one year, so have hardly got started yet, but expect to put out 1000 strawberry plants this spring and start more raspberries. We already have 2 rows 14 rods long. From those I picked $65 worth of fruit last year at the market price.

I have been a reader of the Circle for some time and have received many helpful hints from it. MRS. A. D. H.
Blackfoot, Idaho.

Dear Mrs. Barland: Some time ago you asked for suggestions for school lunches and I will tell you what I pack into the lunch box for the little girl I have with me. Two bread and butter sandwiches and one meat, often chicken; 1 piece of cake, 1 cup custard and an apple for recess. I make raisin bread quite sweet almost like cake and she likes it made into sandwiches. I always add a bottle of milk.

MRS. W. C. D., Wash.

Dear Mrs. Barland: We formerly lived in Idaho and have taken THE FARMER for a number of years. We live now five miles east on the electric line from the big city of Lincoln, Neb. We have a 5-room house all finished off in city style. It is built on an incline with a basement facing south, warm in winter, cool in summer. We have about 3000 inhabitants in this town of College View. There is a college, a high school, two churches and the ward schools, about 1000 pupils altogether in the schools. We have no pool halls, theaters or movies here. Whoever wants these must go to the city for them.

Our summer has been hot and very dry and grain of all kinds was badly damaged.

I belong to four correspondence circles and all of us look forward to the letters eagerly as they make their rounds. We get much pleasure from them. I agree with the editor that the long winter evenings are almost here now and we can spend them with our pen friends. Let us see which can write the most interesting letters for the Family Circle. This is my first letter and I must not say too much, so I won't be turned down and can come again.

Your Circle friend,
MRS. M. L. M'CABE.

Home Recipes

Chess Pie—One half cup sugar, 1 teaspoon butter, 2 heaping teaspoons flour, yolks of 2 eggs and whites of 1, 1 1-2 cups of sweet milk, 1 teaspoon of vanilla. Cream the butter and sugar and add the flour and eggs beaten separately, then the milk and vanilla; bake as custard pie and use the other 2 whites of egg for meringue.—Mrs. H. H., Oregon.

Wedding Cake—5 pounds of sugar, 50 eggs, 5 pounds flour, 5 pounds butter, 15 pounds raisins, 10 pounds currants, 3 pounds citron, 1 pint strong coffee, 4 ounces nutmeg, 4 ounces mace, 1-4 ounce cloves, 1 ounce cinnamon. This will make 44 or 45 pounds of cake and will keep for 20 years.

A READER OF THE FARMER.

Mince Meat—4 pounds lean beef chopped or put through food chopper, 1 1-2 pounds beef suet chopped fine, 10 pounds apples chopped, 5 pounds seeded raisins, 5 pounds currants, 2 pounds citron, 6 pounds sugar, 5 tablespoons cinnamon, 2 of nutmeg, 2 of cloves, 2 of allspice, 2 tablespoons of salt, 2 quarts of sweet cider or boiled cider. Cook till the apples are done. The beef should be cooked beforehand, but the suet should be cooked only with the other ingredients. This will keep in a cold place for a long time unsealed, but it is better to can it as you would fruit in glass jars. I have used this recipe for many years. A. W. B.

Prune Conserve—Seven pounds of fruit, seeds removed, 5 pounds sugar, 2 oranges and 2 lemons ground through the food chopper, 15 chopped walnuts. Cook 1-2 hour and seal.—Mrs. Archie Buford, Oregon.

Apple whip: Grate one large or two small apples, beat the white of an egg till it stands, then beat into that one cup of sugar and to this add the grated apple and beat it all for 15 minutes, till it looks and tastes like whipped cream. This makes a fine filling for a cake or a dressing over anything where you would use whipped cream. Try it. A. W. B.

Molasses Cake—1 cup sugar, 1-2 cup molasses, scant, 1 level teaspoon soda dissolved in a little warm water, 2 cups of sour or buttermilk, if you do not have it use cold coffee, but if buttermilk is used less shortening is required, 2 teaspoons each of cinnamon and allspice, 1 teaspoon of nutmeg, 1-2 teaspoon of cloves, flour to stiffen. Bake in a moderate oven 45 minutes. Raisins can be added if desired. If used dredge them with some flour before adding. MRS. G. N. J., Idaho.

Johnny cake: One cup flour, one-half cup good yellow corn meal, one-fourth cup sugar or a tablespoon of honey, one-half teaspoon salt, one teaspoon cream of tartar, one-half teaspoon soda crushed fine before measuring, one cup sweet milk, one egg, one tablespoon shortening.

Mix all the dry ingredients together thoroughly, add the milk, into which the egg has been added, well beaten, and the shortening, melted, the last thing.

MISS A. B.

Just Folks

As far as you yourself are concerned, INCOMPETENCY is the brand placed upon everything you buy and upon everything that is given to you.

On the other hand COMPETENCY is the brand upon everything you make and upon everything you find by search.

If you can make a pair of shoes that will give you good service your competency is established as a shoemaker; if you buy a pair of highly finished shoes made in a specialized shoe factory your incompetency is established as far as shoemaking goes.

The most competent person I have known or of whom I have read was the pioneer grandmother. She could supply more of the common wants of life than any of her descendants.

The most competent person today is the housewife who does her own work.

You may say that the expert bookkeeper is a more competent person than the jack-of-all-trades. That depends. If the jack-of-all-trades merely putters and does not accomplish anything definite in supplying the wants of life, then he is an incompetent. But if he can supply many of his wants and those of his family through his own labor, then he is a competent person and his character bears out a broader individuality and he is more of a man than the highest specialist in the land who confines his labors to his specialty.

The man who has acquired the art of walking is a more competent man than he who has never acquired the art of walking because he is carried whither he wishes to go.

A degeneracy has come over our language when we use the word competency in the sense of having a monetary income which will supply the needed wants of a man and his family. There is also a certain degeneracy which has overtaken our highest specialists. While they have ascended the heights and have given invaluable aid to civilized life, just so far as they have confined their attention to that specialism have they lost that wholesome character which marks the competent man or the competent woman.

In fact, it remains that common people may become competent in a larger degree than uncommon people. The mechanic who supplements the routine of his daily life by fixing up things around his home, by cultivating a garden, by milking a cow, or doing some of those things which go to make life more livable, is a far more competent man than he who is able to hire all these things done for him.

At the same time I am ready to admit that the progress of civilization demands the progress of specialism, and yet civilization itself has its drawbacks.

Christmas Gifts

Inexpensive and Easy to Make

By H. A. LYNAN.

Bean Bags for Christmas Tree.—Some crochet bean bags may be easily made of colored crochet cotton, which can be bought at 5 cents a spool, one spool for each bag; a single stitch worked closely together is very appropriate. After filling the bags may be closed with a crochet needle.

A Book Without Cost.—A pretty Christmas gift may be made by taking the leaves containing a continued story from any magazine. Make covers of pasteboard covered with colored paper and tie in the form of a book, with ribbon bows. This is an especially acceptable gift for an invalid, as it has so little weight and with more durable covers it is very attractive.

A Scrapbook.—Save all the paper slips that come in packages of any description, to make little booklets. These when tied together at the top are fine for pasting in little pictures, poems or columns of jokes. Have a picture pasted on the top.

Any Child Can Make This Gift.—Put some earth or sand in a shallow dish and just cover it with water. Buy rice seed or, better, get a pound of cheap rice at a grocery and pick out the black unhulled seeds. Plant the latter in the mud, and keep the dirt wet. The rice will grow into a plant which closes its leaves at night and opens them in the daylight. Children love to watch the development of such things, and the care required, while not exacting, is enough to make the gift a labor of love.

A Home-made Game.—Get half a dozen cork stoppers and gild them. Into one end of each push the pointed half of a medium-sized sewing needle, so that it will stick out one-half an inch; into the other end stick a short feather, cut arrowhead shape. Try throwing the darts into a soft piece of wood, altering them if necessary, till they are balanced, next make a bull's eye by drawing circles on a soft board and numbering them from 10 in the center to 8 on the outside. Make a chalk mark on the floor, and have the players stand inside that to throw, then proceed exactly as if shooting at a mark, each using three or six continuous shots. Make the game as long as you wish, the highest score in so many shots winning. Boys and girls enjoy these at Christmas time.

An Attractive Bureau Cover.—Make it of dotted Swiss, with dots as large as a dime, two or three inches apart. On the under side make petals of shadow embroidery for each dot, and on the right side work the dot over in yellow. The result will be a scarf of field daisies.

An Autograph Guest Book.—Use a pretty blankbook and decorate it in any individual fashion, have a pencil attached. It will be a very acceptable gift from a girl to her mother. As years go by such a book will become interesting and valuable.

Pretty Baskets at Low Price.—Buy small baskets for 5 or 10 cents. Fill with dainties, such as shelled nuts, figs, dates, raisins and candies. In the larger ones a glass of jelly may be placed, as well as fruit. Tie up with bright ribbons, with a pretty card attached. These baskets make lovely gifts for old people, invalids or children.

For the Christmas Fireside.—This is a most appropriate gift, a bag of pine cones, a part of the supply which many people have already collected for their own use. Make a bag of red material, one yard long. Make a heading of two inches and stitch a spare one inch wide for double drawstrings of grosgrain ribbon or similar material. Fill the bag with cones, draw the strings tight and send it, with warm wishes for a bright Christmas.

From the City.—The city friend who has enjoyed the hospitality of country people in the summer may send for Christmas a most acceptable box filled with little things picked up in the city shops, odds and ends that are never seen in the country. Many may be suitable for table use.

Over 3,000,000 Users Endorse
New Kerosene Light
Beats Gas or Electricity

MAKE your home bright and cheerful, saving one-half on oil. Scientific tests prove this wonderful new Aladdin 5 times as efficient as the best round wick open-flame lamps. 60 candle power pure white light for 50 hours on a gallon of common kerosene. No odor, smoke, noise or pumping up. Won't explode. **Guaranteed.**

10 Days' Free Trial

Prove to yourself by free trial that Aladdin has no equal as a white light. If not satisfied return at our expense.

Get Yours Free We want one user in each locality to whom customers can be referred. In that way you may get your own without cost. Be the fortunate one to write first for 10 day free trial and learn how to get one free.

AGENTS WANTED To demonstrate the Aladdin in territory where oil lamps are used. Experience or capital unnecessary. Many agents average five lamps a day and make $500 a month. Write quick for territory and samples.

$1000.00 REWARD Will be given to anyone showing us an oil lamp equal to this Aladdin in every way. (Full details of this offer given in circular.)

Modern Automobile and Tractor Schools

High Points in News of the Week

The measure proposing a government ship subsidy to assist in placing the American merchant marine in position to adequately compete with foreign ship owners was taken up in the extra session of congress which convened last week. The measure is being bitterly opposed by a considerable number of congressmen and senators. It is likewise being urged vigorously by others. In his official message to the extra session of congress President Harding went on record again strongly favoring the early enactment of this measure. The greater portion of the president's message was given over to argument in favor of its passage. He urged protection of American commerce throughout the world and urged upon congress the necessity of enacting legislation in behalf of agriculture, which he acknowledged to be the greatest victim of deflation following the inflation of the war period.

Friends of the proposed ship subsidy bill point out the fact that foreign shippers are anxious to see it defeated. They declare that foreign shippers realize that if American shipping is built up as this measure proposes it should be their own profits will be reduced. A cablegram from London last week declared that news from America indicating a possible defeat of the ship subsidy measure had caused stock quotations in the various British shipping companies to rise several points.

* * *

Former Premier Clemenceau of France is meeting with both sympathy and opposition in this country on his present visit. Last week he stated that a leading factor in bringing him here was a desire to induce the United States if possible to send an official delegation to the present Near East conference that is meeting in Switzerland for the discussion of plans of settlement between the allies and Turkey. He declared that there was close relationship between the Turkish uprising and the movement on the part of the monarchic element in Germany for a restoration of their power. He declares that Germany can not be trusted and that France is only endeavoring to protect herself and the rest of Europe against future conflict. Those who criticize the former premier declare that he is largely responsible for the distressful condition now existing in Europe in that he virtually forced upon both Germany and the allies the peace treaty following the war, which they declare is impossible of fulfillment.

* * *

President Harding's cabinet last week devoted an entire session to the discussion of ways and means of more effective enforcement of the prohibition laws.

* * *

M. R. Marshall, secretary of the National Wool Growers' association, last week declared that the entire 1922 wool crop had been marketed. He credited better prices and prospects for good prices throughout 1923 to the emergency tariff measure and to the recently enacted permanent tariff bill.

* * *

The United States department of justice has filed suit for the collection of more than $20,000,000 from the contractors who built four of the leading military camps during the war. The suit was based upon alleged fraudulent dealing on the part of the contractors. A considerable number of similar suits are pending and it is estimated by the department of justice that between $70,000,000 and $80,000,000 should be collected from contractors who are alleged to have committeed frauds.

* * *

Officials in a number of states have recently announced their intention of endeavoring to secure legislation against the Ku Klux Klan. New York is one of the states planning legislation of this kind. A proposed bill in that state would require all secret and fraternal societies, including the Ku Klux Klan, to file complete lists of their memberships with the secretary of state.

* * *

The several railroad labor organizations and the American Federation of Labor are consolidating the charges which are being prepared for submission in proposed impeachment proceedings against United States Attorney General Daugherty. The attempt to impeach Mr. Daugherty is based upon his action two months ago in securing an injunction preventing railroad strikers in any way interfering with railroad transportation.

* * *

Closer coordination and reduction in overhead expense are among the objects to be obtained through the proposed consolidation of the Great Northern, the Northern Pacific and the Burlington railroads, according to high officials of these companies who are seeking the consolidation. The hearing for the proposed consolidation will be held by the interstate commerce commission.

* * *

At a conference between President Harding and United States Senator Watson of Indiana last week the problem of aiding the farmer was taken up in detail. Senator Watson told the president that credit would be only palliative and not actually remedial if the producer must continue to produce crops and live stock and sell them at prices little above, if not actually below, cost of production. The senator declared that the spread between the producer and the consumer was unwarrantedly high and that he believed the way to remedy the evil was to enact a measure that would require that all profit all along the line be exposed to public knowledge so that an aroused public opinion would drive extortioners out of business or compel them to sell at reasonable profits.

* * *

A hearing is expected to begin in the lower house of congress December 6 on the Columbia basin bill, which passed the senate just before the recent adjournment. The measure would appropriate $100,000 for a government survey of the proposed project.

* * *

President Harding has decided to continue United States control of coal distribution at least until January 1. The purpose of this federal control is to cause the available supply of coal to be so distributed as to serve industry in general and at the same time permit as much coal as possible to be used as family fuel.

* * *

An effort is being made to have the United States supreme court rule immediately upon the constitutionality of the grain futures act. Enforcement of this act against the Chicago Board of Trade and a few other similar exchanges has been postponed on order of the district court, pending the hearing as to the constitutionality of the act by the supreme court.

* * *

The official bill setting up the constitution of the Irish Free State has been published in England, thus completing the technical process of placing Ireland upon a basis similar to that of Canada with reference to the mother country.

* * *

A movement has been started looking toward the even production and even distribution of coal throughout the entire year as a means of stabilizing the industry and somewhat regulating the cost of fuel.

* * *

Fred H. Bixby of Long Beach, Cal., president of the American National Live Stock association, at an informal hearing last week by members of the house banking committee, urged favorable action on the Capper bill, providing for long-time payments of cattle paper.

* * *

The supreme court of the United States recently upheld the validity of legislation and city ordinances which compel the vaccination of children against diseases as a school entrance requirement.

The decision was handed down in the case of Rosalyn Zucht, a high school girl of San Antonio, Texas, who had sued the health authorities of that city for damages because it barred her from school, following her refusal to submit to vaccination. The case attracted nation-wide attention.

The girl challenged the validity of the city ordinance and carried her appeal to the supreme court. The decision was deemed of importance to thousands of communities which have similar ordinances.

The supreme court denied her claim for damages and declared the ordinance legal.

To Measure Hay in Stack

By E. G. SCHAFER,

I would like to know how many tons there are in a stack of hay 60 feet long, 3 feet above the ground, 14 feet wide and 32 feet over the stack. Mixed timothy and alfalfa settled in stack. N. J. J.

When it is impossible to determine the actual amount of hay in a stack by weight, the amount is sometimes estimated from measurements. A common rule for measuring hay is known as the Frye-Bruhm rule in which the width, length and over measurements are used. The "over" is the distance from the ground on one side over the stack to the ground on the other. The width is subtracted from the over, the result divided by two then multiplied by the width, and the product multiplied by the length. This result will be the approximate number of cubic feet in the stack, and is divided by 512 to obtain the number of tons.

Another rule sometimes used is "width plus over, divided by 4 and squared, then multiplied by the length and divided by 512." A smaller number of cubic feet are required to make a ton in a large stack than a small one, and one that has completely settled weighs heavier for a given volume than a new stack. The character of hay may also be a factor.

The stack for which the measurements were given according to the first rule would have 7560 cubic feet. This figure was obtained by the following rule in this manner:

32 minus 14 divided by 2 times 14 times 60 equals 7560. This amount divided by 512 gives 14.8 tons. The number of cubic feet obtained as the use of the second method is 7935 and was calculated as follows:

14 plus 32 divided by 4 equals 11.5. 11.5 times 11.5 times 60 equals 7935.

This amount divided by 512 gives 15.5 tons. If it is desired to divide the stack in definite quantities more trustworthy results may be secured by dividing it vertically than horizontally.

IS THE HINGE RUSTY?

Don't break a good hinge by using it while rusty. Oil it.

Fruit Shipments Are Far Behind

Only a continuation of the present mild weather will save the apple growers of the Wenatchee district from a further loss from freezing. To date 5700 cars of apples have been shipped out of about 12,700 cars, leaving 7000 cars. There is cold and common storage available for about 6000 cars, including temporary arrangements that have been made. Corresponding conditions are understood to exist in the Yakima valley.

There were left in the Wenatchee district 1000 cars on November 20 and shipments were averaging about 100 cars daily. Even adequate storage would not prevent further loss from deterioration on the part of apples that should be on the market in the east now.

Last year over 10,000 cars of apples had been shipped by November 25, compared with less than 6000 this year. While many cars of all kinds are reported to have been ordered turned over to the Great Northern and other northwestern roads, few of them have been getting through to Wenatchee. About 125 cars daily are being turned over to the Great Northern at Minnesota transfer, but receipts at Wenatchee have been running less than 100. The balance are probably used for loading potatoes or other products on the way out.

There are still about 3000 cars of apples that should be moved east before January 1 in the Wenatchee district in order to market them to the best advantage. About 1000 cars of these will probably never be shipped on account of poor condition. The other 2000 cars will be moved if cars can be obtained, provided the weather does not turn too cold.

It is said that claims for damages are being prepared against the Great Northern by many shippers in the district. Some of these are based on damage to fruit in transit; other are caused by failure to furnish cars for fruit ready for shipment. Shippers are hearing daily from eastern receivers as to apples arriving there in poor condition, and in many cases these apples left Wenatchee in good shape, according to railroad inspection reports.

Refrigerator car trains that usually made the Twin Cities in six days are now taking from 11 to 17 days, which accounts for some damage to fruit in transit.

Farm Business and Markets Outlook

Bits of Fun for Everyone

Mortoristically Speaking.

"Hey, mister, this cheese sandwich."

"Smatter with it?"

"The gasket is too thin."—Farm Life.

The Kind He Was.

"For a spiritualist, that chap is the most complete joy-killer I ever knew."

'Ah hah! Sort of a pessi-mystic, eh?"—Farm Life.

Get the Money—and Save It.

"Every man ought to save up enough money to buy a farm and get back to the land," shouted the orator with a mission.

"Yes, and then do something else with the money," remarked a sad-faced farmer in the audience.—Orchard and Farm.

Pork Barrel Politics?

"Mrs. Jones, kin Johnny go with us to see Elihu root?"

"Why, I didn't know he was to be in town."

"Whatcha mean, in town! Elihu's our big red hawg!"—Orchard and Farm.

A Queen's English.

Mrs. Stevens had offered liberal wages and privileges, but still the general housework seemed a little undecided about coming. 'Do you do your own stretchin'?" she asked suddenly.

"Do we do our own what?" Mrs. Stevens asked, puzzled.

"Stretchin'," repeated the woman. "Do you put all the food on the table and stretch for it yourself, or do I have to shuffle it around to you?"—Successful Farming.

His Busy Day.

He—You know I love you; will you marry me?

She—But, my dear boy, I refused you only a week ago.

He—Oh, was that you?—Orchard and Farm.

It Belonged to Kitty.

"Oh, mother!" cried youthful Mildred. "I found a little flea on kitty and I caught it!"

"What did you do with it?" asked mother.

"Why, I put it back on kitty again, of course. It was her flea."

What Baby Inherited.

"Ah!" admiringly said the visitor. "The baby is talking at an unusually early age, isn't he?"

"Eh-yah!" replied the gaunt mountaineer. "He took that from me, and the commanding tone in which he does so from his maw."—Country Gentleman.

A Soft Job.

"Yes," remarked Ben Gonnadooit, yawning. "When I was with the railroad company I had the best job I've ever held. I wish I had it now."

"And what was that?"

"I was assistant to the man who taps the wheels of the cars to see if they are all right. I helped him listen."—Orchard and Farm.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Perhaps the most common ailment of the human family is imperfect bowel action. Many persons are constipated from earliest life to the end of their careers This is particularly true of those who are engaged in sedentary pursuits.

Dr. Copeland.

The chief reason why office people workers, and practically all indoor workers are constipated is because their muscular tone is below normal.

It must be remembered that the walls of the stomach and intestines are made up largely of muscle tissue. It is unreasonable to expect these abdominal organs to function if the general muscular action is defective.

The surest preventive of constipation is the possession of such general muscular vigor as to insure proper stomach and intestinal activity.

To correct long-standing disability of this sort, first attention should be given the general soundness and robustness of the body. Unless you are whole and hearty, elastic and vigorous in your voluntary muscles, you can not expect the muscles of your heart and digestive organs to show great power.

When you study your body functions and use common sense regarding them, you will have a better time and increase your chance of long life.

As applies to the relief of constipation, this means that you will not trust to castor oil, salts, enemas and the various drugging methods which can not be curative, but which merely drive or force the bowel to discharge its contents. You will seek to improve the general tone of your body. You will live such a life of activity as to build up your physical force.

The first consideration in constipation is the restoration of general muscular vigor. There are a few measures which really assist, and many which give temporary relief, but no cure is to be expected until the muscular tissues of the whole body are normal in tone and quality.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3714. Girl's coat. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2 5-8 yards of 46-inch material. Price 10 cents.

4177. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 5-8 yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

4187. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 3-4 yards of 44-inch material. Price 10 cents.

3917. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require three yards of 40-inch material. Price 10 cents.

4181. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 3-8 yards of 40-inch material. The width at the foot of the skirt is 2 1-8 yards. Price 10 cents.

4193. Ladies' apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 36-inch material. Price 10 cents.

74th Year Embodying all the new and improved features—maintaining the old-time reliable quality.

Heating and cooking apparatus for all fuels and requirements.

HOLLEY-MASON HARDWARE. CO., Spokane, Wash., Distributors in Spokane and Spokane Territory.

Charter Oak Stove & Range Co., St. Louis, Mo.

This is our first letter from Selma Paananen, a west Washington girl. Selma's birthday is October 28. She is 10. At school Selma is in the fourth grade. She has five sisters and one brother.

Nellie Thompson says she attends school two miles from her home with her brothers. She is a fifth grade student. Nellie is 10 years old, is four feet seven and a half inches tall and has blue eyes. She lives near White river in western Washington. Her birthday is March 13.

In a program Halloween Zelma Graham played the part of a fairy. She was dressed in pink crepe with silver tinsel trimmings and big white wings. She had her picture taken in her fairy dress. Zelma belongs to a club called the "Jolly Club." She says they try to live up to the name of their club. Soon they will commence sewing on their Christmas presents. Zelma is a Lincoln county (Wash.) cousin.

"We have fun at school. We have a merry-go-round and a bag swing," writes Sylvester Bear. Sylvester is 9 years old. July 23 is his birthday. Sylvester lives in northern Washington. He has a baby sister three months old with blue eyes and black hair. Baby's name is Vera.

Clarence Bear is 5 years old and he is in the first grade at school. There are three pupils in his class. Clarence has a dog named Fido and three kittens for pets. This is his first letter. Clarence has four sisters and four brothers. His home is in northern Washington, Okanogan county.

A new cousin in Stevens county (Wash.) is Virginia Weldert. Virginia is 9 years old. She did not know anything about the Corner until her friend Viola told her about it. She and Viola ride horseback two and a half miles to school every day. Her birthday is March 10. (Write to us again, Virginia.)

Marjorie Priscilla Cruson is a new cousin who lives on a farm near Case Inlet, in Mason county, Washington. Marjorie has a little colt named June. There are also two horses, three cows and some pigs and geese on the Cruson ranch. Marjorie is 10 years old. Her birthday is May 24.

Winnifred Goodard lives in the country in Thurston county, Washington, near a little town. Her papa owns a sawmill there. Winnifred thinks the Junior Farmer is the nicest paper she ever read. (Tell your cousin to write to Aunt Nellie, Winnifred.)

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Edna Shaw, Ida May Rozelle, Alice Coons, Marjorie Priscilla Cruson, Winifred Goodard, Sylvester Bear, Clarence Bear, Doris Harrel, Selma Paananen, Nellie Thompson, Zelma Graham, Verna Ferch, Leda Ruby Harrel, Kathryne Buckley, Edna Johnson, Leo Kunty, Oscar Kunty, Florence Boner, Herbert Boeck, Jean Lockwood, Marcus Ruth, Alice Pratt, Frances Chudek, Alvin Eshelman, Beatrice Warfield, Ferne Daugherty, Roger Stone, Oren Hyrkas, Marie Kirshner, Edna Van Aalsburg, Pauline Weis, Marion Ruth Hamilton, Amanda Nickel, Albert Barraford, Esther Jeske, Harriet Kruse, Violet May Clark, Sophia Philugrath, Emma Jeske, Orla Kirchner, Calvert P. Baker, Alvena Walter, Clara Hyrkas.

BEDTIME STORIES

By THORNTON W. BURGESS.

DIGGER SHAMES JOHNNY CHUCK.

Johnny Chuck had been in the sulks for days and days and days. He was too cross to be spoken to. No one knew what to make of it, for Johnny Chuck is usually the happiest and best matured little fellow in the world. The fact is Johnny Chuck was jealous. He was jealous of Digger the Badger because Digger could make a hole in the ground faster than he could.

So Johnny Chuck sat on his doorstep and sulked until all his friends and neighbors went out of their way to keep from going by his house. Now, all this time Old Man Badger, who is called Digger, had been so busy in his new home on the Green Meadows that he had not had time to call on Johnny Chuck, and he had not heard a word about the way Johnny Chuck was feeling. Then one day Digger found he had a little time with nothing to do.

"I'll just go call on Johnny Chuck and take him a bundle of tender, young cabbage leaves from Farmer Brown's garden," said he to himself. So he hurried over to Farmer Brown's garden and picked out the niecest, tenderest young cabbage leaves that he could find. He rolled them up in a bundle and tucked them under one arm, and off he started up the Lone Little Path.

When he came in sight of Johnny Chuck's house, Johnny Chuck was sitting on his doorstep looking as if he had lost his last friend. He was so busy thinking mean, jealous thoughts that he did not see his visitor approaching.

"Good afternoon, Johnny Chuck," said Digger as he took his hat off and fanned himself.

"Good afternoon, Johnny Chuck," said Digger as he took off his hat.

Johnny Chuck just grunted, for Digger the Badger was the last one in the world that he wanted to see.

"I haven't forgotten how nice you were to me when I first arrived on the Green Meadows," said Digger. "This afternoon I was going by Farmer Brown's garden and I saw some delicious tender young cabbage. It looked to me just as if it was grown especially for some one I know by the name of Johnny Chuck, so I brought an armful along."

Johnny Chuck felt his mouth begin to water. He could smell that young cabbage, and in spite of himself his little black nose would keep wrinkling. It was hard work, oh, dreadfully hard work, to keep sulky and cross and jealous with the smell of that young cabbage tickling his nose.

"I don't believe I care for young cabbage," said Johnny Chuck, and all the time he knew that he was telling a story.

Digger the Badger looked at Johnny Chuck out of his shrewd little eyes.

"It's a fine afternoon for a walk," said he, "and I must be moving along. I hope you'll come down and see my new house pretty soon, Johnny Chuck."

And with that Digger the Badger put on his hat and started off down the Lone Little Path. Johnny Chuck watched him go, then he looked at the bundle of tender young cabbage left behind, and in spite of himself he smiled, and with that first smile away melted all Johnny Chuck's sulkiness and ill humor.

YOU -are asked to give FARMER'S COOPERATIVE PLAN a little boost in your neighborhood

For six years THE WASHINGTON FARMER'S cooperative subscription plan has been a success, the credit for this noteworthy record being due to the loyal efforts of our readers in all parts of the state.

Now, a new subscription season is gathering momentum and we do not want to neglect any section of the state no matter how small. Every one is important. None should be left out.

Inasmuch as we have eliminated the subscription agent as a method for getting subscribers and have given the reader the benefit of the expense money thus saved, we must look to some individual in each and every neighborhood to act for us in the agent's place.

In your neighborhood the individual we look to is you, that is, if you are a believer in the principle of cooperation. What we ask of you is this—first, to see that your own subscription is paid well in advance; second, that when you renew kindly inclose some neighbor's order with your own, and third, if your own subscription is attended to for the year, to at least secure one new subscription order.

If each booster for cooperation in each locality does this much, our cooperative plan will duplicate the successful record which it has established each year during six consecutive subscription seasons.

Please let us hear from you soon.

Nov. 30, 1922.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash. .....1922.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to THE WASHINGTON FARMER.

(Rate: $1 for five years; 50c for three years; 25c for one year. In Canada 1c a copy extra.)

Name .....

Postoffice .....

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

Pike's Peak or Bust

(Continued from page fourteen.)

miners ceased work and approached the bank.

"What do you mean, Jeff?" demanded Sanders.

"I mean what I say! We're just six corpses! That's all we are!"

"Jeff, you must be out of your head," protested Holloway. "We're pretty lively corpses, seems to me."

"But how long—how long will we be lively? Right over that mountain are 10,000 redskins!"

"Ten thousand You're wild, Jeff! Couldn't be as many as that!" exclaimed Cooper.

"Well, there's a great army of 'em. I didn't count 'em. Never saw such a big camp of red folks before! Thousands and thousands of 'em!"

"You're excited, Jeff," Holloway told him. "Are you sure that what you saw was really Indians?"

"As sure as I am that I'm alive If you doubt it, go up and see for yourself!"

"That's just what I'm expecting to do."

"I'll go with you," announced Cooper.

They started at once, and Orlando accompanied them, all carrying their guns. The three in camp examined their weapons, then dropped down on the grass to rest while they waited.

And not long did they have to wait. In a very brief time the three spies returned

"Jeff was about right, after all," Cooper reported. "Down yonder, two or three miles away, is what appears to be a small river. And in the valley, along the banks of that river, is a big Indian town. At a rough guess, there must be five or six hundred wigwams in it. And it's swarming with wild people."

"Swarming like an ant hill," agreed Holloway. "We could see 'em moving about. How they've failed to discover us all this time is a mystery."

"We've been as still as paterges here since we set in to diggin'," suggested Esau.

"To me the wonder is that they haven't noticed our smoke—our campfire smoke," said Orlando.

"But we've never yet made any smoke. That is, in daylight," Sanders reminded him. "Since we've stopped here all our cooking has been done before day in the morning and after dark at night."

"Right you are, Abe! And that accounts for the fact that—that our scalps are still on our heads,' 'said Holloway.

"And what are we going to do now?" demanded Esau.

"Do! Are you out of your head, man, to ask such a question?" exclaimed Givens, impatiently. "Only one thing we can do! And that's to hustle out of this redskin-poisoned country as fast as we can hoof it! I wouldn't give my life for all the gold in the Rocky mountains! Precious little good gold will do us after we're dead and scalped!"

"That's exactly right," Cooper said. "This is no place for a little party like ours. We can't slide out of this country too quick to please me."

"But who knows? Maybe those Indians are friendly," argued Orlando. He was greatly worried over leaving the only place where he had ever been able to earn much money.

It was Givens that answered: "Anybody that believes they're so all-fired friendly is perfectly welcome to go down there and see. But whoever goes won't find me here when he comes back—if he ever comes back."

"It's well known that all these mountain Indians are dangerous to white people," Sanders told them. "For my part, I'm not going to run any needless risk. Ninety-nine chances out of a hundred we'll never be heard of again if we fall into the hands of those savages."

"That's my guess, every time," said Esau. "We've got to dig out of here before they discover us. If we don't, it's farewell to our scalps. Even if they didn't put an end to us because we're—we're palefaces, they'd be dead certain to tomahawk us for our gold."

"Yes. Plenty of white men would do that," declared Sanders. "That is, if they had a chance, and suspicioned how much we've got."

"Only one question, it seems to me." Esau was speaking. "Must we start now? Or had we better hide here till after dark and then try to slip away?"

"We cain't shake off the dust of this country too quick to please me," spoke out Givens. "Even if I was tired of living myself, the old woman and the little shavers back in Missouri are needing me mighty bad."

"Guess we've all got somebody needing us about now, Jeff," Holloway answered, with a grin. "And the sooner we get on the way to 'em, the better chance we'll have not to keep 'em needing us forever."

At once the whole party began to pack up, silently. And they soon had their few belongings in shape for carrying.

"How are we going to carry our pot of gold?" asked Sanders. "We won't dare take time to divide it now."

"Brindle's been resting and eating while we've been working. No reason we shouldn't stow it away in her pack, where the pot was," the cow's owner answered.

And Cooper added: "Guess she's the ablest one to carry it. But we've got to tie the lid down with buckskin strings, so's the gold won't spill out, even if the pot turns over."

When all precautions had been taken the pot was placed in the bottom of one of those big rawhide pockets, with other things packed on top of it.

"Now, boys, we've got to do some tall tramping before night overtakes us," Cooper told them. "As you all know, we're out of meat, and it won't be safe to shoot off a gun or light a fire till we're many, many miles from that Indian camp."

Promptly they all started, following up the stream. But scarcely had they got in motion when several sharp barks from Frisk caused them to halt suddenly. The dog had his gaze fixed on the top of the near mountain.

Raising their eyes, they saw, between themselves and the sky above the mountain ridge, a lone Indian. And the Indian, standing motionless as a statue, was gazing down at them!

Scarcely had the lone Indian discovered that he had been noticed by the white men, when he was seen to turn and dash furiously away. Still running toward that big encampment, he quickly disappeared.

"Worse and more of it!" exclaimed Jess.

"Now, boys, we've got to travel, and travel hard," Cooper remarked, quietly. "That red spy won't draw a breath till he lets his people know that white men are close by. It's two miles to that wigwam

And the Indian, standing there motionless as a statue was gazing down at them.

town, or maybe two and a half. That gives us four or five miles the start. It will be climbing most of the way, and these mountain Indians are used to that from childhood. They'll have the advantage of us all the time. They may follow us across the snow cap, or they may——"

"I can climb as fast as any redskin!" Esau declared.

"So can I—so can I" exclaimed Givens. "But hadn't we better cut loose from everything—packs, cow, gold and all—and run like good fellows for our lives? My life's worth more to me than everything else on earth!"

"No—no! Let's hang to what we've got!" protested Orlando. "Brindle can march with the best of us. And we can travel nearly as fast with our packs as without 'em."

"Yes, I'm for taking everything with us," Sanders said. "We can outrun the red rascals till dark. After that we'll give 'em the dodge. By morning we'll be so far away they'll have a whole lot of trouble overhauling us."

"We can do that, or try to, Abe," Cooper answered. "But there's not a minute to waste. Let's be on the move. Jess, you're pretty good at finding the way. You'd better take the lead."

(To be continued.)

News for Breeders

HOGS AT EVERETT SHOW.

The attention of The Washington Farmer has been called to omission in the report of two breeds of hogs at the recent live stock show at Everett. In the Duroc-Jerseys all the awards went to A. Turley of Munroe, except first on junior boar pig and first on pen of three junior sow pigs, which went to W. F. Sheets of Alderwood manor. In the O. I. C.'s, A. E. Jewett of Lakewood won first on aged boar and Arthur M. Wade of Marysville was awarded first on aged sow, third on junior sow and first, second and third on junior boars. W. J. Mosier won second on aged sow. In the Chester White class, Ed Hoem of Snohomish won first and second on junior sows.

SAN JUAN'S NEW JERSEY RECORD.

San Juan county reports a new Jersey record for that district with Mistletoe's Melia Ann, a mature cow that produced 11,384 pounds of milk and 706.16 pounds of butterfat in the last year. She is 11 years old and is owned by Shortly Brothers of Orcas. The cow was purchased at the Hewitt sale at Monmouth, Ore., in 1920, for a foundation cow, but her heavy production on two milkings a day warranted her being placed on official test and milked three times a day. She is the dam of Ladd's Little Pauline, a silver and gold medal cow as well as having the medal of merit for producing 941 pounds of butterfat as a 4-year-old. Lad's Lady Ann, another daughter, is a gold medal cow.

Guernseys on Baker View

B. C. and C. M. Vander Griend have named their Guernsey farm, near Lynden, the Baker View farm, since it affords an excellent view of the Cascades mountains, including Mount Baker.

The foundation stock for this herd is largely Golden Secret and May Rose breeding, while a few animals were purchased from such sources as Judge E. L. Brady of Satsop and A. J. Sinnes of Mount Vernon. One of the first shipments of Guernseys received at this farm was five calves from the A. L. Gile herd at Chinook. The entire herd consists of 20 mature cows, which are purebreds, and 10 grade animals that will eventually be replaced by registered heifers.

The senior herd sire on the Vander Griend farm is Lily's King of Pleasant Acres, who is a son of the well-known Rex of Richneck, a Wisconsin animal. Five calves from this bull were shown at the Whatcom county fair at Lynden, winning two firsts and two seconds against heavy competition. The bull was obtained as a calf from the Fruit Brothers farm in Wisconsin.

"We are registering all our young animals under the herd name, Baker View," said Vander Griend, "and we expect to keep all of the old foundation cows in as good condition as possible in order to raise calves that will have individuality and produce similar type. Practically all of the young animals are calves that we have raised ourselves, and we are well satisfied with the winnings they have made each year at the county fairs."

NEW PACIFIC COAST RECORD.

In 305 days, as a senior 4-year-old, Hollywood Lilith Palmyra Abbekirk recently produced 22,245 pounds of milk and 982.94 of butter, thereby establishing a new Pacific coast record in class for both milk and butter and the second highest for milk and butter ever made by any animal of the breed. She holds the highest record ever made in this class by any cow having twin calves, and she exceeded the production of the cow which was world champion when she started test, but in the meantime another performer excelled both. She completes three direct generations of 30-pound cows; five of her seven nearest dams have 30-pound records, and her seven nearest sires all have 30-pound sons. This remarkable producer was bred in Washington, thus adding another to the long list of Holstein prodigies from this state. She is a daughter of Hollywood Lilith Palmyra, in service two years at Hollywood farm.

CHAMPION SADDLE HORSE.

The champion saddle horse Edna May's Choice has been given to the Utah Agricultural college by Ernest R. Woolley. The sire of the animal is the famous May's Choice and Edna May's Choice is declared to hold well up in standard to its sire.

ROGNSTAND BUYS BOAR.

During the Western Royal Stock show A. N. Rognstand of Kendrick, Idaho, purchased from Lester Daly the first prize Duroc Jersey boar pig, Jacob D., to head his purebred herd. The young boar is a fine specimen of the breed.

Belgium Imported Melotte

22% Cut In Price

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices. Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money.

Before buying any separator find out how the Melotte has won 264 Grand and International Prizes and how, for efficiency of skimming, ease of turning, convenience of operation and durability—the Great Belgium Melotte has won every important European contest. Find out why 500,000 Melotte Separators are in continuous use today.

Our 15 Year Guarantee

Every Belgium imported Melotte Cream Separator is sold under an absolute, ironbound, 15-year guarantee. No Melotte is ever sold except under this guarantee. A guarantee written in plain English so that you can understand it. A guarantee that is 100% stronger than any other separator guarantee ever made. A guarantee that really guarantees something—upon which you can absolutely rely—an absolute protection to the purchaser, and which binds us to our bargain.

What U. S. Government Says:

Vibration of a cream separator's bowl will soon cost you more money in cream waste than the price of your separator. U. S. Government Bulletin No. 201 says that a perfectly true motion of the bowl is *absolutely necessary*, the bowl is the vital part of any separator—the part where the cream separation takes place.

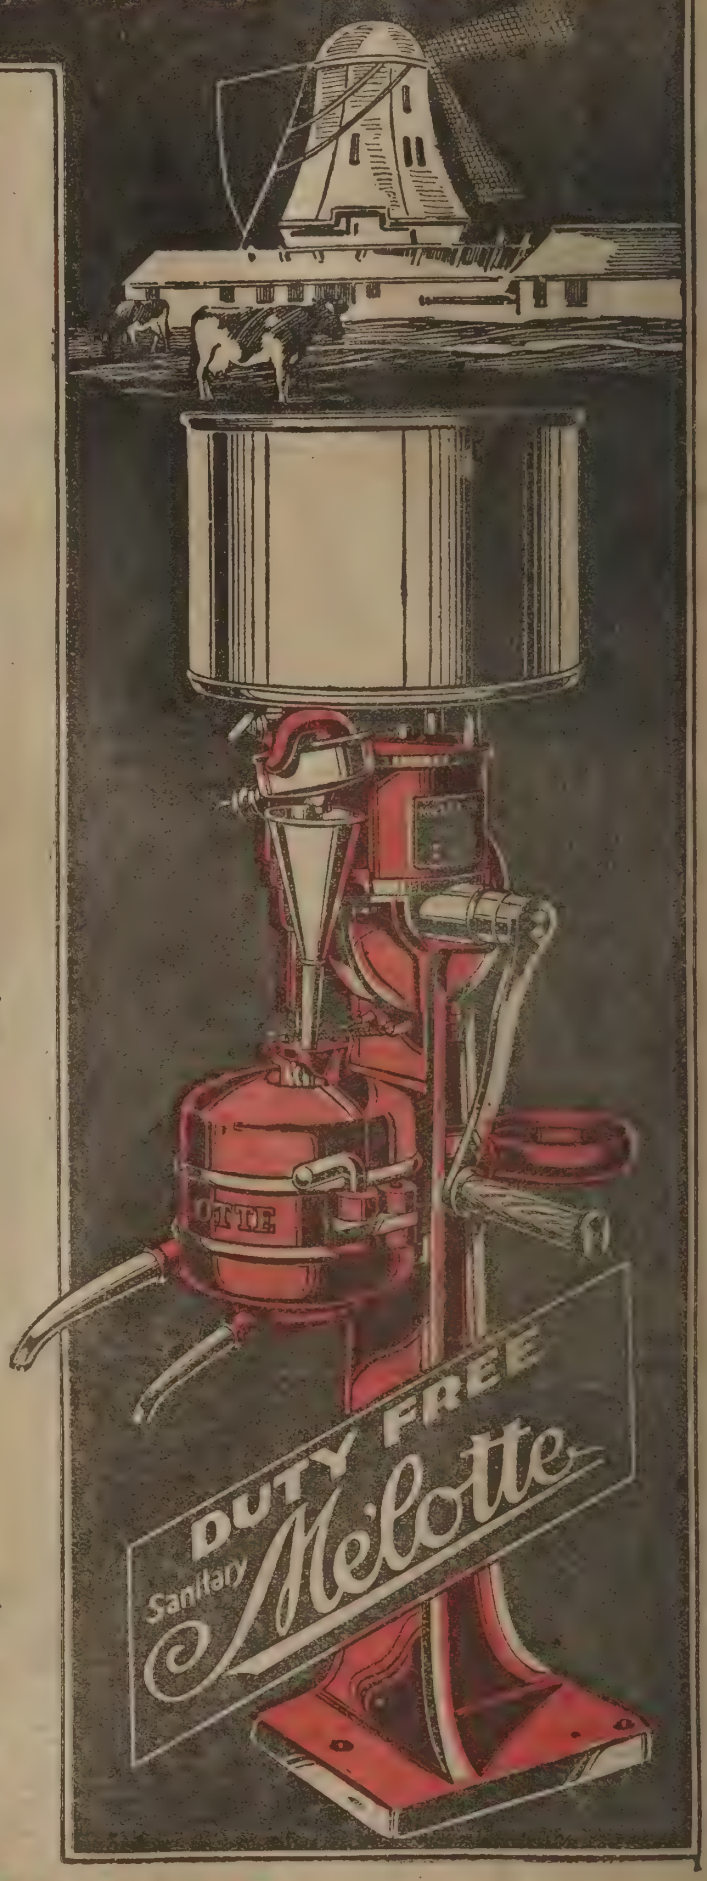
Self-Balancing Bowl

The Belgium Melotte is the only single-bearing-bowl separator made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively can not ever get out of balance—can not vibrate and thus cause cross currents which waste cream by re-mixing with the milk. The 600 lb. Melotte turns as easily as the 300 lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

$7.50 after 30 Days Free Trial

—NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days' absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Satisfy yourself that the porcelain bowl is as easy to clean as a china plate. Compare it—test it in every way.



When you are convinced the Melotte skims cleaner, turns easier, washes quicker, has one-half less tinware to clean, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Send No Money!—Easy Payments!

After 30 days free trial, then send only the small sum of $7.50 and the balance in small monthly payments. The Melotte pays for itself from your increased cream checks.

You're not to send one cent until you've used this great Belgium Melotte and have made up your mind it is the machine you want. Keep it for 30 days and use it just as if it were your own machine.

Compare the Melotte separator with any other—test them side by side. Then send your milk to the creamery. Let *them* prove which separator skims the cleanest.

Send This Coupon

Mail coupon for catalog **giving full description** of this wonderful cream separator. Read about the porcelain-lined bowl. Easy to clean as a china plate. One-half less tinware to clean. An exclusive Melotte feature. Other exclusive Melotte features described in full.

Don't buy any separator until you have investigated the Melotte. Take advantage of the 30 day free trial which Mr. Melotte has now authorized us to offer. Test the Melotte against all other separators and satisfy yourself as hundreds of American farmers have done that it is the world's greatest separator. The only separator that requires a brake. It is so easy to turn that it spins twenty-five minutes after you stop cranking. And remember it is guaranteed for 15 years. Don't wait—be sure to mail coupon TODAY!

THE WASHINGTON FARMER
ESTABLISHED 1894
SPOKANE. SEATTLE.

ONE of the beauty spots of the state of Washington is shown in the picture on this page. It is on Glen Tana farm, a few miles north of Spokane, on the Little Spokane river. Glen Tana, owned by Thomas S. Griffith, is one of the well-known dairy farms of the northwest, not only for its high records in milk and cream production, but for its winnings in the Jersey show ring. Many a champion and grand champion ribbon hangs in the trophy room at Glen Tana. This farm is the home of the grand old gold medal and show ring cow, Eminent Gimps Owl.

The Time to Make Good Hams and Bacon Is at Hand—Page 7

Expansion

A million new subscribers were linked to the Bell System during the past two years—putting into operation a million new routes of talk, and a corresponding increase in all intervening facilities such as switchboards, cable and long distance lines.

No other country is so well equipped as the United States for telephone communication. Yet, because of this—because the telephone is so useful—the demand for service keeps growing greater.

The growth of telephone demand in the United States is greater than the growth of population. It is an intensive growth. An increasing percentage of the population is seeking telephone service.

The Bell System is providing for more investment, further technical achievement, more wires, switchboards and stations—and more subscribers. The American people require the best service. The best service means the most comprehensive service, not only for the necessities of to-day, but for the necessities of the future.

For Good Farming, Attractive Country Homes and Happy Country People

Alkali Is a Menace to Irrigated Farm Lands

By F. J. SIEVERS

Head of the Soils Department, State College of Washington

At a conference of agronomists of the several western states held at Berkeley, Cal., recently the question was asked, "What is the outstanding, fundamentally important problem that confronts western agriculture at the present time?" and without exception the first choice was given to soil alkali as it develops on irrigated land. The question was raised whether irrigation agriculture was permanent, or whether the irrigated regions of this country would suffer the same decline in agriculture and civilization as was experienced in Babylonia and Mesopotamia. These nations, which had developed a very well organized form of government and a very high state of civilization in pre-Christian times, a civilization far in advance of anything then known or recorded in history, evidently lost their wealth, power and standing among the nations of the world with the decline in productiveness of their irrigated land. The rise of alkali is held responsible for this decline.

Western irrigated agriculture is still in its infancy, and if alkali problems are already so much in evidence that they become serious, it is time that the causes for this condition and the practices essential for the reclamation of such lands be fully understood.

Salts Go Up or Down.

Arid soils, because of the fact that they have been formed under conditions of limited rainfall, are well supplied with soluble salts upon some of which we depend for the elements essential to plant growth. Under dry farming conditions where precipitation is limited, the distribution of moisture is such that only a small percentage of these salts go into solution at any one time, and consequently they remain distributed through a large volume of soil where their influence is not injurious, but may serve as an asset to crop development instead. The precipitation is never sufficient to cause leaching and the result is that large quantities of these salts accumulate in the soil. With the application of irrigation water to such soil, a considerable quantity of these soluble salts are brought into solution and are caused to be carried either upward or downward by capillarity and gravity.

Where heavy applications of irrigation water are made regularly much of the water will drain through the soil and carry the salts with it. Soils that are sufficiently coarse to permit rapid percolation rarely present any alkali problem, but, since the souble salts so carried away contain much of the essential plant food, the practice of heavy irrigation tends to deplete soil fertility. It must be borne in mind that a limited amount of alkali in a soil is very desirable, because it is synonymous with available plant food. This is borne out by the fact that soils are most productive just before the alkali becomes so strong that it kills plant life, or at least prevents its development.

Type of Soil Important.

Even if alkali should develop on the coarser or sandy soils, reclamation would be comparatively simple because of the ease with which water could be drained through the soil. In finer textured soils where silt and clay are in evidence in large percentages, soluble salts, if anything, are present even in larger amounts under virgin dry land conditions. These soils will not allow irrigation water to pass through them very readily, and consequently it is rarely, if ever, that the water penetrates sufficiently deep to be carried into the drainage systems. This means that nearly all of the water applied to these soils is either used by the plant or is lost through evaporation.

Irrigation farming in this country is still so new that most irrigation farmers gained their early agricultural experience, if they had any, in the humid sections where crops were dependent on rainfall for their water supply, and it was a fact generally understood that good crops could be obtained on all soils in any season provided there was sufficient moisture available. The primary purpose of tillage was to destroy weeds and to develop the soil mulch so necessary to conserve moisture against evaporation. When these same farmers had an opportunity to obtain irrigation water, and that on soil which in its virgin state presented practically no weed problem, they saw no necessity of continuing this intensive system of tillage. When the soil got dry more irrigation was used, and since this was generally available in large amounts before the projects were fully settled up there was no incentive for its economical use.

Capillarity was unchecked and there was a continuous rise of water from the lower levels in the soil to be evaporated at the surface. This upward movement, although slow, is continuous, thus giving the water an opportunity to remain in close contact with the soil particles for a sufficient period to bring into solution large amounts of the soluble salts previously referred to. Those salts are left behind as a crust on the surface after the water evaporates very much the same as in culinary practices the salts in the water used in a teakettle are left behind as a deposit when the water is driven off as steam. Such salts, although readily soluble, are not easily worked back into the soil because irrigation water is generally applied by the furrow or corrugated method and the water, when so applied, while moving downward, does not come into direct contact with the salts. Besides this, water in its downward progress is not entirely dependent on capillarity and, therefore, can and does pass through the open spaces between the soil particles. The more rapid movement thus made possible permits of a less close contact between the water and soil particles than is essential for the upward passage, which is dependent on capillarity only. The result is that the water when moving upward contains more salt in solution than is present while this water is still on its way downward and, therefore, the general tendency is to cause the salts to accumulate on the surface of the ground.

Cultivate After Irrigation.

The method of prevention of these accumulations is to check capillarity. There is only one practical way and that is through cultivation, with the establishment of the resulting soil mulch. A loose layer of soil so developed to a depth of about three inches, when once fairly dry will serve as a check to the upward progress of irrigation water. It is very necessary, therefore, in the case of intertilled crops and wherever tillage is possible, to cultivate just as soon after irrigation as it is sufficiently dry to make it safe to stir the soil without creating an undesirable physical condition. This cultivation should not be influenced by the necessity of weed control. In fact, the cleaner a field is the more essential is this tillage. Soils that have considerable sand in them are not sufficiently plastic and never get so wet but what they may be cultivated at any time, but where the percentage of clay or slit runs high, considerable care must be exercised not to till unless the moisture conditions are just right, or a puddled soil will result.

Alkali may also develop in soils as a result of seepage water. In many of the irrigated valleys, the land naturally divides itself into benches having different elevations above the stream. The lower lands being naturally closest to the stream are, therefore, as a rule, the first to be irrigated. Later when the higher lying areas are put under irrigation there is a tendency for the water, if applied in excess on these higher elevations, to penetrate deeply into the subsoil and drain underground toward the river. Frequently this water from the higher benches in its underground progress toward the drainage system rises to the surface on the lower benches and carries large deposits of salts with it. These salts in time, due to evaporation effects previously discussed, accumulate in sufficient amount to form a pronounced crust. Before any soil treatment should be undertaken for the reclamation of such lands a proper drainage system should be introduced to cut off this seepage water.

In any case an excessive amount of alkali is detrimental to the growth of most agricultural crops. Black alkali, composed largely of sodium carbonate, which is quite caustic, has a very corrosive effect on plant tissues and even in small amounts has a very injurious effect on crop development. Through the use of sulphur or gypsum, however, it may be readily converted into white alkali, a form in which it is less destructive to vegetation. When soils need correcting for white alkali the problem is not as simple. Here the salts must actually be removed, either by leaching them through the soil by means of repeated heavy applications of irrigation water supplemented by the use of gypsum and an effective underground drainage system, or by actually scraping and flushing the salts off the surface. These reclamation practices are so decidedly expensive that they do not justify consideration except under conditions of most intensive agriculture. It is true that small tracts of white alkali have been controlled, at least temporarily, by incorporating in the soil heavy applications of barnyard manure, but this practice can not be recommended for general use.

All present information available to the reclamation of alkali lands is convincing that the work is not only expensive, but that it is a real man's job that requires more time and perseverance than is possessed by many individuals in most farming communities. The only practical solution of this important problem is to prevent its development by checking evaporation through tillage and by cutting off seepage water by means of effective drainage.

Washington's Record Guernsey

A new world record for senior 4-year-old Guernseys and a Pacific coast record for Guernseys of all ages is held by Edna of Mountain View, the beautiful cow shown in the picture, owned by Wallace & Fordyce of Sunnyside, Wash. In the 365 days ended October 31 she produced 16,153.8 pounds of milk and 933.17 pounds of butterfat. This adds another to the remarkable "ordinary farm" records made by northwest cows, for Edna never had more than 15 pounds of grain per day and during the first eight months of the test was milked only three times daily. She was on pasture, but ran in a dry lot, and was fed an average of about 45 pounds of silage daily for only about six months of the year.

The animal was purchased by her present owners at the 1920 Pacific International Guernsey sale, to which she was consigned by L. G. Perry of Wendell, Idaho, along with several others of the same breeding. Wallace & Fordyce paid the top price of the sale for her and secured also her daughter, Molly of Lavaland, and their present herd sire, Chicona Lover Bold, thereby becoming also heaviest buyers of the day. Upon the foundation which was laid there has since been built the Fawndale farm herd of 35 head, which has been a consistent winner for two seasons all over the northwest show circuit. A. L. Wallace, who has charge of the farm, considers the first money he spent for Guernseys the best he ever spent, and Dr. W. G. Fordyce, his partner, now agrees with him, though the latter at first thought $950 quite a price for a starter.

Edna of Mountain View was sired by Judge of Birchwood and her dam is Golden Hero's Queen Lass, with a record of 714 pounds of fat. Edna has a 2-year-old record of 9463 pounds of milk and 562.4 of fat, but until she was well along on the recent test her owners had no thought of her possessing extraordinary ability. She began the test November 1, 1921, was shown to third place in her class at the Pacific International and was later handled the same as the other test animals in the herd. Her second month, when she produced 87.68 pounds of fat, was her best, and last February, when she produced 71 pounds, was her lowest. In her last month she produced 1257 pounds of milk containing 79.21 pounds of fat, an average of over 40 pounds of milk and two and one-half of fat per day, and in her 10th and 12th months she averaged to produce 80 pounds of fat. At the completion of her eighth month she was put on four times milking, and her monthly production for the last four months of the test average three pounds higher than that for the first eight. The record was completed just before she went to Portland, where it was confirmed, and she took her place in the quartet of four world champion cows, one from each of the leading dairy breeds. She also won fourth place in the aged cow class. During the test, she was fed daily about eight pounds of a prepared milk producer, four pounds of oats and two and one-half to three pounds of bran, the ration being changed from time to time as necessity demanded. She would have eaten twice this amount of grain, her owners stated, but they did not care to force her. She had all the alfalfa hay she would eat, averaging about 20 pounds per day. As an evidence of her remarkable persistence, she produced 2.73 pounds of fat in the 48 hours during which she was en route to the Western Royal Stock show at Spokane. The test was most carefully supervised by state college authorities in charge of official testing. for 28 tests were made by 20 different men, three of them from outside the state. The variation was so sight as to be remarkable.

In addition to the daughter of Edna already mentioned Wallace & Fordyce own another, Fawndale Leading Lady, a yearling, by Chicona Lover Bold, and there is still another living in Oregon, Lady Edna of Lavaland. The new champion is bred again to Chicona Lover Bold, to freshen next spring.

Edna of Mountain View, world champion Guernsey.

Resigns as Farm Bureau Head

An unofficial announcement is made at Yakima that W. B. Armstrong, president of the Washington state farm bureau, will tender his resignation to the board of directors with request that it be accepted at the meeting of the board in Yakima December 7. The announcement does not give his reasons for resigning.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Work for Home Convenience

New equipment is not always required to make home kitchens more convenient and less tiring to work in, as a report to the United States department of agriculture on extension-agent work points out. Much can be done by rearranging the equipment already on hand, such as grouping objects commonly used in the preparation of food, or those used for washing or storing dishes, or articles belonging to the cleaning outfit. In many cases the attention of the housewife is drawn to the need of doing work requiring a good light by a window, or by having a good suspended light at night. One widely adopted improvement is that of giving old floors an easily cleaned surface. A number of simple contrivances can be made at home to lighten the housework, and usually the farmer himself can assist by building shelves, a folding ironing board, dresser, wheel tray and other labor-saving conveniences.

Last year, through demonstrations given by extension workers, over 21,000 families are reported as adopting suggestions regarding home arrangement and management; 7000 kitchens were rearranged, 5000 water systems installed, 3000 washing machines and 4000 steam-pressure cookers purchased, 65,000 homes screened, 4000 septic tanks installed, and 7000 lighting systems placed in farm homes.

We'll Keep the First Mortgage

In his address at Spokane Secretary of Labor Davis said that certain American banking houses have loaned about $5,000,000 or $6,000,000 to European countries. The secretary added that it is quite natural that these bankers want our government to throw off its $11,000,000,000 of assets in order that they may collect their war-time debts in Europe. As matters stand now they have only a second mortgage. "We will give any amount," said Secretary Davis, "to aid the stricken, the hungry, the destitute, but we will not give one cent to keep Europe on a war basis."

Another Better Sires Campaign

George J. Cannon is right. The purebred sire is just as desirable in the production of potatoes as in the production of cattle or hogs. The parent of the potato crop transmits its characteristics to the third and four generation of the offspring just as surely as does the parent of the calf or the pig or the chicken.

Let's clamber onto this pure seed wagon. Why continue to grow scrub potatoes, scrub wheat, scrub radishes and scrub this and that? If we look about we will see that the fellow who is getting the best results in his crops is using good seed. We all want the best, but one of the surest ways not to get it is to plant scrub seed. Figs do not grow on thistles. Neither do good potatoes grow from sick, scrawny, devitalized, nondescript seed.

Deflation of High Freight Rates in the Interior Urgently Needed

Secretary of Commerce Hoover discusses the shortage of railroad cars in his forthcoming report to congress. He says:

"The car shortage also directly affects our farmers, because in every car shortage period a price differential on grains below the Liverpool price (and yet in excess of the railway rates and handling costs) sets in of from 5 to 15 cents per bushel. The losses to live stock growers are very great because of the necessity to feed stock beyond the fattened stages and there are regularly great losses in fruit and vegetables because of the lack of refrigerated cars."

This imparts additional emphasis to the recent decision by the interstate commerce commission in favor of the western wool growers and interior communities. In that case the railroads applied for permission to put in rates that would enable them to take from the ships the transportation of western wool to eastern markets, and further permit them to cut into the business now handled by the ships in the transportation of manufactured and other commodities from Atlantic ports through the Panama canal to Pacific ports.

It seems incredible, but is nevertheless the fact, that the railroads were actually seeking permission from the government to take tonnage away from the ships when the roads are confessedly unable to handle the traffic that already is coming to them.

It is fortunate for our western wool growers and other farm producers, and for the consumers of the broad interior, that the commission forbade the railroads to engage in that wasteful and destructive competition.

The country needs both arms of its transportation service—the railroads and the ships. It needs more efficient service from the railroads. The industries of the Pacific northwest, and the producers and consumers of this region, need increased water service, not diminished. The railroads of this region need more cars and locomotives to pull them, not more tonnage to and at the Pacific coast terminals to increase the congestion from which they are now suffering.

Furthermore, the consumers of the interior have some rights that should be considered. If freight rates are to be lowered anywhere by the railroads they should first be lowered in the interior, where the producers and the consumers have not the benefit of water competition. Fortunately, the ships are giving considerable relief to the producers and consumers west of the Cascade mountains. Ship competition has deflated excessive transportation charges on the Coast. The urgent need now is deflation of high freight rates in the interior.

LOOKING INTO OTHER FARM FIELDS

Switzerland's wheat crop of 1922 is two-thirds of that of last year. The cereal crops as a whole are the poorest in years.

* * *

Strict government control of foods and issuance of wartime food cards is expected momentarily in Germany, according to assistant Commercial Attache Breed, Berlin.

* * *

The Czecho-Slovakia wheat crop is 21 per cent less this year than last, the actual loss being over 8,000,000 bushels; the rye crop is also about 8,000,000 bushels short or 15 per cent less than last year; the barley crop is 10 per cent less. The country, since the war, is gradually going over to a wheat basis, the consumption of wheat increasing while that of rye and corn is declining.

* * *

Utilization of elevator screenings for stock feeding at the Canadian "Head of the Lakes"—Fort William and Port Arthur—has lifted an heretofore discarded by-product to an important factor in Canadian stock raising. During the winter of 1921-22 an experiment was made in using these screenings for sheep feeding, and a sheep rancher brought east a herd of 8000 sheep. After feeding them on screenings throughout the winter, he marketed them with such satisfactory results that his operations during the coming winter will be trebled.

State Farm News

Husking corn is reported as one of the activities on the farms in the lower Yakima valley at present.

* * *

The Washington Growers' Packing corporation of Vancouver, Clarke county, expects to ship 120 carloads of dried prunes this season.

* * *

C. R. Clark of Cashmere is reported to have sold his orchard of six or seven acres to Frank Pollard and his mother, Mrs. F. Pollard, for $8000.

* * *

According to F. Barnard, registrar at the Washington State college, plans are well under way for the erection of two or three group houses. The plans call for three men's houses at a cost of between $20,000 and $30,000.

* * *

A gymnasium and community hall are being built at Usk, adjoining the schoolhouse. It is a one-story building 38x60 feet. The work is being done by volunteer labor. A bell tower and steeple are being built on the Usk church.

* * *

President George H. Black of the Ellensburg state normal school has been appointed on a joint committee to work out a health program for the National Education association and the American Medical association. There are nine on the committee.

* * *

The Wenatchee Big Four Orchard company has obtained a state permit giving it the right to take water from Brook lake, Tule lake, Coffee Pot lake and Long lake, near Stratford, for irrigation. The plans are to reclaim 1000 additional acres of land.

* * *

Charles Brittain of Humptulips, Grays Harbor county, reports harvesting a crop of 16 tons of honey produced by 160 stands of bees. It is mostly from the great fields of fireweed that cover the logged-off land near Humptulips that the bees have gathered this product.

* * *

One thousand beef cattle were driven from Kittitas county through the Ellensburg divide into the Wenas valley, near Yakima, November 23, by a acking concern. This is the largest cattle drive in the valley in 20 years. The animals packed the highway for three miles.

* * *

The advent of wormwood into the farming sections of the Yakima valley is giving some concern. From Naches it is reported to have spread along the road down as far as the main power house, while beyond the power house and toward Yakima there are only isolated clumps of it.

* * *

Word comes from Wenatchee saying that Roy Larson is finishing his work with the bureau of soils in Chelan county. He is planning a series of soil and fertilizer schools for fruit growers in Yakima county. This work will be in cooperation with A. E. Lovett, county agent of Yakima county.

* * *

The apple packing season has ended in the Okanogan district. The Okanogan Growers' union central park warehouse has completed its run of apples and independent growers will have all packed apples delivered in frost-proof warehouses soon. A few growers are holding Winesaps for spring packing.

* * *

The world record pen of White Leghorns that recently completed a year in the western Washington experiment station laying contest at Puyallup was sold by the owner, F. E. Gilbert of Vashon island to Jay Todd of the Queen hatchery, Seattle, for a reported price of $2000. The five birds laid 1421 eggs in 365 days.

* * *

The popular "doddie" has broken into the boys and girls' club column in Kittitas county, where the Congdon & Battles Aberdeen Angus Calf club of 12 members has been organized, with H. W. Roseberg of Cle Elum as leader. County Agent W. L. Davis selected the calves from the herd of J. H. Smithson of Ellensburg.

* * *

The Skagit Poultry association held its annual election of officers in the Mount Vernon Commercial club rooms November 13. It was one of the largest meetings ever held by the association. W. H. North of Burlington was reelected president, William H. Carpenter of Mount Vernon secretary-treasurer and E. W. Walmsley of Pleasant Ridge vice president.

* * *

L. B. Clough, a pioneer prune grower, was elected an honorary life member of the Vancouver Prunarians November 15. He came to Clarke county in 1877, when there were but two prune orchards in the county. Mr. Clough planted the third orchard and built the first drier. He lived here until 1905, when he went to Fairbanks, Alaska. The prune drier was built on what is now the corner of Sixteenth and Main street, near the center of the residence district in Vancouver. Since that time hundreds of driers in all parts of the county have been built and about 6000 acres are now planted to prune orchards.

* * *

The state department of agriculture is fitting up a new display of fruits, vegetables and grains which will soon be on exhibit at the state capitol at Olympia. There will be approximately 50 jars of some of the finest specimens of fruits and vegetables which have been secured from all parts of the state. The grains are being arranged in panels and sheaves as well as artistic designs. There will also be a number of grain varieties in large jars as well as some samples of different soils. There will probably be 100 jars when the exhibit is complete. Mrs. Minnie Wessels of Spokane is arranging the display.

* * *

Mrs. Nina Hubbard Stone of Wide Hollow, in Yakima county, believes that poultry and cream checks materially help out the fruit growing farmers. At least they furnish cash to provide for running expenses while waiting for the apple returns. Mrs. Stone adds: "I know it is a nuisance to have to get up before daylight cold winter mornings to milk—the cream wagon comes around so shockingly early—but my experience, covering a good many years, is that farming isn't easy work at its best. I always did like to work with stock, however, and I don't see how one can have a successful paying property year in and year out without it."

Coming Events of Interest

Dec. 12-13—State farmers' union, Spokane.
Dec. 12-15—State horticultural association, Spokane.
Jan. 3—Northwest Poultry show, Seattle.
Jan. 8—Chelan Poultry show, Wenatchee.
Jan. 22-23—Washington wool growers, Spokane.
Jan. 24-26—National wool growers, Spokane.

FARM BUSINESS AND MARKETS OUTLOOK

Grain prices reached the highest level of the season last week and held the gain fairly well, butter reached the best figures since early in 1921, lambs sold above $15 in Chicago, the wool market was buoyant, hogs had a smart recovery and thus far have held above the money losing level, all finished cattle arriving are showing excellent returns, cotton after a moderate setback started upward again, the hay market began to climb out of the rut and potatoes, which have been in the worst condition of any important farm product this fall, began to show real improvement.

The car shortage is being relieved. The latest statistics, which are for nearly two weeks ago, show a small decline in the number of unfilled orders for cars and a falling off of about 6 per cent in freight car loadings from the peak of the year.

General Business Prospering.

General business and industry are prospering. Steel mills are operating at about 80 per cent of capacity and steel consumption is keeping pace, auto output for November is about the same as in October when a record for the month was attained, building activities are well sustained, and textile mills are using up raw material about as fast as they ever do. In these lines further improvement is not to be expected, but any reaction may be offset by advances in other directions.

Foreign conditions are not worse, apparently, although there is little betterment to record. However, sterling exchange reached a new high level for the year, francs are 13 per cent higher than two weeks ago and Italian lira are near the best level since June.

Proposed government aid to extend the markets for farm products is receiving much attention. Some benefit may be hoped for, although it will be slow in arriving. Facilitation of export trade through extending the powers of the war finance corporation to permit discounting drafts probably on a 90-day basis on sales abroad when indorsed by a reliable foreign importer and the government of the foreign country seems to be the most feasible plan.

Cattle Prices Recover.

The annual exodus of cattle from southwestern pastures was practically over two weeks ago and the movement of western rangers, which severe car shortage in the northwest threatened to prolong, has fallen off unexpectedly in the last few days. Beef consumption is extremely heavy in spite of seasonal competition from other meats so that the lighter run of cattle made possible a recovery of about half of the loss from the season's high point a few weeks ago.

The upturn may revive the courage of weak handed feeders who have been alarmed by the slump in cattle prices and advance in corn and who have been liquidating recently as fast as cars could be had. At best the sailing is not altogether clear for the next 60 days or so, however, since the number of cattle in feedlots constitute a record, and there are many occasional feeders who will relinquish their holdings by midwinter.

Prime steers are extremely scarce, but a big supply of such beef will be available during show week at Chicago. Thereafter, the $13 quotation is apt to be erased.

But little beef has been put in freezers, as holdings of frozen beef on November 1 were only 47,417,000 pounds compared with a five-year average on that date of 141,045,000 pounds. It is reported that a shipment of Argentina beef has been loaded for this country, with more to come if it can be vended profitably.

Demand for feeding cattle has abated, while the supply has been liberal and prices dropped to the lowest of the season. Some are being bought for summer grazing. Good stock cows and heifers are selling at extremely low prices.

Sharp Upturn in Hog Market.

After slumping early last week under the heaviest weekly run at the leading markets since February, 1921, hog prices recovered smartly toward the close when the movement began to abate and buyers for eastern shipment were attracted to the bargain counter. The break was more severe at Chicago than at river markets, due in part to a fire in the hog killing department of the largest packing plant. Prices dropped to a daily average of $7.53 before the market turned.

The November 1 report on storage holdings shows the smallest stock of lard on record on that date and stocks of frozen, pickled and dry salt pork were 12 per cent below the average.

New High in Lamb Market.

Obvious efforts to depress the price of fat lambs have been futile, as the top at Chicago remained slightly under $15 and has finally advanced above that level. Under the circumstances further advances are on the schedule in the next 60 days. Few westerns are coming. Feeders are not quite so eager as they were, although the November movement has held up well.

Horse Market Turns.

The recent buoyant horse market has gone stale again as the holiday season is approaching and buyers are becoming less active, while the most urgent fall demand has been filled. Prices dropped about $10 a head at Chicago on the better grades, while blemished sorts remained a drug on that market.

Wood Trend Abroad Is Upward.

The London wool auction opened last week with merinos quoted 5 per cent lower, fine crossbreds a shade higher and coarse and medium crossbreeds 5 to 10 per cent higher than at the October sale. Australian and South American markets also show strength.

Wheat Remains in Strong Position.

A temporary letup in the demand for wheat caused a relapse in prices early last week, but most of the decline has been regained and the market appears to be in a strong position.

The movement to primaries has not declined in a normal way in the last few weeks, probably due to relief in the car situation, so that receipts are slightly above the average for this time of year, but there is little sign of accumulation. The visible supply at terminals has increased slightly in the last month, but it is the smallest at this season with one exception in 12 years.

Foreign buying was extensive on the recent break, showing that a big latent demand exists. Germany was a heavy buyer in spite of her supposed financial straits and reports were again current of a large German fund in this country for the purchase of foodstuffs. World shipments since the crop year started have not been up to the average expected in view of reduced crops in Europe, which suggests that a larger movement will be necessary later on, at least if foregin finances improve.

Argentina wheat was being offered at low prices until the last few days when the news has been of a different tenor. The surplus from that country may not be so large as generally counted upon. Australia crop prospects have brightened slightly. India is not putting much of her estimated surplus afloat.

West Continues After Corn.

Feeding demand for corn in the west wavers occasionally, but remains broad most of the time with prices above a Chicago basis.

Higher prices for corn are helping the oats market and export sales have increased recently. The excellent demand for poultry feeds together with a small crop is keeping prices of sorghum grains at a high level.

Cash Grain Markets.

The range of cash grain prices for the week ending November 29 was as follows: Chicago—Wheat—No. 2 red, $1.27 3-4@1.28 1-2; No. 2 hard, $1.18@1.21 1-4; No. 3, $1.18@1.20 3-4. Corn—No. 2 mixed, 70 1-2@73 3-4c; No. 3, 70 1-4@73 1-4c; No. 4, 64@72 3-4c; No. 2 yellow, 71 1-4@75c; No. 3, 70 1-4@74c; No. 4, 68 3-4@73 1-4c; No. 2 white, 71@74c; No. 3, 70@73 1-4c. Oats—No. 2 white, 43 3-4@45 3-4c; No. 3, 42 1-4@45c; No. 4, 39@43 1-2c. Rye—85@88 3-4c. Barley—62@74c.

Heavy Clover Seed Movement Is Over.

The movement of clover seed from first hands has been at about the same rate as a year ago and the heavy shipping season is over. Prices are materially higher than last year with seedsmen anxious to buy. Producers now show a disposition to hold.

Chicago, per 100 pounds—Clover, $15@20; timothy, $6@6.75.

Toledo, per bushel—Prime clover, $13.10; prime timothy, $3.40.

Feed Market Unsettled.

The feed market is unsettled with price changes small but advances seem to predominate. Cold weather has caused another spurt in demand, but heavier offerings especially of wheat feeds have largely offset it. Production, particularly of corn feeds, is rather heavy and storage stocks of wheat feeds show a market increase. Stocks of cottonseed cake and meal at mills are light.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $25.75; standard middlings, $26; flour middlings, $28; cottonseed meal, 36 per cent, $49; 43 per cent, $53; hominy feed, $30; gluten feed, $38.35; old process oil meal, $52.50; tankage, $65.

Small Advances in Hay.

Small advances in hay prices occurred last week. Receipts and country loadings are light in spite of an easier car situation and local demand is fairly good.

Prices per ton in carlots—Chicago—No. 1 timothy, $22@24; No. 2, $21@22; No. 3, $15@17; No. 1 light clover, mixed, $21@22; No. 1 clover, mixed, $20@21; No. 1 alfalfa, $25@27; upland prairie, $20@21; midland prairie, $13@15; rye straw, $14@15; oat and wheat straw, $11@14.

Egg Market Breaks and Recovers.

Sudden expansion in receipts of fresh eggs caused a sharp setback in the market early last week, but part of the loss was regained before the close. No sustained increase in the supply is probable for another month, but prices are about as high as they are likely to go.

Receipts of poultry have not yet expanded in proportion to the reported increase in production and with holiday demand at hand, the market has been fairly firm. Producers are said to be holding back because of dissatisfaction with prices which may mean a flooded market later in the winter.

Another Advance in Butter.

Current receipts of butter at the leading markets in the last three weeks have dropped to the lowest level in a year. Although the market is encountering more opposition right along, it advanced into new high ground with gains ranging from 2 to 3 cents per pound. Production is decreasing as shown by reports to the American Creamery Butter Manufacturers' association and the decline in receipts of about 25 per cent compared with three weeks ago has more than offset the falling off in consumptive demand.

Prices on 92-score fresh butter on November 29 were: Chicago, 54 1-2c; New York, 53 1-2c; Boston, 52c; Philadelphia, 53 1-2c.

Cheese Market Higher.

Advances in country cheese markets were promptly followed by upturns at distributing points with both buyers and sellers showing confidence in values.

Prices on No. 1 American cheese on November 29 were:

Chicago—Twins, 26@26 1-2c; S. Daisies, 27@27 1-2c; D. Daisies, 27@27 1-2c; Young Americas, 27c; Longhorns, 26 1-2@27 1-2c; Square Prints, 27 1-2c.

Fruits and Vegetables.

Although shipments of potatoes from producing sections have fallen off sharply in the last four weeks, arrivals at the principal consuming markets continue heavy, although there has been a moderate falling off in the last 10 days. Winter weather has set in in the principal potato sections and some shipments in boxcars are being damaged. Stored potatoes are not apt to be sold until prices work higher. Some recovery in values seems probable in the next 60 days. Idaho sacked rurals sold at $1.10 per 100 pounds sacked in Chicago and 35 cents f. o. b. shipping points.

Barreled apple sections are shipping less freely while boxed apple sections are increasing. The total movement of all kinds for the season to November 27 are 68,276 cars compared with 66,478 cars to the same date last year. Northwestern extra fancy Jonathans, large to medium, are quoted at $2 to $2.25 per box in Chicago.

PULLMAN, Wash., Dec. 2.—Red, 98c; white, $1.01.

(Continued on page twenty.)

A Brood Sow on Every Farm

Northwestern Markets Ship in Hogs and Hog Products

By C. M. HUBBARD, Live Stock Extension Specialist, State College.

The markets of Spokane, Seattle, Tacoma and Portland purchased $5,900,000 worth of corn belt and California hogs in 1921; in 1922 they slaughtered $6,800,000 worth of hogs from these two sections.

Let us look a little closer into the situation and see where the state of Washington stands. According to the 1920 census, Washington had an average of less than one brood sow to the farm, about two-thirds of a brood sow, to be exact. Yakima had three-quarters of a brood sow per farm; Kittitas county had a little less; Lewis and Skagit counties had less than half a sow and Whitman about one a third brood sows per farm.

Were the farmers to carry one brood sow for each of the farms in the state and should they save five pigs to the litter, one-third of the swine shortage would be relieved and our farmers have the opportunity to pocket around $2,000,000 or more which this year went, in the main, to Iowa, Nebraska and Dakota farmers.

Again, in the main, these hogs could be developed on feeds allowed to go to waste. In Adams county brood sows are likely to become too fat for breeding purposes through picking up waste wheat in the fields. There is an enormous amount of waste grain in the Palouse section, much of which might be used in swine production.

In several parts of the West Side an abundance of skim milk obtains. Windfall and cull apples may be utilized in the fruit sections.

Alfalfa pasture, together with a 2 or 3 per cent (two or three pounds of grain per 100 pounds of pig) concentrate ration, makes a reasonably cheap means of growing pork in the irrigated districts.

As the total amount of pork produced in 1622 falls below that of 1921 the question is, how serious will the situation be in 1923? Surely our Washington farmers should look more closely into this serious situation. Let our motto be "A broodsow for every farm in Washington."

Potato and Corn Show

"A brood sow on every farm" was the slogan proposed by C. M. Hubbard, live stock specialist of the Washington State college, in stressing the need for more hogs and other live stock on the farms, at the corn and potato show at Toppenish

The annual "big potato" banquet, given by the Toppenish Commercial club was a great success, there being over 300 in attendance.

The first prize on commercial potatoes went to S. B. Mustard, Powell Butte, Ore., while the first prize for seed potatoes went to T. C. Newington of Clarksfork, Idaho. In the corn display H. C. Davis of Granger took first prize on Yellow Dent corn in the 10-ear lot and in the bushel lot. In the White Dent corn competition T. L. Madaris of Parker made the great sweep on all first prizes.

Other winners in potatoes were: A. E. Skidmore, Colville; R. E. Morris, Granger; Keith Morris, Granger; E. F. Whitaker, Yakima; and in corn, W. F. Nass, Outlook; G. P. Gregg & Son, Mabton; J. F. Schriner, Yakima; C. C. Lang, Toppenish, R. B. Lewis, Yakima; E. H. Burlinger, Buena; Elmer B. Davis, Granger, George Moore, Yakima, and Alex. Sloop, Parker.

A large attendance of farmers crowded the exhibition hall and discussed the merits of the various samples and listened to lectures by specialists from the Washington State college.

May Curtail Chelan County Investigations

By E. H. M'PHERSON.

Both growers and shippers of the Wenatchee district are up in arms against the proposed abolition of the investigational work on the part of the county, the state and the government in this district. In the first place the county commissioners have cut the appropriation for the county soils bureau, which has been conducted for the last four years by Roy Larsen. This is the only bureau of the kind in the country, so far as is known, working along exactly these lines. While Mr. Larsen states that he has practically finished the course of investigation which he started, yet there are other lines of work which should be taken up in the opinion of many horticulturists and pomologists here.

Next came the resignation of County Agent William Meikle, who has served for the last five years. No appropriation has been made to maintain this department for another year.

And the work of the district horticultural inspector has been handicapped, it is charged, by the refusal of the commissioners to allow the expenses incurred during the last saeson.

The authorities have also threatened to abolish the work which has been carried on here for the last four years by United States Pathologist D. F. Fisher in this territory, due to lack of federal appropriation. Mr. Fisher has made valuable discoveries in connection with the San Jose scale, the red spider and the powdery mildew, as well as apple scald. His discovery of the value of lime and sulphur to eliminate the mildew, also his experimnets in connection with oiled paper wraps have been of great benefit to the industry. No appropriation is provided for the continuance of this work by the bill passed by congress at the last session, and his work may be discontinued unless an extraordinary effort is made to secure means for maintaining it.

The Chelan county farm bureau, the Pomona grange and the Wenatchee Valley Traffic association, as well as the Wenatchee Commercial club, have all gone on record as favoring the continuance of some of the above activities. However, the belief is general that some of the county bureaus might be consolidated and conducted more effectively.

Cooperation Saves Money

A saving of $2465 on a total business of $9437 done in cooperative handling of hay, feed and seed through the Thurston county market project leaders and the extension service, was effected in the past year, according to the annual report of County Agent E. B. Stookey. A committee of market project leaders has charge of this business; orders are turned in to the extension office, and when a sufficient number have accumulated they are turned over to the local merchant who handles the business. The secretary of the committee, L. L. Snow of Route 2, Olympia, has taken practically the entire responsibility.

Powder buying in continuation of last year's program, was handled in the same way, and while farmers are doing less clearing this year than last, due to general conditions, powder orders totaled 23,750 pounds, on which the saving is conservatively estimated at $1232. Nearly twice this amount of powder was used last year. Superphosphate in the amount of two cars, containing 35 tons, was bought cooperatively, formation of the pool being assisted by the county agent. Bids were awarded by the marketing committee.

Assistance was given the Northern Pacific cooperative berry growers in forming three locals in Thurston county, and the statistical report shows that one local, the one at Olympia, did a business of $13,468. It is probable that total berry business in the county amounted to two and one-half times that amount.

Cars Come Almost Too Late

Almost too late to be of any service, the railroads are now (December 1) rushing refrigerator cars toward the Wenatchee district, though few of them have arrived as yet, according to THE FARMER'S Wenatchee correspondent. Shipments to date are less than 7000 cars, compared with 11,000 on December 1 last year. There are at least 3000 more cars of apples that should be in the eastern markets or in eastern storage now. Whether weather conditions will permit the continuance of shipments any longer is doubtful. The fear is entertained that hundreds of refrigerator cars will arrive here too late to be loaded with safety and will have to be returned empty.

A further obstacle prevents the movement of apples by the Pacific Fruit Express cars, of which about 30 are arriving here daily for the first time. These must be turned back to the Union Pacific system by the Great Northern at Spokane, and under present rulings these can not be stored in transit this side of Chicago. All other cars have this privilege and unless the interstate commerce commission granted the same right to the Union Pacific on these cars they will be of little use to local shippers who hope to load them to points on the Union Pacific, such as Omaha, St. Louis, Kansas City and other stations further south, but east of Chicago.

Wintering Bees

J. W. Ware, a veteran beekeeper of Puyallup, finds that very little trouble will be had in carrying bees through the winter if all hives are full and have plenty of honey and feed. This, he says, is the best solution of the wintering problem for western Washington, even in case of packing the hives to keep out the dampness. It is also necessary to have a good strong queen in each colony.

A novel system of hive records is used by Mr. Ware. He keeps a small card tacked to each hive and marks down the result of each hive examination. A system of abbreviations is used, such as "I" for a new Italian queen, "Q" for brood queen, "E" for eggs laid in brood cells, etc. By such a system very little time is necessary to mark down the records, and when the next examination is made one knows exactly what condition the hive was in when previously opened.

Big Conventions Next Week

Two important farm conventions will be held in Spokane next week. The annual convention of the Washington and North Idaho Farmers' union will meet December 12 and 13. In addition to the regular business of the organization National President Charles S. Barrett will deliver an address.

The annual convention of the Washington State Horticultural association will be held December 12 to 15, inclusive. This convention will include also the annual grade and pack conference and the Northwest Fruit Growers' conference. An elaborate program has been arranged, including papers on subjects of production and distribution by the leading horticultural authorities of the Pacific northwest and several from other sections and from the United States department of agriculture.

Endorse Columbia Basin Project

Upon recommendation of A. D. Cross of Spokane and A. A. Elmore, formerly of Spokane, the national convention of the farmers' union at Lunchburg, Va., went on record as favoring the development of the proposed Columbia basin project.

Auto Men Wanted!

Everywhere in California auto men are wanted. Trained mechanics, chauffeurs, battery experts, machine shop foremen, garage managers; all draw big pay. Learn the business quickly and easily in our big training shops. No previous experience necessary. Any man, of any age can learn. Tools and equipment FREE. Work guaranteed to earn room and board while learning. Only expense is for low tuition. Write for FREE 72-page illustrated book of facts. Explains everything.

Hog Butchering Time Will Soon Be Here

By G. J. KOHLER

Choice ham and breakfast bacon can be produced by the farmer for much less than he can buy them; still he buys more and more meat each year.

Some farmers haven't the time, others haven't the patience, and still others haven't the hogs; yet there are some farmers in every community that are passing up a good thing. Country cured hams, bacons and sausage, when properly produced, bring fancier prices and find a readier market than packing house products.

The most profitable hogs to butcher are those about 7 to 10 months of age. They should be healthy, in medium condition and gaining rapidly. If the hog is too fat the meat will not marble well and there is a noticeable loss of flavor.

Hung high for cooling.

When preparhogs for slaughter they should remain unfed for about 24 hours before being killed. Plenty of clean, fresh water will help clear the system of food and will facilitate bleeding. Do not whip or excite hogs before killing because it is sure to result in bruised or improperly bled meat.

After sticking, the hog should be allowed to bleed well. While the animal is bleeding the water temperature in the scalding vat should be brought as near 160 degrees as is possible. Scald and scrape the rear end of the hog first. In case the water temperature is not right it is easier to remove the hair from the hindquarters. In case the hair sticks in places when scraping, cover the spots with a gunnysack and pour hot water on it. A couple of buckets of cold water will wash the carcass after scraping and help to make it firmer.

The entrails should be removed immediately and the inside of the carcass thoroughly washed with cold water. It is better to take out the leaf lard before the carcass is cool. This lessens the danger of the hams and loins spoiling by allowing more rapid cooling. Splitting the carcass along the center of the spine also aids chilling.

A pork carcass should never be cut up until it is cooled. If the butchering is done in the summer, refrigeration must be resorted to. The best temperatures for refrigeration range between 34 and 40 degrees.

Freshly killed meat absorbs odors readily; consequently it is best to hang the carcass in the open air if possible.

The head is cut off about an inch back of the ears. If the cut doesn't happen to strike the atlas joint, twist the head and it will give. The fattest part of the head can be used for lard and the fleshy parts for headcheese or sausage.

Cut off the front feet about an inch above the knee and the hind feet about the same distance above the hock. The feet are usually pickled or jellied. Shoulders should be cut between the fourth and fifth ribs; the latter and the strip of backbone jointed onto them are cut loose from the shoulder.

The ham is removed from the middle by cutting just back of the rise in the backbone. Cut from the flank to the root of the tail at an angle of about 45 degrees. This saves the loin meat which would otherwise be trimmed off and used for sausage.

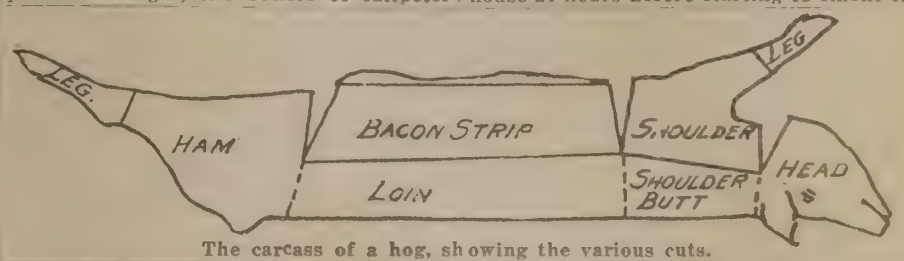
Remove the ribs from the side, cutting as close to them as possible. Cut the loin and fatback off in one piece by cutting parellel with the back just below the tenderloin muscle on the rear part of the middle. Trim the fat from the loin and leave the latter intact. The rest of the middle is squared up for bacon.

The meaty trimmings from all cuts should be saved to make sausage. All fat except that around the intestines should be rendered for lard. The intesinal, or gut fat, as it is more commonly termed, should be soaked in cold water for a while to remove the odor. It can be rendered by itself later. The other fat strips are cut into fine pieces and put into a large kettle with about a quart of water. A moderate fire and frequent stirrings will keep it from burning. When the cracklings become brown and float the lard [illegible] the lard when it is removed from the fire. Stirring it and make it smooth. [illegible] helps to whiten

Some people complain of their lard getting rancid when they start to use it. If the lard is removed from the container evenly, and not by digging down into the center and leaving a thin coat exposed to the air on the edges of the container, it is less likely to became rancid.

Twenty-four to 36 hours after killing is the proper time to start curing. The meat should be thoroughly cooled but not frozen.

Salt when applied alone to meat causes the juices to dry out and the fibers to become tough. Sugar and molasses soften the fibers and improve the flavor. Saltpeter is used to preserve the natural color of meat. It is less work to preserve meat with a brine and there is less danger from rodents and insects than with the dry cure method.



Dry Cure Method.

There are many dry cure methods. Possibly the most common is the use of salt alone, though it is not the most satisfactory. Salt tends to harden the meat fiber and dry the pieces out. One method quoted in a department of agricultural bulletin is the use of five pounds of salt, two pounds of brown sugar and two ounces of saltpeter. This is mixed thoroughly before applying to the meat. After the meat is well cooled rub the mixture of salt, sugar and saltpeter well into it. Let it stand in a cool, dark place for three days. Take out and apply a second coating of the mixture. Let stand for three days again. Treat it once more and pack away for about 10 days. Then remove and pack away into a barrel or box which has about an inch of salt on the bottom. Lay the hams skin side down on this salt, with the shoulders next and the sides next. The meat may remain in this condition for two to four weeks, when it is ready for smoking. Prior to smoking it may be covered with a well rubbed on mixture of black pepper and borax, this latter treatment being to repel insects that may attack it.

A good brine formula is as follows: Eight pounds of salt, two and a half pounds of sugar, two ounces of saltpeter and four gallons of water to every 100 pounds of pork. Allow four days' cure for each pound of weight in a ham or shoulder and three days for each pound in bacon and small pieces. For instances, a 15-pound ham would take 60 days and a 10-pound side of bacon 30 days. It is best to make the brine the day before you use it, so that cooling will be complete. When mixing, place all the ingredients together and boil until they are thoroughly mixed.

When the meat is being placed in the brine put the hams in the bottom, skin side down, shoulders next, and bacon and small pieces on top, skin side up. Change the bottom pieces to the top in five days and again in 10 to 18 days. In case the brine becomes ropy, either reboil it or make a new one. Always wash the meat when changing it from a ropy brine to a clean one.

When the meat has finished curing wash it in tepid water and then dry each piece. Carelessness causes much waste in hanging meat in the smokehouse. Each piece should be hung so that it will not touch any other. The meat will mold and sweat if it comes in contact with anything. Permit the meat to hang in the smokehouse 24 hours before starting to smoke it.

The carcass of a hog, showing the various cuts.

Green hickory or maple wood is the best fuel for smoking meat. Hard woods are always preferable to soft. A bad flavor results from using resinous woods. Smoke with a slow fire and don't get the smokehouse too warm. Forty-eight hours is sufficient smoking if the meat is not to be kept very long.

After the meat is smoked it should be wrapped in heavy paper and placed in muslin sacks. The opening of these sacks should be twisted several times and tied shut tightly, so as to keep out insects and rodents. Painting the sacks with a solution called yellow wash keeps mice and flies and other meat destroyers away.

EVEREADY FLASHLIGHTS & BATTERIES

Two Beef Bulls Bring $2100 Each

Five beef cattle sales, besides the two dairy cattle sales, made the fullest week the Pacific International has ever had, in the way of live stock auctions. But it showed that this great show has a mission as a distributing point for live stock, as well as an educative value for those who visit it. While the averages were low, a few high prices were received and those who sold expressed themselves as, under the circumstances, fairly well satisfied.

THE SHORTHORN SALE.

While the bulk of the consignments to the Shorthorn sale at the Pacific International Stock show went low, the sale was characterized by one bull going to the high figure of $2100 and another to $1225. Other bulls sold at fair figures and the average was decidedly higher than for the females, that had no exceptionally high individual to boost the average. It was the Sni-a-Bar farm of Kansas City, Mo., that paid the high price. This farm was instituted by the late W. R. Nelson for the demonstration of improvement of cattle, and it is certainly a tribute to the northwest and to the Day & Rothrock company that a bull from their herd should be one of those selected and so high a price paid. The bull selected was Hercules Conqueror, junior and grand champion of the show. Hercules Ideal, the $1225 bull, was taken by Mountcrest ranch of Hilt, Cal., indicating the high reputation these northwest Shorthorns have. Broughton Brothers of Dayton, Wash., were the runners up on both bulls. The 22 bulls averaged $327.50 each and the 25 females, $168.40, the 47 head averaging $240.87. Colonel A. W. Thompson of Indiana was on the block, with Sandy Keith in the ring, and the sale was under the management of E. A. Lawson, field representative of the American Shorthorn association. The following is a complete list of the animals sold, buyers and prices:

Bulls.

Consigned by Day & Rothrock, Sprague, Wash.:
Hercules Conqueror, born March 10, 1921—Sold to Sni-a-Bar Farm, Kansas City, Mo. $2100
Hercules Ideal, born November 30, 1921—Mountcrest Ranch, Hilt, Cal. $1225
Hercules Radiance, born September 29, 1921—Napier & Wills, Sprague, Wash. $640
Hercules Bandmaster, born October 10, 1921—Methow Valley Live Stock company, Winthrop, Wash. $305
Hercules Statesman, born October 15, 1921—F. P. Mays, Tygh Valley, Ore. $250
Consigned by A. D. Dunn, Wapato, Wash.:
Dunbre Lad, born December 4, 1921—Felzer Bros. & Davidson, Tangent, Ore. $180
White Clipper, born March 1, 1921—Sauter Bros., McMinnville, Ore. $175
Consigned by George Bertrand, Castle Rock, Wash.:
Criterion 2d, born February 23, 1921—O. M. Plummer, Portland, Ore. $150
Criterion 3d, born October 20, 1921—Edson L. Faulke, Gazelle, Cal. $100
Consigned by Oregon Agricultural College, Corvallis, Ore.:
Grande Diamond, born October 24, 1921—B. C. Diamond, White Salmon, Wash. $135
Roan Prince, born November 21, 1921—Edson L. Faulke $125
White Diamond, born November 21, 1921—Edson L. Faulke $95
Consigned by State College of Washington, Pullman, Wash.:
Hercules Rex, born November 2, 1920—F. L. Pope, Merrill, Ore. $325
Village Cup, born September 21, 1921—L. L. Jones, Mitchell, Ore. $200
Consigned by Foothills Farm, Inc., Carlton, Ore.:
Clover Meadow Victor, born January 12, 1920—Broughton Bros., Dayton, Wash. $200
Cloverleaf Choice, born September 20, 1921—L. R. Vincent, Chesaw, Wash. $280
Consigned by John H. Mathison, Wapato, Wash.:
White Forest, born January 15, 1921—Edson L. Faulke $115
Monellas, born January 4, 1922—Edson L. Faulke $100
Consigned by A. H. Tarbell, Warren, Ore.:
White Cup, born September 27, 1917—Rimbol Young, Sumpter, Ore. $150
Consigned by H. R. Richards & Son, The Dalles, Ore.:
Nellie's Master, born June 26, 1921—Albert Campbell, New Meadows, Idaho $140
Consigned by J. W. Fox, Cedonia, Wash.:
Captain, born March 26, 1918—Edson L. Faulke $130
Consigned by G. W. DeLay, Sublimity, Ore.:
Village Baron, born January 5, 1921—Edson L. Faulke $85

Females.

Consigned by Day & Rothrock:
Hercules Victoria 4th, born March 1, 1921—Broughton Bros. $750
Hercules Violet 6th, born October 26, 192.—University of Idaho, Moscow, Idaho $275
Hercules Missie 4th, born September 29, 1921—Joe McDonald & Sons, Fenn, Idaho ..$260
Consigned by A. D. Dunn:
Bonnie Girl, born February 7, 1921—Gale DeLay, Hot Lake, Ore. $250
Dunbro Violet, born October 7, 1921—Broughton Bros. $210
White Lady, born October 4, 1921—Rimbol Young $110
Consigned by George Bertrand:
Bessie Criterion, born September 2, 1921—Harold Holmes, Mabton, Wash. $140
Red Velveteen, born September 10, 1920—Rimbol Young $125
Daisy Criterion, born February 7, 1921—Rimbol Young $95
Consigned by Oregon Agricultural College:
Lady Silverdale, born November 27, 1921—Day & Rothrock $75
Miss Willow Dale 2d, born December 11, 1921—S. C. Gibson, Dakota, Wash. $65
Miss Willow, born December 3, 1921—Gerald Varnum, Mabton, Wash. $75
Dainty Lady 2d, born December 7, 1921—Harold Holmes $95
Consigned by Foothills Farm, Inc.:
Craigalea Coral, born September 3, 1921—Harold Holmes $225
Red Rose B, born May 15, 1921—Gerald Varnum $180
Consigned by A. H. Tarbell:
Red Queen, born January 26, 1921—Rimbol Young $75
Consigned by R. E. Tarbell, Warren, Ore.:
Roseanna, born May 28, 1921—Rimbol Young $70
Consigned by J. W. Fox Jr., Cedonia, Wash.:
Cedonia Belle, born April 3, 1916—John Mathison, Wapato, Wash. $100
Consigned by G. W. DeLay:
Village Maid, born February 2, 1921—Day & Rothrock $195
Village Queen 2d, born May 22, 1921—Rimbol Young $75
Village Mary, born November 15, 1921—Rimbol Young $65
Lady Clay, born November 15, 1921—H. A. Espee, Oysterville, Wash. $65
Consigned by Mountcrest Ranch, Hilt, Cal.:
Victor's Magnolia, born September 15, 1921—Harold Holmes $150
Consigned by Tomson Bros., Dover, Kan.:
Marigold Baroness, born October 8, 1916—Broughton Bros. $625
Consigned by Frank Brown, Carlton, Ore.:
Unnamed heifer, born January 2, 1922—John Mathison $60

HEREFORD CONSIGNMENT SALE.

On Friday, November 10, the annual consignment sale of Herefords was held. Henry Thiessen, who had a sale of his own earlier in the week, and who had two consignments to this sale, was induced to offer his grand champion bull, Rupert's Model 14th. He was rewarded by topping the sale and equalling the high price of $2100, which was the top price of the Shorthorn sale earlier in the week. This great bull was taken by the Alamo Ranch company of Gazelle, Cal. W. D. Duke himself was present from the ranch and was the successful bidder after some hot competitive bidding. Outside of this bull prices ranged low, the average for the 30 bulls being $218.83 and for the females, $119.10. The following is a complete list of animals sold, buyers and prices:

Bulls.

Consigned by Henry Thiessen, Sweet Water, Idaho:
Rupert's Model 14th, born September 10, 1919—Sold to Alamo Ranch company, Gazelle, Cal. $2100
King Rex, born September 8, 1921—H. A. Ten Eyck, Sandy, Ore. $130
Ideal Bonnie, born January 5, 1922—Walter Gover, Halfway, Ore. $105
Consigned by Baldwin Sheep company, Hay Creek, Ore.:
Oregon 24th, born December 6, 1921—C. E. Burgess, Fossil, Ore. $475
Chesney Lad 70th, born March 17, 1918—Alamo Ranch Co. $350
Oregon 3d, born February 20, 1920—Alamo Ranch company $200
Oregon 22d, born January 28, 1921—C. E. Bodine, North Portland, Ore. $130
Consigned by Herbert Chandler, Baker, Ore.:
Prince Debonair, born April 3, 1921—Weatherford Bros., Dayton, Wash. $310
Rupert Debonair, born June 25, 1921—Joe Boyer, The Dalles, Ore. $195
Prince Claude, born October 8, 1921—Preston Ranch company, Jacksonville, Cal. ..$170
Peaceful Prince, born January 3, 1922—George W. Bull, Mabton, Wash. $130
Consigned by Weatherford Bros., Dayton, Wash.:
Don Blanchard 12th, born July 22, 1921—Albert Campbell, New Meadows, Idaho $180
Consigned by A. H. Barnum, Moro, Ore.:
Y Beau Carlos 19th, born April 29, 1921—C. E. Burgess $175
Carlos Donald, born April 20, 1921—Edson L. Foulke, Gazelle, Cal. $145
Consigned by W. G. Hayworth, Corvallis, Ore.:
Happy Fairfax, born February 12, 1919—Edson L. Foulke $145
Monta Fairfax, born July 15, 1921—O. D. Teel, Echo, Ore. $115
March On Fairfax, born July 27, 1921—Edson L. Foulke $105
Waveland Fairfax, born January 20, 1922—Edson L. Foulke $75
Consigned by Herman Nordby, Lewiston, Idaho:
Dan Rupert 7th, born November 12, 1921—Diamond B. Ranch, Lowell, Ore. $250
Blanchard, born May 5, 1917—Edson L. Foulke $105
Dan Rupert 5th, born September 27, 1921—Edson L. Foulke $80
Consigned by Oregon Agricultural College, Corvallis, Ore.:
Beau Debonaire 2d, born November 8, 1921—Walter Gover $85
Beau Rupert, born October 24, 1921—Walter Gover $80
Silky Beau 7th, born October 11, 1921—Walter Gover $80
Consigned by Platt Bros., Genesee, Idaho:
Beau Type 7th, born April 14, 1921—Edson L. Foulke $105
Beau Type 4th, born April 12, 1921—Edson L. Foulke $100
Beau Type 11th, born August 1, 1921—Walter Gover $100
Beau Type, born January 11, 1921—Albert Campbell $90
Beau Type 14th, born September 16, 1921—Edson L. Foulke $80

Make money orders payable to J. B. Robinson. Be sure you give correct sizes. Prices listed above are prepaid to your own town.

Skagit Dairymen Celebrate

Now Own and Operate Plants to Handle All Their Milk

There were at least 2500 people at the Jubilee meeting of the Skagit County Dairymen's association at the association's plant at Burlington November 18. The dairymen invited all farmers and any one else interested in the upbuilding of the dairy industry to come out and enjoy a program which included talks by prominent dairymen, a number of vaudeville acts and a dance. The occasion was the first pay day after the purchase of the federal condensery at Mount Vernon October 1.

Everything was free to all and the large room on the main floor of the building was crowded to capacity. A stage was constructed at one end to accommodate the speakers. J. M. Humphreys, manager of the plant, was the master of ceremonies, who called on W. J. Knutzen of Mount Vernon to make the address of welcome. Pete Omdahl, a breeder of registered Holsteins and a member of the board of directors, told of the rapid development of the dairy industry in the state and warned the breeders not to sell off too many of their best cows to buyers of other states who are anxious to secure the best. "We should make every attempt to develop our own industry first," he said, "before we begin to stock up the herds in our neighboring states with our best blood lines."

Protected by Own Plants.

J. A. Scollard, president of the United Dairy association, outlined the growth of the association in the county and spoke optimistically of the future. He estifated at least 15,000 dairy cows in Skagit county and said there was no reason why the number could not be doubled to the betterment of all agricultural conditions. The question of marketing their product has been solved, due to the close cooperation of the members.

"The fact that the association now owns two large plants eliminates any prospect of the association's not being able to produce any of the products demanded by the market," said Mr. Scollard. "If there is an especially strong demand for cheese and the canned milk market is low, the entire production of whole milk in the county could be turned to the Burlington plant with very little trouble. The reverse could be done in case there was an unusually strong demand for condensed milk, since the plant at Mount Vernon is equipped to handle 150,000 pounds of raw milk per day."

In order to make the purchase, which required a total of $250,000, the members of the association found it necessary to raise $70,000 by the sale of bonds and borrow $120,000 at 7 per cent for five years. Of this amount $60,000 was purchased by farmers and business men of other cities, while the balance of $10,000 went to the local business men of Mount Vernon.

The Federal condensery, together with the association's plant at Burlington, makes one of the largest cooperative manufacturing units in the United States, it is claimed. The plants will have a combined valuation of more than $600,000 and will have a capacity of 350,000 pounds of milk per day.

For the last two years the association has been operating the Federal plant under an option for which they paid $20,000. The earnings of the plant during this period met all expectations and were made possible by a steady supply of the proper volume of milk for the most efficient operation of the condensery.

The association agreed to furnish milk to the plant for the entire period and was to be allowed the use of all brands of milk being manufactured. During this time the organization earned for its members more than $75,000 after paying all expenses plus a profit to the Federal company.

Part of the bonds were sold at a meeting of enthusiastic citizens one evening while the members were contemplating the purchase of the plant. Mr. Scollard was present at many of their meetings.

The method of distribution of the products of the plants is through a central agency which was organized for the special purpose of handling the output. This concern is known as the Consolidated Dairy Products company, and plans to handle only cooperative dairy products.

The history of the association dates back to December, 1916, when the organization plans were completed. It was their purpose to do a general brokerage, factory, commission, forwarding and export business in all kinds of dairy products. The nonprofit cooperative method was to be followed. The plan met with the approval of a large number of dairymen and the organization was completed.

Membership is limited to those who are actually engaged in the dairy business and the corporate powers are vested in a board of five trustees, each of whom must be a stockholder in good standing. A bond issue of $300,000 was floated for the erection of a new building, which was to be large enough to take care of all of the dairymen's milk. The association did not begin to manufacture condensed milk until 1920.

Since the Federal plant has been added to the equipment of the association the members are well fitted to take care fo all of their milk and will also allow for some expansion of membership.

Want Farm Bureau Secretary

The Whitman county farm bureau proposes to have an executive secretary all its own. That was the unanimous decision reached at a meeting of the county farm bureau in Colfax. In other words, President E. J. Doneen was authorized to employ a secretary without financial help from the county or the Washington State college. It is understood that G. S. Burford of Waterville will be the man selected. The new bureau secretary will assume his duties December 1, when the contract with County Agent C. A. Lodge will expire.

Canyon county, in southern Idaho, is employing an executive secretary on the same terms, the farm bureau members entirely financing him.

A number of counties in Washington employ a "secretary" in addition to the county agent, the former acting as a business agent for the bureau.

An important announcement was made at this meeting of the Whitman county farm bureau when President Doneen stated that through the reduction in warehouse handling charges from $1.25 to $1 a ton, the result of work by the bureau, farmers of Whitman county had been saved between $400,000 and $500,000 in the last two years. Figures were presented showing that the saving to members in the purchase of sacks, sack and bundle twine, struchnine and alfalfa seed the last year amounted to $13,775.

Canning Club Champions

Gladys Taylor and Ruth Haydeen of South Bay, Thurston county, state canning club champions of 1921 and runners up for the interstate championship, will go to the Pacific Fruit exposition, November 11 to 19, to give demonstrations of the cold pack method of canning.

The girls, who are students in the Olympia high school, were successively county, district and state canning champions last year and are familiar with every process of canning. They have been five years in club work and on their rapid rise to the championships they won were trained under direction of William H. Dunham, Thurston county club leader.

Poultrymen to Meet

Harry H. Collier, director of the American Poultry association, has issued a call for the members of the American Poultry association of Washington, Oregon, Idaho, Montana, Wyoming, North and South Dakota to meet at Seattle January 4 to 6, 1913, to organize a zone of the American Poultry association. Headquarters of convention, New Richmond hotel.

The Washington State Poultry Breeders will meet at Seattle. Headquarters, New Richmond hotel, January 5, 1923.

The Puget Sound Poultry association will hold its annual show January 3 to 7, 1913, when $240 and the gold and silver medals wil be given in premiums for American Poultry association members who show their fowls.

IN THE LEADING POTATO STATE.

Maine used to be content to grow potatoes and trust to luck to market them. Now they are forming a cooperative potato marketing association.

A Brighter Christmas on the Farm With DELCO-LIGHT

Bring greater happiness into the lives of everybody on the farm by making a Delco-Light Electric Light and Power Plant your family Christmas present.

There isn't anything that would give greater pleasure and comfort. There isn't anything that would so lighten the daily burdens and make every day on the farm happier. And just think how the family will enjoy the cozy rooms flooded with bright, clear, and steady Delco-Light.

Remember, too, Delco-Light will bring a happiness that extends far beyond Christmas day, for Delco-Light will be constantly on hand to provide brilliant, safe light, running water wherever you need it, power to run the separator and tumble the churn, and help in so many other ways.

And the new big price reduction and the time payment plan make it easy for you to get Delco-Light *now*—to place your order *today* to insure delivery in time for Christmas.

Put Delco-Light *in your Home* for Christmas

DELCO-LIGHT COMPANY, DAYTON, OHIO
Subsidiary of General Motors Corporation
Also manufacturers of Delco-Light Water Systems, Delco-Light Washing Machine, and Frigidaire, the Electric Refrigerator.
All products made for 32 and 110 volt Direct or Alternating Current Service

MODERN APPLIANCE CO.
508 First Ave., South Seattle, Wash.

LIVESTOCK AND DAIRY

Dairy Farm Survey

"There are two classes of dairy farms, one on which the herds pay less than the regular wage for labor put on them and the other which returns a better wage to the owner because of better breeding, selection, feeding, management, and more favorable market conditions." This is a conclusion following a survey of a number of dairy farms in western Washington made by R. N. Miller, farm management specialist of the state college extension service.

"On farms where there is a large family, a low labor return is frequently marketed at such a figure as to materially increase the family income," said Mr. Miller. "In such a case each member who helps with the dairy work is working at a lower figure than outside help would cost, but it is doubtful if such labor could be more profitably employed.

"Some herds are returning little more than the value of the manure, while on the other hand there are farmers clearing good money, even in a bad year like this one. In the survey, one farm where there were 27 cows sold butterfat at 50 cents per pound in August, 1922, reported 15 hours' daily labor and allowed 6 per cent interest on money invested, depreciation on herd, buildings, equipment, death risk, taxes, supplies, insurance, feed, pasture and management, allowed 75 cents per cow for manure produced, made 61 cents per hour. By having an exceptional market this farmer was able to make a good profit. The cost per pound of butterfat was 29 cents.

"Another dairyman in the same locality had only an ordinary herd, but made 25 cents an hour with no preferred market. Still another with an exceptional market of 40 cents per pound made 65 cents per hour, while a fourth made only 8 cents per hour.

"Any dairyman who receives the greater part of his income from a dairy herd can well afford to keep feed, production and other records, and to make such estimates as will enable him to determine what he is receiving for the labor in taking care of the cows.

"The number of hours will vary from 100 to as high as 300 per animal during the year. Convenience of buildings, fields, and how well a person can do the work, are among the things that influence the number of hours of labor and the earnings per hour. The most immediate point, of course, is a higher price for the products. That is the easiest to think and wish for, but hardest to get.

"Next in importance is a greater milk yield from each cow. This factor is a more difficult problem and requires more time, but it pays well when once established. A third point and one liable to be overlooked, is greater home conveniences making for easier and better work and the use of more and cheaper home-grown feeds.

"Our records show that even in a trying year like 1922 some dairymen are at least breaking even; some do it by acquiring a better market and selling a superior product. Some by using better cows, cheaper feeds and requiring cheap labor. The feed costs on the lot in the survey amounted to 47 per cent of all costs of producing milk, while labor amounted to 24 per cent of the total cost."

Mr. Miller is carrying on other experiments of this kind and hopes to have figures that will give the dairymen a better idea as to how they may work toward a better net income from their herds.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

SWINE DISEASES. ARTICLE III.

Tuberculosis.

We hear a great deal about tuberculosis in cattle and a great deal of work has been done to eradicate this disease from the dairy herds, but have you heard anything about this same diseases in swine? Not a great deal has been written about it in this animal, though it is very prevalent. Probably the reason that we hear more about tuberculosis in cattle, and especially the dairy herds, is because the food products from this source is usually eaten in the raw state. Milk, butter, cheese and ice cream may easily be contaminated when the milk is drawn from dairy herds that are diseased, but since we cook the meat food products quite enough to destroy the germs there is actually less danger from the meat than the milk, and the further fact that the children use milk so universally is another reason for guarding it more closely than other food products.

There is too general an opinion that one can tell by the appearance of the animal when tuberculosis is present. This is one of the hardest opinions to overcome. An owner proudly says, "Aren't my animals in fine condition?" meaning that they are sleek and fat and looking well to the eye. That does not mean, however, that they are free from certain contagious diseases. He could assure you very certainly that they were not suffering from hog cholera or certain other acute diseases, but he can not have the assurance that they do not have tuberculosis.

Requires Physical Test.

We do not recognize tuberculosis in the human family until the patient begins to show signs of loss of weight, paleness and a certain listlessness, after which it may be suspected, but not certainly diagnosed. I do not mean that your physician can not diagnose it before that time, but that nothing less than a careful physical examination would reveal it. The same is true of the swine. By the time they begin to show visible symptoms of a wasting disease we might suspect tuberculosis and until that time think that they were in perfect health, and all this time they are spreaders of the disease. All animals affected do not die of tuberculosis. In fact, a small percentage only show visible symptoms, as most of them recover even without treatment, but because there is danger of spreading this disease to other animals and to human beings there is good reason for regarding it as an ailment to be fought by every possible means at our disposal.

How Discover It?

One may ask, "If this disease can not be readily diagnosed how is the breeder to know when it is present?" This is answered that when these animals are sent for slaughter it is easily recognized on postmortem examination and that is the time that the careful owner will take heed when he finds that any of his animals are diseased. I have in mind one herd of hogs that showed 65 per cent diseased on the killing floor and the owner claimed to be unaware that he had any such trouble on his place. This is not a hear-say story from Lapland, either, as these animals were shipped to a Portland

(Continued on page fifteen.)

Prove it —this way

Don't take anyone's word for it that KOW-KARE definitely increases the milk yield. Actual proof is too easy to secure.

Make a simple test — and make it now, so that you may benefit all winter and spring by what it proves. Select a part of your herd — even one cow — and place in her feed morning and evening, for just one week out of the month, a tablespoonful of KOW-KARE. If you keep accurate production records, you will be surprised at the increased yield, and at the surprisingly low cost of the treatment.

The reason is simple. The vigor of the cow's digestive and milk-making organs "runs down" during the winter months when green pasturage is not available. KOW KARE has the medicinal properties to keep these organs toned up and working at summer capacity.

It is just this building-up of the genital and digestive functions that makes KOW KARE so valuable in treating the diseases which originate in these very organs, such as *Abortion, Retained Afterbirth, Barrenness, Scours, Bunches, Milk Fever,* etc. No medicine shelf is complete without this nationally-used cow remedy.

KOW KARE is sold by feed dealers, druggists, general stores; large size $1.25; medium size 65c. If your dealer is not supplied, we will send postpaid. Our valuable book, "*The Home Cow Doctor*," free.

WE USE THE DE LAVAL Cream Separator

86% of the Exhibitors at the 1922 National Dairy Show

held at Minneapolis, October 7-14, use De Laval Cream Separators. These exhibitors of purebred dairy cattle are the cream of the world's best dairymen—they know the best separator and use it.

Butter made from De Laval separated cream also won first place in *every class* at the annual convention of the National Creamery Buttermakers Association, held in connection with the Dairy Show. This makes the twenty-sixth time that De Laval-made butter has won first place since 1892. The world's best buttermakers use and recommend the De Laval.

In order to determine the oldest De Laval Separators still in service, we will give a prize of

$25 to the Owner of the Oldest DE LAVAL in Each State

Simply write to your nearest De Laval office, giving the date you purchased the machine, length of service, size, serial number, and a statement regarding the service you have received from it.

Prize winners in each state will be announced in due course.

De Laval Pacific Company
61 Beale Street San Francisco

Sooner or later you will use a De Laval Cream Separator and Milker

$7.50 = After 30 Days Free Trial

The Belgian Melotte Separator — with the wonderful Self-Balancing Bowl. No other like it.

30 days' free trial—then, if satisfied, only $7.50 and a few easy payments — AND — the wonderful Belgian Melotte Separator is *YOURS.*

No Money Down!

Catalog tells all—*write.*

Caution! U. S. Bulletin 201 shows that vibration of the bowl causes *cream waste!* The Melotte bowl is *self-balancing.* Positively cannot get out of balance therefore cannot vibrate, Can't remix cream with milk. *The Melotte has won 26 Grand and International Prizes.*

Catalog FREE

Holsteins and Jerseys Are Sold

Rather low prices, wide distribution of the cattle sold, and heavy buying by the Oregon State hospital at Salem, which thereby laid the foundation of a purebred dairy herd, were features of the 10th annual sale of Holsteins on Friday of Pacific International week at Portland this year. Buyers from the four northwest states of Washington, Oregon, Idaho and Montana participated, Oregon taking the greatest number, naturally, and in addition John B. Irwin of Minneapolis, Minn., one of the foremost eastern breeders, paid John L. Smith of Spokane the compliment of taking home three of his heifers. The average price received for 66 head of all ages and both sexes was $191.55.

Not only was the state hospital the heaviest buyer (its 14 purchases totaling $3655), but it picked some of the finest offerings of the sale, including the highest priced and second highest priced females. Jewel Cornucopia Wayne Boon, a 4-year-old consigned by Thomas Yarr of Chimacum, Wash., with calf by Cascade Korndyke Ormsby Blossom, topped the sale at $500. A 3-year-old bred by Smith but consigned by William McKeown of Gresham, Ore., brought $410 on the bid of the state hospital, which purchased also three others at $300 or better and seven others from $180 to $275. R. B. Goodin of the state board of control signed the sale slips for the hospital. There were no other heavy buyers, though R. H. Tuttle of Walla Walla took five head at $695, sales being distributed among 38 buyers. W. O. Bohart, Brown Swiss breeder of Bozeman, Mont., and Mrs. Minnie Miller, Guernsey breeder of Wendell, Idaho, both exhibitors at the Pacific International, were among the purchasers.

John L. Smith was the heaviest consignor, with 15 head, most of them his own breeding, and three of those sold by William McKeown were bred by the Spokane man also. The youngest consignor was David Nisbet of Chehalis, whose Olympic Greenbank Queen started the 1922 season by winning at the Southwest Washington fair, went through to second place in the club classes at Portland and was sold for $305 to T. J. Owens of Kirkland, Wash.

POULTRY AND RABBITS

The Storrs Contest

By H. W. Baldwin.

Hollywood farm, Hollywood, Wash., won first place with a pen of White Leghorns in the 11th annual egg laying contest recently completed at the Connecticut Agricultural college at Storrs. These birds laid a total of 2218 eggs, or an average of more than 221 eggs for each of the 10 birds in the pen. This is the first time since 1914 that a pen of Leghorns has finished in the lead. Unlike the winners in some contests, this pen lagged behind for a large part of the year, but steady laying in the fall months and a strong spurt during the last three weeks made this the high yen among all contestants. During the last three years the 30 birds entered by Hollywood farm have laid an average of 218 eggs per hen, an enviable record for consistently good laying.

A Barred Plymouth Rock, one of a pen entered by the Ontario Agricultural college at Guelph, Ontario, Canada, was a feature in the contest. During the 52 weeks of the competition she laid 301 eggs, giving her the distinction of being the top bird in the entire contest and the second 300-egg bird ever produced at Connecticut. Frank P. Matteson of Davisville, R. I., won second place with a pen of White Wyandottes. They laid 2167 eggs, or an average of 216 each. The winning pen of Leghorns beat these Wyandottes by only 51 eggs. Third place goes to another breed, a pen of Barred Rocks from Westhampton Beach, L. I., entered by Harry G. Culver. Their record is 2124 eggs.

Until this year the White Leghorns, White Wyandottes and Barred Rocks were tied for first place in the number of contests won, as each had won three out of the 10. This year"s win gives the Leghorns the lead. As in previous contests, there were 100 pens of 10 birds each. These 1000 birds represented three countries and 13 states. Classified by breeds there were 400 White Leghorns, 240 Rhode Island Reds, 160 Barred Rocks, 100 White Wyandottes, 80 White Rocks and 20 Columbian Rocks. Comparing production by classes we find the following:

400 White Leghorns 165.7
240 Rhode Island Reds 156.8
100 White Wyandottes 168.4
260 Plymouth Rocks 162.0

The total production of all birds in the contest was 162,880 eggs, giving each bird an average of over 162 eggs. This is the second best average made in a contest at Connecticut, the highest being 163.4 made in 1916-1917. More than 1,500,000 eggs been laid by the contest birds in the 11 years the contest has been running.

Among the White Leghorns hen No. 672, owned by Hollywood farm, was the highest producer, her record being 277 eggs. C. H. Lane of Southboro, Mass., is the owner of hen No. 599, whose record of 250 eggs places her at the head of the Rhode Island Reds in the contest. In the White Wyandotte class Walter Bradbury of Tottingham, England, entered the high-producing bird. Her record is 277 eggs. Barred Rock hen No. 28, the 300-egg hen, owned by the Ontario Agricultural college, is the top bird in both the Plymouth Rock class and the entire contest.

The contest for 1922-1923 started November 1, with more applications received than could be cared for. A new feature is the use of lights in the pens, this being the first time that lights have been used in any contest. Six new states are represented among the total of 18 states and three counties that have started the 12th annual competition.

Poultry Problems

By W. D. BUCHANAN, Extension Poultry Specialist, Washington State College.

Kindly advise me whether or not bread scraps are good for laying hens or pullets. And if not, why not? G. D.
Arlington, Wash.

Bread scraps are good chicken feed if free from mildew and mold. Whole wheat bread would be better than white bread, because it is richer in protein. But bread alone is not a balanced ration.

MAKE THEM SING.

My 6-months-old pullets are well developed and look well, but they lay only a few eggs, then try to sit. We have no vermin in our coops. We are feeding wheat and cracked corn of equal proportions and egg producer and separator clabbered milk. What will make them lay? W. E. P.
Chehalis, Wash.

Feed your pullets in a clean, deep litter, feeding one-third of the grain for breakfast and two-thirds for afternoon meal. Feed last grain feed at 3:30, giving them all they will eat. Feed green feed after grain, not before. Keep plenty of mash in hopper. Keep birds busy and singing. If they won't sing, give them a piece of pumpkin to start them off. Anything that they like will turn the trick. This should be done in the forenoon.

HOW TO FATTEN TURKEYS.

Will you tell me how to fatten turkeys? What to feed, how much, and do we have to keep them shut up? How long does it take to fatten them? MRS. C. D. S.
Battle Ground, Wash.

Turkeys are usually fattened by beginning with a light feed of wheat, changing this over gradually to corn, and then increase the corn gradually till they are having all they will eat. It is wise, at the same time, to limit their range somewhat. The fattening process should begin about a month before the birds are to be marketed.

HOW TELL THE GANDER?

Please explain how I can tell the difference between a male and a female goose. WM. W.
Bothell, Wash.

The gander is somewhat larger and coarser than the goose, the neck is longer and the head larger. In common geese the gander is slightly lighter in color. Also in mature stock the abdomen of the goose is deeper, almost touching the ground. These differences, however, are so slight as to require very close observation.

TO CULL PULLETS.

Will you tell me the correct way to cull pullets. I have 130, some of which were hatched in April and some in May and June. At what age is it best to determine whether they will make good layers or not? MRS. E. B. S.
Retsil, Wash.

It is difficult to cull pullets if three ages are running together, unless they are marked. Cull out birds that fail to mature in six months. Also take out all long-beaked, loosely-feathered, pale-shanked, knockkneed and sickly birds, especially if they are thin on breast bone. It is not safe to go much beyond this in culling pullets.

POULTRY IN THE ORCHARD.

H. M. Melson of Tieton Drive reports success in keeping poultry in connection with orcharding. This year he says the poultry will bring him more clear money than his orchard. He reports over 500 pullets now in full laying and giving him 75 per cent production.

Free—Conkey's Poultry Book
180 pages chock full of information about the feeding and rearing of chicks, culling of hens, etc. Tells how to keep chickens healthy and how to make them pay. Whether a beginner or a professional, Conkey's Book is worth dollars to you. Sent for 6 cents in stamps to pay postage.

Get Winter Eggs!
See to it that there is song and cackle, scratch and action, going on in your poultry yard.
That's when the eggs come.
Feed
Dr. Hess Poultry
PAN-A-CE-A
See them get busy. It gives hens pep.
Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.
Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.
No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.
A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.
Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.
GUARANTEED

Don't Hatch Weak and Wobbly Chicks
With Cheap Incubators
A cheap uncertain incubator means death to chickens and profits. Remember it is not how many you hatch that counts, but how many you raise.
Queen Incubators
Hatch Strong, Healthy Chicks That Live and Grow
One of our Minnesota dealers writes: "We have sold Queen Incubators and Brooders for the last six years and they have given our customers entire satisfaction. The farmers all consider the Queen Incubator as standard and at auction sales, where it is almost impossible to get a bid of any kind on the average second hand incubator, the Queen always brings a good price, regardless of its outside appearance."
A Queen costs but little more than the cheap machine and the extra chicks that live and grow soon pay the difference. Write for Free Book.

SIZES: 70-Egg to 1,000 Egg (56)
QUEEN INCUBATOR CO., LINCOLN NEBRASKA
Queen incubators are distributed by:
The Queen Hatcheries, 4th ave. and Pine St., Seattle, Wash.

ORCHARD AND GARDEN

Orchard Problems

By O. M. MORRIS.

When is the best time to transplant currant and gooseberry bushes? My rhubarb plants wilt and die. The leaves turn yellow. They are in good rich soil and have plenty of water, but not too much.
Kennewick, Wash. J. V. B. M'C.

Gooseberry and currant bushes can be transplanted in your locality any time during the winter or from the time the leaves drop in the fall or before the growth starts in the spring. Best results will probably be obtained by very early spring or late winter planting.

It would require a careful examination of your plants to determine the cause of their death. If you have been using large quantities of manure around the plants it is possible that the plants are being injured by grub worms, which normally live and develop in manure piles or in the soil around manure piles. These insects, however, do not confine their feeding habits in decayed vegetation, but feed on the roots of live plants which they happen to find.

If you would dig up one or two of your plants and carefully examine the root system, you would be able to find the cause of your trouble. If you can not, you could send the plant to the college, where it could be examined by the plant pathologit or the entomologist, and the exact cause of its trouble determined.

Storage of Apples.

I am about to store 700 to 800 boxes of fine apples in cold storage. The cold storage is one for fish (barrelled fish), the only one available. The boxes would be in storage about three months, perhaps longer. Would the apples be tainted with the odor from the fish? Would the presence of ammonia be detrimental to the apples? The storage capacity has one room only, with an air shaft. The other rooms have none, but air can be pumped into the rooms. Would the air pumped into the rooms have an evil effect on the apples?
Kalama, Wash. B. B. B.

Apples absorb odors in storage and if there is a noticeable fish smell about your cold storage rooms it will be noticeable in all probability in your apples if they have been stored there after as much as one or two months. If there is a noticeable ammonia odor in the rooms it will probably result in causing small brownish or blackish specks to appear on the fruits. These will usually be centered around the little cordy dots on the fruits which are the breathing pores. If there is no odor of the fish or ammonia the room will be safe. A slight amount of ventilation is good for fruit storage and will tend to prevent scald. A slight circulation caused by pumping or ventilation drafts tends to equalize your storage conditions and will be good for your fruit rather than harmful. An absolutely dead air is almost sure to result in surface scald appearing on some of the fruits at the Jonathan, Rome Beauty, Monmoth, Black Twig or Arkansas Black. Some other varieties do not scald quite so easily.

HOW KEEP CIDER SWEET?

Could you send me some information as to the best way of preparing cider. Could you tell me how to keep cider sweet for a length of time without spoiling the flavor?
Stevenson, Wash. D. M. N.

There is no satisfactory method of cheaply preparing cider to keep it sweet without modifying slightly the taste of it. It can be preserved by putting in small quantity of benzoate of soda. However, this is not ordinarily recommended from the health point of view. The process of pasteurizing or sterilizing, by heating to the temperature of 160 degrees Fahrenheit for one-half hour, will practically always modify the taste, and, while it does not require a very elaborate equipment, it does require special equipment for satisfactory work.

United States farmers' bulletin 1264 gives the most complete and satisfactory discussion for handling this material. A copy can be obtained from the United States department of agriculture, or by writing to the member of congress from your district.

Transferring Bees

"We often hear the question, what is a box hive? Since it is prohibited by law, it is well that every beekeeper know exactly what is meant by this term," remarked A. B. Slocum, bee specialist of the state college extension service. "Any hive from which the frames can not be removed is a box hive.

"In transferring a colony from a box hive to a frame hive the 21-day method is often used. Place the old brood, or box hive, containing the colonies and their honey supply, beneath a new hive and close the whole entrance, thus causing them to go into the new hive in order to get out. Place a queen excluder between the two hive bodies, and the bees will transfer their brood in the 21 days' time, after which the old hive can be removed.

"Transferring can be done much quicker by means of smoke, by placing the two entrances together and smoking the old hive for 20 minutes."

Cranberries Harvested

"Cranberries make a good crop to market at a time when there is no other crop to sell," replied Fred Neal of Olympia, when asked by a representative of THE FARMER how his small patch compared with the proceeds from the other garden crops. "There were only 25 barrels this year, which is slightly below what the patch should produce, the late spring frosts having an influence on the vines and preventing them from getting an early start.

"This year we were fortunate by getting a mild fall, which permitted us to get all the picking done before any frost occurred to injure the crop. We had abundance of water and could have flooded the patch if it had been necessary. There were few weeds to come through the layer of sand and the summer was ideal for the growth of a good crop of fruit.

"The picking was all done by hand and it took three weeks to get the entire crop out of the field. We had eight pickers who had done this kind of work before. As for getting them to market, we have been selling them all for the local trade and they do not require any special kind of package. Some who have ordered a large quantity will take them in barrels, while others will be sold in boxes. If the crop was to be sold for a more distant market it would be necessary to use a standard crate to ship them in."

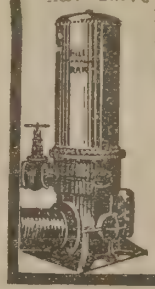
Mr. Neal is operating a market garden on the 40 acres that is known as the Redpath farm, two miles east of Olympia. There are about 15 acres of cultivated land on the place and Mr. Neal expects to erect a small greenhouse for growing cabbage and tomato plants.

WAR ON ORCHARD MOUSE.

Of 273 orchards in the Yakima valley, with a total of 7032 acres, there was a loss of 4664 trees last winter because of girdling by orchard mice, according to a report just sent out by the federal bureau of biological survey. Leo K. Couch, inspector in charge of rodent control, has prepared the report, based on a questionnaire, which has also been sent into the Chelan, Kittitas, Okanogan and Benton districts.

THE NORTH SLOPE ORCHARD.

Orchards facing to the north are likely to bloom a little later than those facing the south, and are correspondingly less liable to injury from late spring frost.



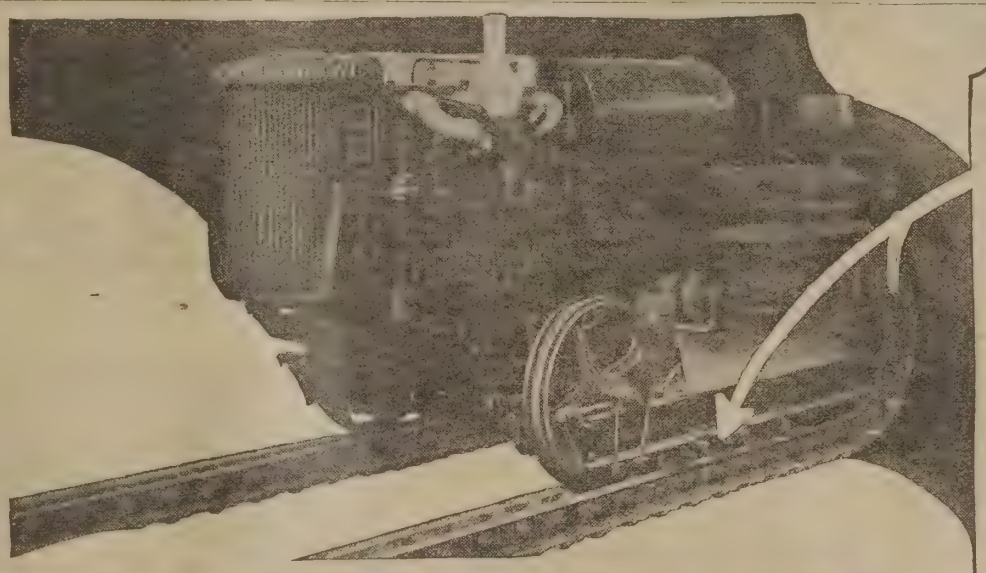
Irrigate!

Without pumping expense with the powerful and efficient

Hill Hydraulic Rams

Built in twelve sizes, 1 inch to 24 inches, to fit ordinary requirements, pumping a few hundred gallons of water per day for home use or millions of gallons per day for irrigation.

If you have running water and can get some head or fall for power, one of these machines may solve your pumping problem. Ask our engineers.



Write for free catalog. R-1, home supply size; R-2 for irrigation.

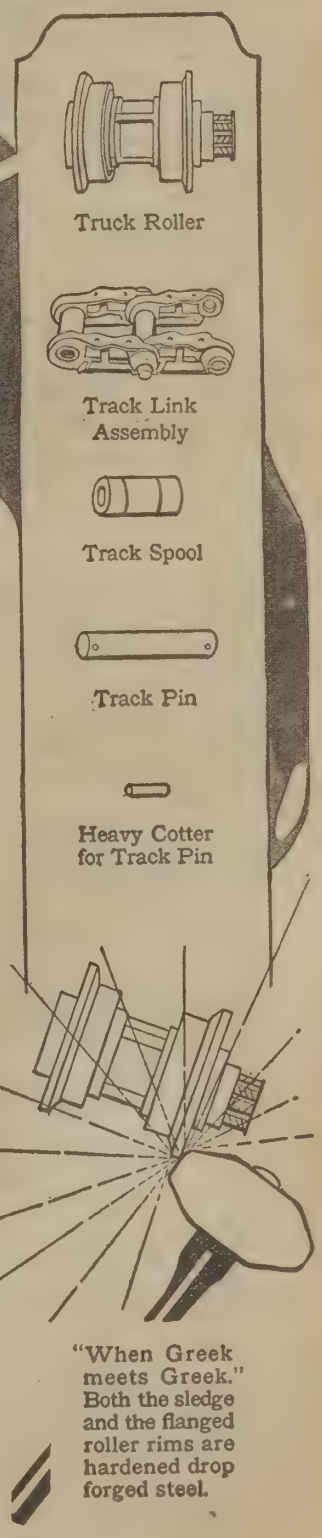
TRUCK ROLLERS that LAST!



THE DRIVING WHEELS of the most powerful locomotives have forged steel rims.

The Truck Rollers of a track type tractor support the weight of the tractor and the flanges of rollers must withstand severe jars and side strains of side hill work and rough going.

On Best Tractors the flanged rims of truck rollers are drop forgings—nothing less—forged into shape under heavy steam hammers, from heated steel of special analysis. After being forged the rims are annealed, bored and reamed, then turned true on the outside tread. They are next shrunk on accurately machined hubs—being hardened at the same time—hardened to resist battering blows just as are the heads of first-class forged hammers or sledges.

The rollers, complete, are mounted on anti-friction bearings to insure easy running, bearings with seals to retain lubricant and to prevent entrance of sand and ruinous grit.

The truck rollers of Best Tractors run over tracks which are true and straight. Tracks are made from drop forged hardened links which have been accurately machined top and bottom and large hardened spools and pins at each joint contribute to the long life which may be expected from the tracks on Best Tractors.

"When Greek meets Greek." Both the sledge and the flanged roller rims are hardened drop forged steel.

Holsteins and Jerseys Are Sold

(Continued from page eleven.)

land, $300; John L. Spofford Matador, b. Feb. 13, 1922, H. W. Cooley, Jefferson, Ore., $120.

Consigned by Smith—Hazelwood Stella Champion, b. Jan. 21, 1922, J. G. Foster, The Dalles, Ore., $235; Hazelwood Sir Bessie Segis, b. March 3, 1922, H. V. Franklin, Portland, $235; Hazelwood Hello Homestead, b. March 30, 1922, R. C. McCroskey, Garfield, Wash., $215.

Consigned by Chamberlain—Valdessa Homestead of Cerealia, b. Sept. 3, 1921, E. M. Maxwell, Newberg, Ore., $105.

THE JERSEY SALE.

With the top price $805 and with most of the animals going at fair values, the Jersey sale must be called a success, though the breeding and conformation of several individuals warranted more than was received. But, taken as a whole, the sale was a success. The beautiful 2-year-old, Ethel May's Surprise, consigned by C. F. Bates of Salem, Ore., is the one referred to that brought the high figure. She is not only a beautiful cow, but is on official test and making a good record. She was taken by J. S. H. Matson of Victoria, B. C., who bid in four head for a total of $1360. Although the prices on the others were low, all are show stock.

Karl Hanneman of Corbett, Ore., secured the grand old cow, Gwendola Rosaire, for $625. While she is almost 10 years old, she is the highest record daughter of Rosaire's Olga Lad and looks good for some years yet. Firwood Poppy, a daughter of Mr. Sorensen's herd sire, with production backing and a sweet individuality, went for $550. Mr. and Mrs. Johnson of Birkenfeld, Ore., were the buyers. Firwood Rosaire, a March calf out of Gwendola Rosaire, brought $500 on a mail bid from Dr. E. S. Ellensen of Chippewa Falls, Wis.

David Spencer, Ltd., of Vancouver, B. C., took Mr. Bates' St. Mawes Golden Beauty at $510, and some good prices were received by every exhibitor. Messrs. Matson, Spencer and Dunville, all of British Columbia, were buyers and helped the sale, paying good prices for what they got. E. A. Rhoten and C. D. Minton were sale managers and Colonel Hughes was on the block, with Colonel Ben Sudtell in the ring.

Females.

Consigned by N. C. Sorensen, Chehalis, Wash.: Gwendola Rosaire, born May 6, 1912—Karl Hanneman, Corbett, Ore. $625
Firwood Poppy, born May 3, 1920—Mr. and Mrs. J. F. Johnson, Berkenfeld, Ore. $550
Firwood Rosaire, born March 22, 1922—Dr. E. E. Ellenson, Chippewa Falls, Wis. $500

Oct. 18, 1921, Herb Sharp, Orin, Wash., $100; Raleigh's Hope of S. B., b. July 23, 1920, T. Cunningham, $90.

Consigned by Karl Hannemann, Corbett, Ore.—Luckiamute's Fancy, b. Dec. 11, 1913, J. N. Wishon, Portland, Ore., $300.

Consigned by Lewis E. Judson, Salem, Ore.—April King's Pauline, b. March 16, 1921, A. E. Dumville, Sardis, B. C., $225; St. Mawes Pogis Violet, b. Dec. 14, 1920, W. T. Putnam Jr., $175; April King's Buttercup, b. March 23, 1921, J. S. Matson, $160; April King's Ruth, b. March 16, 1921, J. S. H. Matson, $160.

The only bull of the sale, Firwood Rosaires St. Mawes, consigned by Sorenson, Chehalis, Wash., sold for $355.

How to Ship a Fur Bundle

One should not put furs for shipping into a sack that is full of holes; neither tie up the end of a good sack and think you have made a secure bundle, for you have really done just the reverse—you have simply invited some dishonest fellow to help himself to your furs and if he accepts the invitation there is no one to blame but yourself. Remember that a great many different people handle your shipments before they reach the market and if you want people to keep their fingers out of your furs you should make your bundles secure. All bundles of furs (except those sent by parcel post) should be sewed up tight. Parcel post shipments should be properly tied, but do not sew up, as that prevents inspection of contents by the postoffice department.

Mark them plainly with the address of the concern to which you ship them. A request to any fur house will bring you not only advice on how to trap fur bearers, but will bring a supply of tags and shipping instructions as well.

BUY BOOTS AS YOU WOULD TIRES

When you buy tires you're governed by the mileage you can expect. Buy rubber boots the same way. Wear per dollar counts.

Gold Seal boots will outwear ordinary boots. They are crack proof. We use a special process in applying and vulcanizing pure virgin rubber, and fabric. Our red soled "Manure" boot is made to resist the acids and the alkalies of the farm.

This is the one Gold Seal label—it's round and gold colored.

Good stores in the northwest sell Gold Seal boots, and Gold Seal oiled clothing. Look for our label.

We are the original and only
Goodyear Rubber Co.
Portland and San Francisco.

No connection with any other firm using the name "Goodyear."

Goodyear GOLD SEAL BOOTS

Authorized since the 70's to use the name of Charles Goodyear, inventor of vulcanizing.

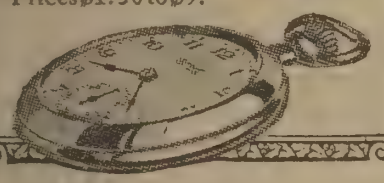
Look for it in Store Windows

THERE'S no gift like a watch, nothing used so much, consulted so often, carried so long.

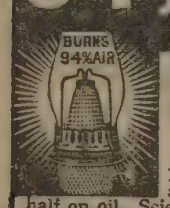
The Ingersoll you give now will be ticking Christmas Greetings next July—next September, and so on through the years to come.



Your dealer can show you Ingersolls to fit every purse and purpose. Sizes for men, women, boys and girls. Radiolite dials that tell time in the dark. Jeweled models in nickel and gold-filled cases.

Prices $1.50 to $9.

INGERSOLL YANKEE $1.50



INGERSOLL WATERBURY $4.00

NEW KEROSENE LIGHT BURNS

94% AIR

Beats Gas or Electricity

TEN DAYS' FREE TRIAL

Over 3,000,000 Satisfied Users

Make your home bright and cheerful, saving one-half on oil. Scientific tests prove this wonderful new Aladdin five times as efficient as the best round wick open flame lamps. Sixty candle power pure white light for 50 hours on a gallon of common kerosene. No odor, smoke, noise or pumping up. Won't explode. Guaranteed. Prove to yourself by free trial that Aladdin has no equal as a white light. If not satisfied return at our expense.

Get Yours Free We want one user in each locality to whom customers can be referred. In that way you may get your own without cost. Be the fortunate one to write first for 10 day free trial offer and learn how to get one free.

$1,000 REWARD Will be given to anyone showing us an oil lamp equal to this Aladdin in every way. (Full details of offer given in circular.)

Agents Wanted To demonstrate the Aladdin in territory where oil lamps are used. Experience or capital unnecessary. Many agents average five lamps a day and make $500 a month. Write quick for territory and samples.

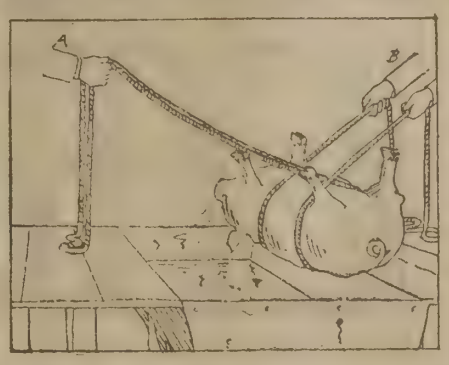
packing house from an Inland Empire town. This condition is at home, here, now and it is our problem to fight.

I would recommend that when a large percentage become affected the entire herd be slaughtered under government supervision and the premises be thoroughly cleaned and all litter burned and then hogs kept away for several months while heat and light and sunshine disinfect the premises, after which hogs may again be kept in the same quarters. If only a few are diseased and the rest are particularly valuable for breeding purposes one should have a veterinarian run the tuberculin test on the entire herd to detect the diseased ones and these should be slaughtered at once.

Test Several Times.

The healthy ones should be removed to clean new quarters until the old ones are thoroughly cleansed and disinfected. Then another test should be run to pick out any more animals that might have contracted the disease and by repeating this performance a few times a herd and premises can be rendered quite clean again. When, however, tuberculosis has existed on a farm in any species of animals all animals on that farm should be watched closely to detect any evidence in other species. The swine, cattle and the chickens are the most susceptible and should be watched closest.



Of course when tuberculosis exists in a few animals on a place there is danger of others getting it, but there is greatest danger when the animals are kept closely confined in small quarters and for that reason it is best to give all animals plenty of room, so any contagious disease will not spread so fast. It is usually not economical to crowd the living quarters of animals.

Hog Butchering Time

(Continued from page seven.)

Yellow wash is composed of: Three pounds of barium sulphate, one ounce of glue, about an ounce of chrome yellow and half a pound of flour. Half fill a pail with water and mix the flour in it. Dissolve the chome yellow in a separate quart of water and add it and the glue to the flour solution. Bring it to a boil and add the barium sulphate slowly, stirring it constantly.

Country sausage always finds a ready market and a good price. It can be made of scraps and trimmings, making its cost to the producer comparatively low. To about 85 or 90 pounds of pork trimmings add 15 pounds of beef. It may be seasoned

Two men can handle a large hog with ease by the method shown here. One stands on each side of the scalding vat with the hog in the rope as shown. As one slowly relaxes his hold the other slowly rolls the carcass into the vat. In like manner it is rolled over and over in the water to insure an even scald. When ready to take out, one man crosses over and lays his ends of the rope down on the platform. The men stand on them as each pulls on one of the other ropes, thus rolling the hog out of the water and up onto the platform for scraping.

as follows: One and a half pounds of salt, one ounce of red pepper, four ounces of black pepper, one ounce of mace and one ounce of sweet marjoram. Cut the meat into small pieces and sprinkle the seasoning over it. Then grind it up and pack it in earthern jars, placing them in a cool place for about 24 hours before it is stuffed into the casings. This allows the seasoning to become better distributed. Country sausage should be smoked till it becomes a dark mahogany color.

CLALLAM COUNTY COWS LEAD.

The Clallam County Cow Testing association has for two months stood at the head of the 10 associations of the kind in the state. It was the same two months that Washington stood at the head of the states in the western division in the monthly average production of butterfat per cow. The county production was 341 pounds per cow for the annual record, while the figure for the state was 200 pounds. Members of the association are making an effort to raise all calves from the best cows in the association.

NO ROOM FOR INDIFFERENCE.

No indifferent live stock man succeeds. Live stock production and marketing is a science.

CHARLES BULL HEREFORD SALE.

The Charles Bull sale of Herefords on Saturday was advertised but little and, held on the last day of the show, proves that interest can be held as long as the show continues. Breeders will not be afraid of Saturday sales hereafter. True, prices were low, but it is a year of low prices. The females were barely in sale condition and were young. Mr. Bull would have liked better prices, but expressed himself as satisfied. The following is a complete list of the animals sold, buyers and prices:

Bulls.

Donald Carlos, born January 10, 1922—Walter Gover, Halfway, Ore. $150
Baby Carlos L., born October 20, 1921—Walter Gover $145
Baby Carlos A., born September 30, 1921—John Wilson, Waterman, Ore. $100

Females.

May Donald 8th and calf, born October 25, 1916—Walter Gover $150
Maude, born April 21, 1918—A. Osborne, Astoria, Ore. $130
May Donald 6th, born November 20, 1916—A. Osborne $130
Belle A., born June 8, 1918—Walter Gover $60
May Generous, born November 11, 1920—Sherman Thun, Blaine, Ore. $85
May D. Generous, born May 22, 1920—Sherman Thun $85
Josie Generous, born September 18, 1920—Sherman Thun $85
Donna Generous, born January 25, 1921—Sherman Thun $85
Belle Carlos, born September 30, 1921—Harold Holmes, Mabton, Wash. $65
Anna Carlos, born August 18, 1921—Rimbol Young, Sumpter, Ore. $60
May D. Carlos, born May 24, 1921—Sherman Thun $70
May Donald Carlos, born January 31, 1922—S. C. Kipling, Haines, Ore. 30

THIESSEN HEREFORD SALE.

On Wednesday of the show (Nov. 8) Henry Thiessen of Sweetwater, Idaho, sold 59 head of Herefords for a total of $9930, or an average of $168.30. Cows sold up to $305, but all bull prices were low. Most of the offerings were in good sale condition and will go out on the ranges for which they were bought and make useful breeding animals. Walter Gover of Halfway, Ore., was the largest buyer, with other range men taking quite a number of the consignments of both sexes. Following is a complete list of animals sold, buyers and prices:

Bulls.

Lord Carlos, born April 30, 1921—Sold to J. E. Smith, St. Paul, Ore. $165
Bonnie Brummel 2d, born January 15, 1922—Walter Gover, Halfway, Ore. $135
Rupert's Model 37th, born February 13, 1921—Henry Zorn, Aurora, Ore. $105
Major, born March 13, 1921—Edson L. Foulke, Gazelle, Cal. $100
Bonnie Donald, born March 17, 1921—Walter Gover $100
Young Bonnie Lad (twin), born March 10, 1921—Walter Gover $100
Rupert's Model 34th, born September 6, 1920—O. M. Plummer, Portland, Ore. $100
Rupert's Model 42d, born February 27, 1921—Walter Gover $90
Rupert's Model 39th, born March 25, 1921—Edson L. Foulke $85
The Beau Carlos, born April 19, 1921—B. M. Smith, Newberg, Ore. $85

Females.

Bonnie Jane, born January 25, 1921—Methow Valley Live Stock company, Winthrop, Wash. $305
Bonnie May, born November 1, 1920—Herbert Chandler, Baker Ore. $235

POULTRY 174

$2000 FOR FIVE HENS—A RECORD PRICE for record hens. We announce the purchase of F. E. Gilbert's winning pen of White Leghorns at the recent Puyallup egg laying contest. These five birds laid 1421 eggs in 12 months, thus establishing a new world's record. These birds are to be mated with the best cockerel to be obtained and used in building up Queen Quality strain of chicks. We have also contracted with Mr. Gilbert for the eggs from the pen sisters of these wonderful birds. We will have a limited number of chicks and eggs from them for sale this season. The greater part of them will be used for our own use. In addition to the Gilbert birds, we will have many flocks direct from Hollywood and Tancred stock. We also hatch R. I. Red and Barred Rock chicks of exceptional quality. We are now booking orders for early delivery and have sufficient capacity to assure prompt delivery at time promised. Incubators, 15 per cent off. We offer a special discount of 15 per cent on Queen incubators purchased from us during November and December. In addition to the Queen, we carry the Master's incubator, Petaluma electric incubator, Blue Flame brooders, American brooder stove and are agents for the Kresky brooder stove. Write for our new catalog. Queen Hatcher, 87 Sewart st. Seattle, Wash. Ell. 2054.

BABY CHICKS—FRESLAID FARM HUSKies for 1923. Banish hard times with a bunch of our profit-making Leghorn chicks. Time flies. The early buyers are picking the best dates so write now for free instructive catalog. It tells how to make $500 a year from your farm poultry. Satisfied customers made our growth possible. We claim the largest electric incubator in the world. Freshlaid Farm, Colfax, Wash.

BUY YOUR BABY CHICKS FROM THE White hatchery, member of the Sonoma county farm bureau accredited hatcheries. All flocks approved by farm bureau inspector. We handle accredited "A" grade chicks and "AA" grade for the poultryman who wants something better. Write us at once for information, prices, etc. White Hatchery, Petaluma, Cal.

CHAPTER TWENTY-FIVE.

A Nightlong Flight for Life.

"All right." Holloway grinned. "Risk me to find the shortest, slickest route out of this hornet's nest just now."

Away the whole party marched. One was treading on another's heels Indian file. And in spite of the fact that they were tired, or had been, and had not eaten a bite since daylight, they were traveling at least twice as fast as they had traveled when coming.

Close behind Jess came Givens, and just behind Givens followed Orlando, leading his pack cow. Those farther back saw to it that Brindle did not delay the party's progress.

On they hurried, traveling as nearly as possible the route they had come. The country was very broken, and was gradually rising as they approached the great mountain range. Sometimes they were in woods, and much trouble they had picking their way among the fallen timber. Seldom did they speak, and then only in tones a little louder than a whisper. Those bringing up the rear kept glancing back often, hoping to discover pursuers before the pursuers discovered them.

Well aware that they were fleeing for their lives, nobody wanted to stop and rest. Even Brindle, usually rather lazy, had caught some of the excitement and did not need much urging.

Hour after hour the fugitives hurried on, usually without even a game path to follow in their flight. Since that lone spy had disappeared, not an Indian had been seen. But the fleeing gold seekers did not for a moment doubt that red pursuers were already hot on their trail. All glanced backward from every high point; and they never looked back without noting the height of the sun. They were anxious for night to come down and cover their retreat.

At last, after what seemed many hours, the sun was actually setting behind some mountains far to the west. All the fugitives saw it with no small relief; and their relief was still greater when the red ball had actually disappeared. Just now they were crossing the nearly bare ridge of a mountain spur. By the time they had made their way down the long slope to a stream, dusk was thickening around them.

There they stopped to drink from a mountain-torrent, and to let Brindle drink. After they had crossed the stream, whose banks were overgrown with brush, Cooper called a halt, then said: "Boys, have we got anything at all to eat? If we have, I'm in favor of staying here at least a few minutes. We can eat a snack while we rest and let Brindle rest."

"I have some milk in one of my milk bottles," Orlando replied. "I milked it this morning before daylight. And I'm guessing Brindle's got more by this time. I can milk that if we lie by long enough."

"Only this minute it has occurred to me that I'm carrying two or three pounds of dried buffalo meat," Cooper told them. "My wife put it down in the bottom of my pack, just before I started on this trip. She said, I recollect, that we might come to some place where game would be scarce, and a little dried beef would help out. We've found game so plentiful, I'd even forgot the dried meat. But we'll make a meal of it."

"Your wife is a wise woman. And it's a lucky thing for us you forgot," said Holloway. "We're needing something to eat fearfully bad just now, it seems to me. It's been so long since we ate; and we've been traveling such a horse-killing gait, must confess I'm feeling a litt'e weak in the knees."

"Night's almost here. Why not find a good hidin' place, some'r's along this stream, and take a restin' and breathin' spell?" proposed Esau.

All were willing enough. After following up the stream about 200 yards, they found a grassy opening among some bushes, with the creek bank on one side of it. An advantage of this position was that they couldsee, through an opening in the bushes on the far bank, the mountain over which they had just traveled.

The cow's pack was removed, but not her saddle, and she was allowed to graze. While she was grazing Orlando miked her. Then he divided the milk he already had, giving each man a little more than a half pint. Not knowing when they would dare shoot any game, or kindle a fire to bake any bread, they thought it prudent to save the milk just milked till later. For it was understood that they would have to travel all night long.

They had finished eating what they could find to eat, and all had stretched themselves out on the grass to rest, when Holloway, lying where he could catch a clear view of that mountain behind them, sat up suddenly, with a warning "Sh." There had been little talking; but the warning was to make sure that nobody should speak aloud. Soon he raised his hand and pointed toward the mountain top.

At once every man sat up. And then they quickly crawled to where they could see what Jess was gazing at. What they all saw was startling enough.

A string of Indian warriors, following in one another's tracks apparently, was just coming over the mountain. While it was almost dark down here, daylight lingered longer up there on the mountain top, and they could be seen distinctly. They were not quite on the white men's trail, but were crossing the mountain a little lower down. The Utes—they were supposed to be Utes—had probably been trailing these miners. But by this time daylight had so nearly faded out, even up there, that they could not distinguish the trail longer. So

Warrior after warrior passed over the mountain.

now they were following the general course that the fugitives had been traveling, and they were hoping to discover the white men somehow.

Warrior after warrior came over the mountain, till more than 30 had been counted. And some had crossed, possibly, before they were discovered.

"They're right after us! Anybody can see that!" Esau said, scarcely above a whisper.

"They certainly are after us!" answered Cooper. "And we've got to be wise—as wise as they're cunning, or they'll nab every mother's son of us."

"That last Indian has stopped on top of the mountain," Holloway whispered to his companions. "He seems to be waiting for something or somebody."

Now Sanders answered: "More likely he's thinking we'll be fools enough to start a camp fire; and from that high point he can discover either the smoke, or the light from it."

"If that's what they've got in their red noggins, they're fooling themselves outrageously," Cooper remarked.

"But they're so close onto us! We've got to give 'em the dodge somehow! If we don't they're likely to run us down, even without a light, all that swarm of warriors." said Orlando, in some evident alarm.

"I—I'm guessing that's right," Cooper told his partners. "And we'd better slip out of here just as quietly as we can. I believe we ought to follow right on up the creek."

The others were willing; and they were all soon in motion. Not till they had marched two or three miles, and were supposed to be out of the dangerous vicinity, did they halt for a brief consultation.

Now Cooper spoke: "In daylight, while the redskins could trail us, we traveled a little south of east. Since we started up this creek, we5ve been headed almost south. The Indians will probably expect us to keep on east. That is, if they don't expect us to go into camp. But instead of moving the way they expect us to move, we'd better follow some other course."

"But what—what other course can we travel, John?" demanded Givens. "Whatever we do, we've got to shake the dust of this redskin-poisoned country off of our feet, and that at the earliest minute possible. First thing, we must get back over the snowy range."

"Oh, yes, we'll keep hustling till we're out of here, Jeff. This country is altogether too hot for us. But we can keep on in this direction for a few miles, and then turn toward the snowy range again. We must get across that before we stop long or rest long."

"As good a plan as any, that seems to be," Holloway told them. "Right on up this creek it is, then. And I'm ready to travel."

"Let's go," said Givens.

Very soon the weary, hard-pressed fugitives were on the march again. Knowing that their lives would be in danger, they dared not rest till they had put many miles more behind them.

A few miles farther up the stream they left it and turned almost due east, across a very broken country. Jess Holloway was still leading; and the party was still traveling in a string—one behind another. Every man had his gun in his hands or on his shoulder. And every man had a good-sized pack strapped to his back.

When would the fleeing miners ever forget that awful night? Weary though they were, they pressed forward relentlessly. The farther they traveled, the steeper and rougher and rockier the country became. Fortunately their previous experience in the mountains had toughened them. Climbing this mountainside would have been a laborious task, even in broad daylight. But now, with only the dim starlight to half reveal the way, their hardships were something frightful. Still, not one of the fugitives spoke of stopping. Anything was better than falling into the hands of those merciless red pursuers of theirs.

In selecting his course, Holloway had to be careful to pick out a route that Brindle could follow. As usual, Orlando was leading the cow, while Esau or somebody else came close behind, to keep her from lagging back. Probably because she had been resting for the last two or three days, Brindle was standing the forced march fully as well as any of them—better than most of them.

Not till after hours of climbing, climbing, always climbing, which seemed like ages, did anybody speak of pausing. But at last, when it seemed that endurance could stand the strain no longer, Cooper called to those ahead, though in rather cautious tones: "Boys, suppose we hold up a little while now. Beats any traveling I've ever run up against, this does! It's a man-killing job, going up this mountain side in the dark. Suppose we breathe a spell, and then take a new start."

"Amen to that." Givens was heard to groan out.

All the others were willing, and more than willing, and said so. On coming to a little level spot, they stopped. Without going to the trouble to remove his pack, every man first sat down and then threw himself on it to rest. Before doing any resting himself, Orlando, usual, let down the two parts of the cow's load, so that she could rest as well as the men.

For several minutes all were too weary to do any talking; they reclined on the ground in silence. Even Frisk, the one member of the party not carrying a pack, was tired. He came and stretched himself near Orlando, with his head on his paws.

At last Holloway spoke: "I'mbeginning to shiver. And I was sweating when I dropped down. From the way the air feels here, we must be nearing the snow line."

"We are," Orlando answered. "You can tell that from the size of the trees. Just see how scrubby this timber is getting."

"Yes, and how scatterin' the trees air," added Esau.

For perhaps half an hour, in all, the fleeing miners rested there on the mountain side. And they might have rested longer; but by this time all were so chilled by the night air that they were eager to get in motion again and warm themselves.

They had been traveling due east. But now they changed their course to southeast. Soon they were climbing again. Their leader, Holloway, was guiding himself by frequent glances at the north star.

In the semi-darkness the climbing was still very hard, the mountain being as steep and rugged as ever. But, knowing that there was no other way of escape, all went at their heavy task determinedly. And the higher they climbed the more trouble they found with their breathing. That was because of the rare atmosphere. Soon, on this account, they had to stop every few minutes to rest and breathe.

At first most of the men sat down at every halt. But they soon began to complain that the exertion of rising to their feet tired them as much as they had gained while sitting. After tha tthey merely stood still and rested. Having climbed 30 or 40 yards, slowly, painfully, they would find themselves tired out. But a minute or two of standing motionless would make them feel fresh and vigorous again. And so, by hard degrees, they kept working their way up toward the highest part of the continent—the backbone of the continent.

"Oh, this air—this air!" groaned Givens. "It wasn't made to—to breathe! Anybody can—can tell that!"

"It is rather troublesome stuff to—to get into your lungs," gasped Cooper.

"I don't seem to have much trouble getting it into my lungs," Orlando gasped when I try to breathe it out. Doesn't seem to want to go."

At last—it must have been midnight or a little later—they had climbed to where timber and other vegetation had disappeared. And a light place ahead meant that they were almost at the edge of the snow.

"Boys, what do you say to—to another little breathing spell—before we—we tackle that—that hard job???" panted Givens, when they were only 30 or 40 yards from the snow line.

"I'm very thirsty. I've got to have a drink or eat some snow before I can rest," Holloway said.

"Plenty of little streams trickling down from the edge of that snow, I'd guess," Sanders remarked. "At least there were where we crossed this range before."

(To be continued.)

Bits of Fun FOR Everyone

A Slow Process.

"Does your wife practice economy,"

"Oh, yes; she practices it. But she doesn't seem to learn very fast."—Judge.

Nothing Else.

Mr. Meane—I have nothing but praise for the new minister.

Brown—So I noticed when the plate went around.—Successful Farming.

There's a Difference.

Teacher—Spell "cloth," James.

James—(Silent.)

Teacher—What is your coat made of?"

James—Father's old pants.

In the Agrarian Bloc.

"What has been your previous business experience?"

"As field manager."

"For whom?"

"For Farmer Brown, just outside of town. I managed his field hands for him two summers hand running."—Farm Life.

A Desideratum.

"Have you heard anything about when Zeke Gawner's funeral will take place?" inquired an acquaintance.

"Eh-yah!" replied Gap Johnson of Rumpus Ridge. "His wife 'lows it will come off tomor' at 2 o'clock if a big enough crowd gathers."—Country Gentleman.

The "Green" Hand.

The Boss—"What's the idea of hanging that gate before you have the fence built on either side of it?"

His Nibs—"Why, I thought we'd better put up the gate first so as to get the cattle accustomed to coming through it before we strung the wire!"—Orchard and Farm.

No Night Owl.

Farmer Jones (who has been having labor troubles)—Now, before I take you out of town I want you to understand you'll have to get up in the mornings.

Hay Hand (hopping into the flivver)—Thanks, boss, you're a man to my likin'. Most of the farmers round here expect a man to git up in the night time, before he's had his sleep out.—Country Gentleman.

Modern Arithmetic.

"Willie," said the teacher, "how much is six and four?"

"Eleven," said Willie promptly.

"No. Try again."

"Twelve."

"No."

"Thirteen."

"No, no, you're guessing now. But why couldn't you have guessed ten?"

"Because it don't make ten," said Willie confidently. "Five and five make ten. I remember that."—Successful Farming.

Experienced.

The determined-looking woman alighted from the driver's seat as the victim of her car picked himself up from the dust and began to take stock of his injuries.

"I'm sorry I hit you," she said grudgingly, "but it was your fault. You must have been walking carelessly. I am an experienced driver. I've been driving a car for seven years."

"Well," replied the man as he dusted himself off, "I'm no novice myself. I've been walking for 57 years.—Country Gentleman.

Just Folks

You can rout dread by action.

Worldly wisdom would seem to disguise aggressiveness and display simplicity.

Misfortune creeps into fortune and fortune creeps into misfortune.

Obstinacy saves as well as destroys; probably has saved more times than destroyed.

You will find "enough" among the dozen biggest words of life.

The biggest problems are solved by the simplest rules.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I wrote you once before, about a year ago, but it seems I don't get time to write often.

We have been married four years and have lived here near Odessa on this ranch all the time. The first year we had a fine crop, but since that we've been going backward on account of poor crops. But we shouldn't complain; we have plenty to eat and wear and the greatest of all blessings, we have health and a happy home. We have a little girl 2 1-2 years old who had scarlet fever last spring, which brought on complications, causing a serious surgical operation, and we feared we would lose her, but she has fully recovered and we are very thankful.

I can all my meats and vegetables as well as my fruits and find it very profitable. My husband gave me a pressure cooker for my birthday and I enjoy using it very much. I do all my canning with it and much of my cooking as well. One can cook a whole meal in it in such a short time.

I can navy beans in tomato sauce with a little salt pork in pint jars, then when we come home from hunting or any place we can warm them and soon have a good hot meal along with canned meat and bread and butter.

I never have a meat bill any more, as we raise all our meat, such as chickens, pigs, turkeys and calves. I used to have a meat bill of $10 to $15 a month. I used to have a grocery bill of $25 to $30 a month and now it seldom ever exceeds $5 a month, and that I pay with our "cream money." We milk three cows and sell the cream, keeping enough for butter and our own use. From these three cows we get from $9 to $12 a month. We have saved a great deal on fuel this year, as my husband brought home ties enough from the railroad track to last for two winters. The Great Northern repaired their tracks and the old ties were given to any one who wished to haul them away.

There are many ways that one can save and I am thankful for these hard times, for I have learned so much since we've been "poor." My husband and I were inclined to be extravagant, our parents being fairly well off, and it never occurred to us to be economical until the last two years; now we study things out together and decide on the most economical and profitable way to do things. We have learned that the cheapest way isn't always the most economical and each new circumstance needs consideration and sometimes we have to think pretty hard.

It isn't easy to deny ourselves so much that we really need, but in the end I think it makes better men and women of us. I often thank God for these hard times and accept them as a blessing, but not always, for sometimes I rebel when I get cross and tired. I do try hard to be cheerful and pleasant, though, for nothing makes home so dear as a kind, sweet mother. Neither my husband nor myself have an own mother, as mine died when I was 8 and his when he was 9 years old and we both had stepmothers. I want to be everything to my baby girl that a mother should be and when I find myself getting cross with her I take myself to task, for I want to leave pleasant memories to my loved ones and I want them to always think of "mother" as kind, good and lovable.

I have written longer than I intended and I want to thank you for all your kind help. I enjoy the Family Circle very much. I am 24 and would enjoy writing to some of the Circle sisters about my age and especially some who live near Milton, Ore., or Walla Walla, Wash.

Washington MRS. J. W.

Family Circle Girls

Dear Mrs. Barland: I am just a school girl, 15 years of age, but I am going to write to you just the same. I read and enjoy the letters in the Circle and have for a long time. I am to graduate from the eighth grade this year. We do not live on a farm, but have a cow and some chickens. I have three sisters, two younger and one older than I, and two brothers younger. I have to care for them occasionally and I like to read the helps on caring for children. I find it very interesting to notice their different likes and dislikes.

My younger sister likes to draw and I sometimes draw a picture of a boy or girl and she will name it and then she wants to draw one and have me name it. This keeps her busy and lets me be working.

My oldest sister is in school and is very bright. Her special pastime is giggling. My two brothers are very mischievous, but can be coaxed into working if I am patient with them. My mother is gone a good deal and I have to manage the best I can.

An old friend gave me a violin and I would love to learn to play it, but I must wait till my brothers and sisters are grown up. It is very hard to wait, but I try to have patience. The letters of the Circle are so cheery that I read them as soon as the good old FARMER gets here.

Would some one tell me the secret of friendship? I have had many friends, but not one that treats me right at all times. I am not popular or anywhere near beautiful, nor even good looking, so maybe that accounts for it. I should so much like to have a girl friend whom I could truly trust. It might seem that I am not true to my girl friends, but I am much more so than they are to me.

Washington. "LONELY."

Dear Mrs. Barland: I am 17 years old and thought I would express my opinion about kissing boys. I think it silly and out of place. If boys and girls can not go together without it they had better stay at home. If there is any kissing done it certainly isn't the girl's place to do it. A girl should have enough self-respect not to allow it and a boy should have enough respect for the girl and himself not to want to make her so common. I hope to hear other girls express themselves on this subject. E. M.

Oregon.

Dear Mrs. Barland: I always read the Circle and find it interesting and helpful and I read "Tinnie's" letter. At first I thought it very ridiculous, but as I thought about it the more serious it grew. Tinnie and I are about the same age. I am 17, with goldish-brown hair, large gray eyes, a fair complexion and just as tall as our beloved Mary Pickford.

As for kissing a young man goodnight or goodby, I think it unladylike, unless one is sure of becoming his wife. I have had lots of experience with young men who lovingly tease for just one kiss, "just one," but, my dear Tinnie, let the young man do the loving and kissing, as in romance they are pictured as doing. A girl can show her love in different ways if she wants to show such regard. Girls, we will have plenty of time to kiss our young men after we are married. An affectionate little hug and a loving look will show that we care and will increase his love for us. So let the young man do the kissing if any is done when we say goodby. Do you agree with me?

Washington. D. G.

Dear Girls: There follow a number of questions asked by different girls. I will answer them according to my best judgment for the benefit of all. When a young man calls upon a girl, along what lines should conversation be conducted and what other way should one entertain him?

It is best in entertaining any one in your home to choose conversation which will be interesting to your guest. You will of course know something of what he is interested in and draw him out to speak of his plans or about things he knows something about.

For instance, if he is a farmer and has stock that he is proud of, give him to

(Continued on the following page.)

POTS AND COOKERS

The "OMAHA" is a real High Pressure Steam Cooker, Canner or Hospital Sterilizer. Stands over 30 pounds of steam. Saves 2/3 the time and fuel. Cooks potatoes in 10 minutes, beans in 30 minutes or toughest meats in 40 minutes. Entire cover removable and STEAM TIGHT. Sold with or without covers. The POTS are made in ONE SOLID PIECE, SEAMLESS and SOLDERLESS with your choice of PURE COPPER or NICKEL inside and outside. Excellent for rendering lard, candy making, etc. Sizes 11 QUARTS to 44 GALLONS. Write today for the "OMAHA" circular of valuable information, description and prices. Dealers and Agents wanted.

Have a Quick-Lite in Your Home this Christmas!

Here's An Economical Gift No Christmas gift will bring greater cheer and happiness than a Coleman Quick-Lite Lamp. And you'll find it such a practical, economical and beautiful gift! It will delight and benefit every member of your family—at a cost of only about a penny a night! Mother, "Dad" and the kiddies will enjoy its wonderful 300 candle power brilliance. Not only at Christmas time, but throughout the coming years, the soft sun-like brilliance will protect your eyes—and keep strong and young the eyes of your loved ones—the children. As an extra gift for "Son" or "Dad"—get a Quick-Lite Lantern!

Use This Lamp 10 Evenings Write today for our Special "10-Day Visit" Plan. This liberal plan puts the Quick-Lite on your table to add immeasurable radiance and cheer to the holiday season. Send the attached Coupon. Simply mention the name of your nearest hardware store or general merchant. Make this Christmas your happiest one. Send Coupon--*Now*

THE COLEMAN LAMP CO.
Desk P. N.-81. Wichita, Kansas.

Two Lights Needed in Every Home!

The Quick-Lite Lamp

—is 300 candle power—20 times brighter than an old-style oil lamp at one-third the cost.

—is easy to keep clean—no wicks to trim, no dirty chimneys to wash, no soot, no smoke, no dripping oil.

—can be used all over the house.

—is economical—gives over 40 hours brilliant service per gallon of fuel used.

—is beautiful—handsomely designed and elegantly finished.

The Quick-Light Lantern

—is built to operate just like the Quick-Lite Lamp—gives same 300 candle power brilliancy.

—is just the thing for night hauling, harvesting, ditching, road grading, camping, fishing, hunting, auto-touring, etc.

—won't blow out in the wildest storm.

THE COLEMAN LAMP CO.,
Desk P. N.-81, Wichita, Kansas.

Without obligation to me, please send me full particulars of your "10-Day Visit" Plan on the Coleman Quick-Lite.

High Points in News of the Week

The house of representatives last week passed the ship subsidy bill by a vote of 208 to 184. The measure now goes to the senate, where it is predicted it will have rougher sailing than in the lower house.

The extra session of congress has ended automatically and the regular short session opened Monday noon of this week. Leaders in the fight for the ship subsidy bill will endeavor to secure its passage as early as possible.

The most dramatic feature of the extra session of congress was the filibuster by democratic senators, led by those from the south, against the anti-lynching law that was supported by the republican organization. The filibuster prevented the discussion of any other legislation until the republican leaders were compelled to agree that the anti-lynching bill would not be taken up again during the present congress.

Special interest attaches to a movement launched last week at a conference between President Harding, Secretary of Agriculture Wallace and 12 republican senators, headed by Senator Watson of Indiana. The movement provides for the consolidation into one bill of several approved proposals for financial aid to agriculture. The plan being worked out is said to enable the government, through the federal farm loan bank, to grant financial relief to the small farmer as well as to the large one and much more quickly than has been possible in the past. All 12 of the senators present at the conference pledged their support to the immediate consideration of the measure in congress.

* * *

Former Premier Clemenceau of France is still in the United States, delivering addresses in large eastern cities with a view to converting this country to the French view of the problems of securing permanent peace and reconstruction in Europe. The former premier is anxious to induce the United States to take a hand in European affairs, either through membership in the league of nations or otherwise.

Last week he declared that Germany is even now preparing in a systematic way for a future war for the purpose of crushing France, if not actually of dominating the world. A dispatch from London seemed to corroborate his statement, it being declared that the British government has convincing proof that Germany is now building up great military equipment in Russia and training not only the German people, but the Russian people in the arts of war. It is declared that the German plan is to join with Russia when the opportune time comes, destroy Poland, which lies between these two countries, and then, together, again march westward for the overthrow of France.

Former Premier Clemenceau declares that the so-called German republican government is but a camouflage behind which the same spirit that dominated Germany prior to and during the war is operating. He declares also that the Turkish uprising and its military successes over Greece are due to German inspiration and leadership.

It is becoming apparent that the French government is becoming desperate over its inability to secure the cooperation of its former allies in compelling Germany to live up to the terms of the treaty of peace. What appears to be a fairly authentic but unofficial report says that if France does not obtain satisfaction before January 15 she alone will advance further into Germany for occupation of the Ruhr district as penalty for German failure to live up to the terms of the treaty.

* * *

About 40 members of congress met in Washington last week at the call of Senator La Follette of Wisconsin and formed what is to be known as the "progressive bi-partisan bloc." The reported purpose of this new bloc is to measure all legislation upon the basis of its "progressiveness." Senator La Follette presided over the organization session. Among the speakers were President Gompers of the American Federation of Labor; Governor Blaine of Wisconsin; Senator Norris, republican, of Nebraska; Senator Brookheart, republican, of Iowa; Senator-elect Wheeler, democrat, of Montana; Senator-elect Frazier, nonpartisan-republican, of North Dakota; Representatives Frear, republican, of Wisconsin, and Representative Sinclair, republican, of North Dakota.

* * *

Governor Groesbeck of Michigan last week appointed Mayor James Couzens of Detroit to succeed Senator Newberry as United States senator. Senator Newberry resigned following the election in Michigan, when a democratic senator was elected in Michigan on an anti-Newberry platform. The new senator is a man of much wealth. He was elected mayor of Detroit in 1918 and was reelected last year by the largest majority ever given a Detroit mayor. He has the indorsement of Henry Ford, who was defeated two years ago by Senator Newberry.

* * *

Secretary of War Weeks last week declared that the present authorized strength of the regular army is inadequate and that further reduction would be inexcusable. The present authorized strength is 125,000 men and 12,000 officers.

A Giant Buying Corporation Is Proposed

A news dispatch from Washington, D. C., says:

A vast buying and selling company, with an authorized capital of $100,000,000, to market agricultural products would be created by a bill introduced in the senate by Senator Norris of Nebraska, chairman of the committee on agriculture. Started by a federal appropriation of $100,000,000, the Farmers and Consumers' Financing corporation, as it would be called, would be invested with the broadest of powers, the scope of its operations extending to all foreign nations as well as the United States.

Clothed with the power to issue bonds for five times its capital, the gigantic corporation could store the commodities to wait for higher prices or sell them when times were considered propitious.

Far more comprehensive than his previous bill, which had a large measure of support in the last congress before it was superseded by the Kellogg bill reviving the War Time Finance Corporation, Senator Norris said he believed a favorable report would be made because the agricultural committee had approved a bill very similar to this one.

The real object of the bill is to cut out the thousands of middlemen who take profits on food commodities between the time that they leave the hands of the producer and the time they reach the hands of the consumer.

"More than 40 per cent of the cost of commodities to the consumer goes into the pockets of the middlemen," Senator Norris said. "Under the proposed system the producer could get more money for his commodity, while the consumer could buy it for less. The two suggestions seem contradictory on their face, but they are not."

The secretary of agriculture and two directors, to be appointed by the president, would operate the corporation.

Farm Business and Markets Outlook

Family Circle Girls

(Continued from the preceding page.)

understand you are interested to hear about it. If it is an orchard or poultry or whatever he seems to have an interest in. The people who are considered the best company are those who give the other fellow a chance to voice his opinions. Remember this, girls. Also the people who have the greatest number of friends are those who see good in the greatest number and speak of it, and omit to mention the unlovely traits which most likely are so apparent that no mention of them is needed.

"What should a girl do when a young man wants to dance with her and she is always on the floor dancing with some one else and knows he wants to dance with her?"

I would say it should be up to the young man to settle that question by getting ahead of the other fellow. "Where there is a will there is a way."

"What should a girl say to a young man who asks to take her home and she doesn't wish his company?"

A good way is to arrange with some one else to take you home. Get another girl friend to help you out and a time or two of refusing should make the matter plain to any young man that his company isn't wanted.

"Is it proper for a girl to speak first to a young man when he is angry?"

That depends upon what he is angry about. If you have made him angry in some way where you were rude or to blame and you are sorry, I think it all right for you to speak first. But if he has done some improper thing and is angry because you have resented it, then let him come and apologize before you speak.

"Is it proper for a girl to use rouge at a dance?"

If it is proper to use rouge at any time, why not at a dance? I don't think much of the rouge at any time, but if a girl is very pale I think a little touch of color, just a touch, remember, is not bad. But if a girl is all painted up, as some are, and goes to a dance with it on her face and lays her face on the shoulder of her partner it would be well to carry along a whisk broom hanging at her side to remove the damage done to the young man's coat. Dear girls, be moderate in the use of face powders and, for decency's sake, keep your heads level on your own shoulders and entirely off the shoulders of your dancing partners.

Some will say it is "old-fashioned" not to fall in with all these new ways. Yes, girls, it is, but it is also rather old-fashioned to dress in a modest way. It is somewhat old-fashioned to have family prayers in the morning and evening, but I have a beautiful memory of families, every member gathered around while the father read a chapter or each member read a verse in the Bible, then all knelt while father asked God's blessing on the family and that they might be kept safely and good through the day or the night. They would go out from that circle with words like these in their minds: "Blessed are the pure in heart for they shall see God." "Remember thy creator in the days of thy youth." "A soft answer turneth away wrath, but harsh words stirreth up anger."

These things are old-fashioned and even the words I have quoted come from a very old-fashioned book, but it is the book upon which our government is founded.

We are a great people and have a great country. It has been said that no country ever rises higher than the standard upheld by the womanhood of the country. It is a matter of history that as the standards of morality are lowered the country weakens in power. It is well to read Roman history and think about our responsibilities.

Dear girls, use your own good sense, keep clear-headed and don't be afraid to stand for what you believe to be right, no matter if you stand all alone. But you will not stand alone, for as soon as you make your position known you will find some at least who only needed some one to make a start in the right direction and they will uphold your position. I have but one object, dear girls, and that is to help you. Your friend,

ALICE W. BARLAND.

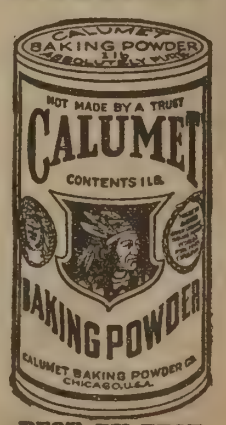
GOOD THING TO STUDY.

A practical book on simple mechanics would be a valuable thing for the farm family to study during the winter.

Which is Larger the Sun or a Cent

The sun is the largest but you can hold the cent so close to your eye that you'll lose sight of the sun.

Don't let a cheap price or a big can baking powder make you lose sight of quality



CALUMET

The Economy BAKING POWDER

Is the quality leavener—for real economy in the kitchen, always use Calumet, one trial will convince you.

Its sales are 2½ times as much as that of any other brand.

BEST BY TEST

THE WORLD'S GREATEST BAKING POWDER

Home Recipes

Cherry or fruit pudding: One cup stoned cherries or other fruit. If fresh put one-half cup of sugar over to draw out the juice, to be used for the sauce; one cup sweet milk, two and one-half cups flour, pinch of salt, two tablespoons of melted butter, two teaspoons of baking powder. Steam one hour.

Sauce: One pint of water, butter size of an egg, one cup sugar and the juice saved from the cherries and cook, thickening with a little cornstarch or flour. If canned fruit is used one can save out one-third cup of the juice for the sauce and not quite so much sugar is needed for sweetened fruit.

MISS ALICE BISHOP.
Wisconsin.

DON'T SAY YOU CAN'T! YOU CAN!

No matter how busy you are, you can not afford to work continuously from daylight till dark or longer. Housework is more tiring than field work. It is more tedious. There is less fresh air. Even though your husband be one of those fellows who never get tired; even though he work from 4 a. m. to 9 p. m., don't let your taking of half an hour for complete rest every afternoon hurt your conscience. Take it. Don't say you can't, for you can.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3766. Lady's House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 6 yards of 36-inch material. The width of the skirt at the foot is about 2 1-2 yards. Price 10 cents.

4009-4173. Lady's Costume—Waist 4009 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 1-8 yards of 32-inch material. Skirt 4173 cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. Its width at the foot is 2 3-8 yards. Two separate patterns, 10 cents for each pattern.

4186. Girl's Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size with sleeve requires 4 yards of 32-inch material. Without sleeve 5-8 yard less is required. Price 10 cents.

4167-4049. Lady's Costume—Blouse 4167 cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Skirt 4049 cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is 2 1-8 yards. To make the dress for a medium size will require 6 1-2 yards of one material 40 inches wide. Two separate patterns, 10 cents for each pattern.

4184. Girl's Dress—Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires 3 1-2 yards of 44-inch material. Price 10 cents.

4191. Lady's Slip—Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3 yards of 36-inch material. Price 10 cents.

4190. Lady's Night Dress—Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 4 3-4 yards of 36-inch material. Price 10 cents.

4168. Lady's Blouse—Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3 7-8 yards of 32-inch material. Price 10 cents.

3400. An "Easy to Make" Apron—Cut in four sizes: Small, medium, large and extra large. A medium size will require 2 3-4 yards of 27-inch material. Price 10 cents.

4171. Child's Dress—Cut in four sizes: 1, 2, 4 and 5 years. A 2-year size requires 2 1-4 yards of 32-inch material. Price 10 cents.

3790. Doll's Play Suit—Cut in five sizes for dolls: 16, 18, 20, 22 and 24 inches in length. The suit will require 3-4 yard of 38-inch material for a 24-inch size. Price 10 cents.

2970. A Set of Pleasing Toys for the Nursery—Cut in one size. Either style requires 3-4 yard of 27-inch material. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates, and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various simple stitches), all valuable hints to the home dressmaker.

SPECIAL CHRISTMAS PATTERNS.

So that our readers may secure patterns for making Christmas gifts without having to wait the usual length of time which it takes to get them from the east, The Pacific Northwest Farm Trio has obtained the following special Christmas patterns, which will be carried in stock until after the holidays and can be supplied on short notice:

2300—Set of animals, pig, dog and sheep.
2937—Toy chicken and duck.
2967—Set of toy animals, horse and cow.
2970—Set of toys, "Roly Poly" and cat.
3061—Set of doll's dress, cape and bonnet (five sizes).
3438—Ladies' aprons.
3600—Ladies' kitchen apron and oven cloth.
3770—Set of boudoir caps and slippers (three sizes).
3790—Doll's dress, slip-on style (five sizes).
4144—Ladies' dressing sack (four sizes).
4194—Set of bibs.
4195—Set of bags for shoes and slippers.
4196—Doll, with clown suit, hat and rompers (three sizes).

Underwear

Warm Durable Comfortable

ON the farm, only knit underwear will give the warmth and wear required, and R. A. Underwear excels all other makes because it will last for two or three seasons if properly laundered—because its generous, fleecy fabric gives full warmth, even in the coldest weather.

The long, wide, curved gusset gives room where room is needed and prevents gaping. The seams will wear as long as the fabric itself.

R. A. Underwear for Children is equal to the women's garments in warmth and wear, and has the special features of fullness in the seat and special button holes which stay buttoned.

You will want R. A. as soon as you see it, so ask the clerk at your store to show you all the R. A. Points of Excellence.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color the buttermilk. Tasteless.

Doris Irwin tells us what a good time she had Halloween. Teacher gave a party and gave each child a cap of black and orange paper and a Halloween card. They had a fine time playing games and eating candy, orange and black candy beans and another kind of candy and then came a lunch of cocoa and cake. Doris says teacher always gives prizes for good conduct at school and she distributed these at the party. A cat sitting up with a little pumpkin man sitting on his back was the one she gave Doris. Doris lives near the Canadian border in Whatcom county, Washington.

"We live on a farm 14 miles from town," says Catherine Maland of Garfield county, Washington. Catherine is going to send us her picture some time soon. That will be fine, won't it? Catherine had a good time during her vacation in town last summer. She likes her teacher.

We are glad to hear from Violet Miller, who lives in southern Washington. Violet has two sisters and two brothers and she is 10 years old. She says they expect to move to Horse Shoe Bend, perhaps in two years. Her birthday is May 3.

Every Friday night at school Joyce Louise Wise takes part in a spelling match. She had been a winner three times when she wrote to us. Joyce gets her best grades in spelling. She said the northeastern Washington woods were beautiful in their autumn colors of red and yellow. A short time ago their neighbor caught a bear in a trap.

Birthday Greetings

THURSDAY, December 7—Hazel Heimen, 10 years old; Cecelia Hoffman, 11; Vera Roach, 10; Lillie Vinje, 11.

FRIDAY, December 8—Eleanor Black, 11 years old; Glenna Dohrn, 11; Mildred Busley, 10; Myrtle Hutsell, 9; Edna Johnson, 10.

SATURDAY, December 9—Bobby Baumgart, 11 years old; Doris Hale, 9; Donald Naff, 9.

SUNDAY, December 10—Katie Harvey, 11 years old.

MONDAY, December 11—Elsie Bonwell, 11 years old; Bertha Holmes, 8; Helen Pate, 11.

WEDNESDAY, December 13—Miriam Harper, 8 years old; Harvey Ray, 11; Vernon Winterstein, 10; Gerrit J. Polinder, 9.

Batcheldor, Zelma Graham, Mae Taylor, Ruth Ton, Bessie Cryan, Juanita Pollard, Emily Dowell, Marion Lovelace, Alice Knapp, Emelyn Burke, Johan Van Ry, Minnie Westerman, Lenora Requa.

BEDTIME STORIES

By THORNTON W. BURGESS.

GRANDFATHER FROG LOSES A RACE.

Grandfather Frog and his cousin, Old Mr. Toad, had had a falling out. It all came about by Peter Rabbit's saying that Old Mr. Toad was smarter for his age than Grandfather Frog. The merry little breezes of Old Mother West Wind told Grandfather Frog what Peter Rabbit had said. Now, Grandfather Frog will never admit that he is growing old.

"Pooh!" said he, "my cousin, Old Mr. Toad, lives on the land and I live in the water, but I can travel faster on land than he can."

Of course, the merry little breezes had to run right over and hunt up Old Mr. Toad and tell him what Grandfather Frog had said, and, of course, Old Mr. Toad was indignant, very indignant indeed.

"It is no such thing," said Old Mr. Toad. "My cousin, Grandfather Frog, is growing foolish in his old age."

Away hurried the merry little breezes and told this to Grandfather Frog, and, of course, Grandfather Frog in his turn grew indignant and said some more things about his cousin, Old Mr. Toad. Finally Blacky the crow, who had heard all about the quarrel, proposed that they settle the question once for all by having a race on the green meadows.

That was the funniest race that was ever seen. Grandfather Frog and Old Mr. Toad, each puffed up and swelled out with indignation, stood with their front toes on the edge of a line which Johnny Chuck had drawn. Blacky the crow sat in the top of a butternut tree as judge.

"Are you ready?" asked Blacky the crow.

Such a funny race as it was!

Grandfather Frog and Old Mr. Toad said they were ready.

"Go!" said Blacky.

Off started Grandfather Frog and Old Mr. Toad. Grandfather Frog's legs are longest, and in a few minutes he was ahead of Old Mr. Toad. Such a funny race as it was! All the little meadow and forest people ran along beside the two racers and shouted encouragement.

"Go it, Grandfather Frog, go it!" shouted Billy Mink.

"Hurry up, Old Mr. Toad, hurry up!" shouted Johnny Chuck.

Poor Old Mr. Toad did his best, but in spite of all he could do Grandfather Frog was winning the race. Then Peter Rabbit, out of pure mischief, shouted: "Look out, Mr. Toad, here comes Mr. Blacksnake!"

Mr. Toad heard him. Now, if there is any one thing in all the wide, wide world that frightens Mr. Toad it is the suspicion that Mr. Blacksnake is anywhere near. When he heard Peter Rabbit shout that he forgot all about the race, he forgot everything except that he must get away from Mr. Blacksnake. He just went twice as fast as he was going before, and the first thing he knew he heard a great shout from all the little meadow people and forest folks, for he had crossed the line ahead of Grandfather Frog. And the joke of it all is that he didn't stop then, he just kept on going with funny, funny hops until Peter Rabbit caught up with him and told him it was all a joke.

WHOLESOME ENTERTAINING READING For Winter Evenings

The period of long evenings is with us again. The result in most homes is that there is a greater desire and demand for good, wholesome reading. Your state farm magazine supplies this need with entertaining fiction, an exchange of ideas and opinions, a thorough report of live happenings throughout the state, special articles on scores of important subjects, a special corner for the kiddies, and a variety of departments filled with helpful, interesting matter.

You want THE FARMER. It entertains, it informs, it instructs; and it is gratifying to know that as a result of its cooperative plan its cost is exceedingly low.

If you believe in cooperation we are confident that we can count upon your assistance during the season ahead in making our plan a success in your neighborhood as it has been in all parts of the state. What we ask is that you send in your own subscription order at least sixty days in advance of the expiration date on the label, that you include your neighbor's order with your own, and where your own subscription is attended to, to find at least one new subscriber for our lists.

By doing this a great deal of needless expense is eliminated and the subscribers get the benefit of every penny which is saved. Please give cooperation a little boost in your neighborhood.

PROVES CHAMPION CALIBER.

The picture herewith shows the 2-year-old Shire stallion, Forest Prince, owned by H. W. Merritt of Rosalia. Mr. Merritt purchased this colt a year ago at the

George M. Wilson sale near Rocklyn, Lincoln county. The colt has made excellent development and was this year a consistent winner of champion and grand champion honors on the fair circuit.

WINS THIRD PRIZE.

Herewith is a picture of Evelyn Bush of Outlook, Yakima county, and her club calf, Old Homestead's Catherine. The calf is a Guernsey from one of the cows on the Roy P. Bush farm. She was awarded third place in the open class against strong competition at the Washington State fair at Yakima.

KOLRAIN MARION FINDERNE.

Kolrain Marion Finderne, having on October 28 completed her year with 35,339.7 pounds of milk, containing 1,278.58 pounds of butter, has set a new mark for milk protion, not only for the state of Michigan, but for all the world with the exception of the state of Washington, says the Holstein-Friesian World. Her milk record stands second only to the phenomenal production of Segis Pietertje Prospect, surpassing all other producers to date by a margin of nearly 1000 pounds. She is Michigan state champion over all ages for butterfat as well as for milk and is Michigan's second 30,000-pound cow, as well as the second cow in the state with over 1000 pounds of butterfat, and the second with two-year records above 1000 pounds of butter.

LADY STEWART A CHAMPION.

Lady Stewart of Menie, 17-year-old Ayrshire cow owned by E. A. Van Tassell of Wenatchee, Wash., was the fourth member of a quartet of dairy world champions at the Pacific International. She holds the world record for Ayrshire cows at 16 years of age—14,688 pounds of milk in 300 days, containing 530.5 pounds of fat.

MAKE HASTE SLOWLY.

A cow should never be driven faster than a comfortable walk.

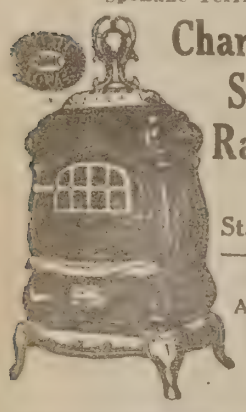
SPOKANE, SEATTLE.

WHERE LIFE *is* REAL



Comfort and cheer *make* a home

Charter Oaks make comfort and good cheer. Whether to warm the house against the blasts of winter or to cook the meals which thrice every day unite the family in one of home's strongest ties, a Charter Oak is a radiant center of comfort and well-being in hundreds of thousands of homes today.

So it has been since 1848 — seventy-four long years, the lifetime of your grandfather. And through every year of that time Charter Oaks have served with economy of fuel, labor, and expense. Any Charter Oak is easy and inexpensive to operate, dependable and long-lived in service.

Hear what the nearest Charter Oak dealer can tell you about saving money on fuel.

CHARTER OAK

Ten-Acre Farm

Enough to Keep One Man Busy

R. J. Dowling claims to have one of the oldest loganberry patches in the vicinity of Vashon, King county. While the patch is only one-half acre in size it has been producing for the last 15 years, and is still in fine shape. The crop is located in a slight ravine, which is sometimes flooded during a period of heavy rains. For this reason the dirt is thrown toward the roots when the patch is plowed late in the fall.

"While the patch has received very little fertilizer it produced 117 crates last year," said Mr. Dowling. "I have always tried to keep the patch free from weeds, which necessitates hoeing out the rows by hand. In this way there is less danger from insect pests. There are, however, a few cane borers, but their presence can usually be detected and the cane removed at the time the vines are trailed on the wires.

"Our logans and blackberries are only a side line, since we keep approximately 600 White Leghorn hens the year round as the main enterprise. We also have a few apple trees, consisting of Kings and Baldwins. These, however, are not a paying crop, and we may grub a part of them out to afford more room for kale and pasture for the cows and horses. We have but 10 acres, but there is enough work here to keep one man busy, especially if he spends the greater part of the day looking after the hens."

Says Pests Are Encouraged

To the Editor of The Washington Farmer: As a practical fruit grower whose experience has been nearly equally divided between the continents of Europe and North America, I would like to make a few observations regarding fruit culture in Washington as I have seen it myself in the last few months.

We hear a great deal these days about the large numbers of "wormy" apples this year, but is it not a fact that that which a man soweth that shall he also reap. I mean by that that farmers in the Yakima valley are deliberately cultivating these noxious pests. I visited many orchards during my stay in the vicinity and as may be supposed, they varied considerably. In the Selah district orchards were on the whole in fair condition, but in the lower valley, conditions were appalling. I visited one farm in particular of over 200 acres and after making a very careful study of the way in which the ranch, as a whole, was managed, or mismanaged, I arrived at the conclusion that the owner was not getting more than 40 per cent of the possible returns.

Weeds everywhere and no attempt made to control, or even cut them before picking time. Large tracts, acres in extent given over entirely to noxious weeds, when should have been growing fodder crops for hogs and cattle which are necessary adjuncts to every ranch of this size; irrigation entirely lacking in method, varieties and scrub trees whose fruit was never gathered abounded by the hundreds, trees were white with woolly aphis, acres of apples were never gathered, as they were 100 per cent "wormy," wormy fruit lying on the ground three or four deep, each fruit containing one or more worms soon to emerge and assume the pupa state and of course ascend the near-by trees. Next spring a pretense of fighting this mighty army will be made, with what result we have already described. Lead arsenate is used by the ton, but in the first place it is of inferior quality (sold ready for use), also it is put on in a slovenly manner and at the wrong time.

The owner and his sons had been in the game for years and knew it all, one could not tell them a thing, but, oh! what a mess!

Of course, all growers are not like these, but Washington has too many such farmers and they are certainly no credit to the state. If these men and their pests could live unto themselves it would not be so bad, but unfortunately the innocent have to suffer with the guilty, such is the irony of fate. E. T. LAWRENCE.

Kirkland, Wash.

Need for Better Methods

"There is a need for better preparation of the soil for potato growing in Thurston county, and there seems to be more who are practicing such methods than has been done in the past," remarked T. S. Madden of the South Bay district of Thurston county. "There was a time when we planted our potatoes in the third furrow of the plow, and gave very little attention to them afterward, except an occasional cultivation and digging. Such methods, however, are past, but there is yet a need for better methods and the time will come when we will all grade our potatoes more carefully, and put out the quality that is desired by the consumers.

"If we grade our potatoes and sell only the kind that are most attractive to the buyers we will be better able to keep our money at home, rather than having it go to potato growers of other sections of the state. There is a desire on the part of the local merchants to buy home-grown products, provided they can get a good quality."

Mason County Blazes a Trail for Better Poultry

If Accredited Dairy Herds Are Desirable, Why Should Not the Poultry Be Backed by Known and Recorded Production, Health and Vigor?

By RALPH ERSKINE

POULTRYMEN of Washington are determined to build up their industry on a plane as high as that of any state in the Union. They have alreday gone far in this direction, but they are going farther. As evidence, witness the movement now under way, finding its first realization in Mason county in the establishment there of the state's first accredited hatchery.

An accredited hatchery! Well, why not? The accredited dairy herd, that is, a herd certified by state officials to be free from tuberculosis, has long been recognized by the general public and is considered a necessity for the production of high-class stock. Likewise, an accredited hatchery indicates one certified to hatch eggs from high-class foundation stock only. The plan, although new in the northwest, is deemed absolutely essential by experienced hatchery men if the unscrupulous chick dealer is to be competed with successfully.

Where There's a Will.

WHEN a number of representative poultrymen from all parts of the state mentioned the idea of accredited hatcheries last August at the Seattle poultrymen's meeting the majority decided there was no possibility of getting the plan started for the coming season. Hearing of this decision, the Mason county poultrymen were disappointed and decided to take the matter into their own hands and make the plan work, and to do it in time for the 1923 hatching season.

Their threats to take the initiative in this matter fell on laughing ears, and some were heard to remark that Mason county didn't have enough real poultrymen to start anything. But start it they did, and with such earnestness that they will have the honor of operating the first accredited hatchery in the state.

Will Use Only the Best.

THE first step was to secure the assistance of W. D. Buchanan, field specialist of the state college, to inspect the flocks to be used to supply eggs to the main hatching plant. In the meantime they wrote to reputable breeders for prices of the best cockerels from high-producing hens. Mr. Buchanan was asked to give his personal attention to the selection of these birds before the purchases were made. The inspection of the flocks took place November 6 and 7, when 1500 hens were handled. Mr. Buchanan took plenty of time for this work in order to make sure that everything was right and to eliminate any possibility of failure.

This is not a cooperative hatchery plan, but all eggs will be produced under similar conditions and they will all be from selected stock. Each breeder signs an agreement to sell his eggs to Mrs. Martha Jacobs who will operate the hatchery at Shelton, and sell day-old chicks to the members first, then to other poultrymen of the county, and outsiders who desire such stock. The plant will have a capacity of 45,000 eggs for the season.

The aim of the hatchery will be quality rather than quantity, and as a means to this end the 10 breeders have agreed to follow implicitly the rules adopted, which include the selection and care of the hens and the selection of cockerels from trapnested dams.

Views of the Specialist.

Commenting on the possibilities of the new hatchery, Mr. Buchanan spoke very optimistically and encouraged the poultrymen to work for quality above all else, even if they were not to sell a chick to outsiders for the entire first season.

"These hens are not all of equal breeding value, neither are they all 200-egg birds," said Mr. Buchanan, referring to the hens selected. "They are purebred fowls, consisting of many mixed White Leghorn strains, the best that could be found in the county, and the cream of what the ranchers have been buying from many sources for years. They are

possessed of good vigor and stamina, and all weak birds have been carefully culled out. If taken by themselves without special care and mated to any kind of cockerels there would be very little, if any, gain accomplished.

"These selected pens, however, are to be mated to cockerels from trapnest dams of not less than 240-egg records. Seventy-eight of these cockerels were purchased from B. S. Hillier of Whatcom county and were personally selected by Mr. Buchanan. They are big, upstanding birds, with lots of life and ability to transmit their virtues to their daughters.

Breeders Formulate Rules and Regulations.

1. Fowls used for breeding must be in good, healthy condition, as judged by the inspector, and shall be culled according to the standards recommended and demonstrated by the extension service of the state college. All breeders shall then be examined by the inspectors.

2. Females are to be at least 18 months old. Eggs must average 24 ounces per dozen or better, with a minimum weight of 23 ounces

3. Males are to be approved by the inspector as to vigor and shall not be less than eight months old. In addition, males shall have a trapnest pedigree on the side of the dam of 240 eggs or more. The breeding ratio shall be six cockerels per 100 hens, or as nearly this as the size of the flock will permit.

4. No artificial lighting shall be permitted within three months of the breeding season and none shall be permitted during the breeding season prior to 6 a. m. or later than 6 p. m.

5. Breeders shall have the privilege of runs from November first to the end of the breeding season.

6. Eggs are to be delivered within seven days and precautions taken to prevent chilling or overheating. No washed eggs shall be used.

7. Eggs must be uniform in size, color, shape and shell texture.

8. Ample supply of greens must be fed birds used as breeders.

9. Grain must constitute at least 50 per cent of total amount of grain and mash fed. Where birds are fed in houses, litter must be reasonably clean, dry and loose.

This hen did not use a basket to lay her eggs in; neither are these the exact eggs she laid. But in quantity the eggs in the basket represent her year's production—33 pounds. Accredited hatcheries like that planned by Mason county poultry men should tend to make high producers more common and "boarders" less common.

An Important Beginning.

THIS is really the first step toward the first accredited hatchery of the state. It may seem like a small beginning, but it is one of the most important steps ever taken by any county in the state in any line of agriculture. It is not merely the use of purebred sires, but of known high records bred to high-class females, not trapnested, but carefully selected for production and vigor. And the big thing is that in Mason county, outside of a few small farm flocks, there will not be a chicken used of any but the most carefully selectd birds.

"Next year the selection of the females will be a little easier, since no pullets are to be used in this hatchery, and it will be two years before highly improved females can be used in the breeding flock. This year's pullets should show increased egg production and when the best of them are selected for breeders the progress should be rapid.

"H. E. Drew, county agricultural agent, has been the real genius behind the movement from the beginning. He saw the poultrymen of his county losing ground because they were buying stock of uncertain quality from outside sources. He brought the people to see that they could never succeed in that way. He helped them and led them in planning their work, and kept them at it when they showed a disposition to be discouraged. He even located and negotiated the purchase of the cockerels to be used."

Orders Already Received.

AN ineresting feature of this movement is indicated by the fact a county agent of another county in the state looking out for his own poultrymen, offered to take the entire output of the Mason county hatchery, only to be told that they expected to serve themselves first. This is as it should be, but it indicates that there will be no trouble in selling chicks when it is known that they have something back of them.

Whatcom Wants Second One.

Only two accredited hatcheries can be started this year, as the state college does not have the money or the men to supervise the work in the entire state. If others are started the poultrymen or the state, or both, must furnish money to cover cost of inspection and supervision. The poultrymen of Whatcom county, always on the job, and always looking for something better, have bid for the second accredited hatchery in a circle of accredited hatcheries and the poultry specialist has agreed to give them four days for inspection and organization work. The county agent, H. B. Carroll Jr., will assist with the second inspection, and the poultrymen are raising a fund for any additional inspection required.

The names of those who will furnish eggs to the Mason county hatchery are: J. T. Leigel, Shelton; August Engdahl, Shelton; Vearl Bennett, Shelton; Mrs. E. P. McClure, Shelton, H. E. Lopo, Shelton; Clyde Jones, Shelton; E. H. Church, route 1, Shelton; R. D. Haskell, Harstine Island; Alvin Peterson, route 2, Shelton, and L. H. Jacobs, Kamilche.

Pre-Cooling May Enable Washington to Supply East With Fresh Berries

Had you been in Boston last July you would doubtless have been pleasantly surprised to have seen on display fresh Cuthbert raspberries from the Puget sound district of your home state. This car of soft fruit from the Washington Berry Growers' association at Sumner was a trial shipment to ascertain the feasibility of shipping from coast to coast by means of a new pre-cooling method.

The fact that the berries arrived in excellent condition indicated a possible new market for fruit in this section and may have a great tendency to take a big percentage of fresh fruit from the already glutted western market.

Although pre-cooling has been practiced by berry shippers in order to lower the temperature of the fruit before it starts its long journey in refrigerator cars, the distance of shipment has been limited to such points as the Dakotas, Colorado and other markets of the same radius.

As a means of better refrigeration the Washington Berry Growers' association at Sumner has succeeded in pre-cooling their berries before they go into the cars with such perfection that the Boston market was reached last season with remarkable success. But the most encouraging part of the story lies in the news that our fruit reaches such points when their berries are out of season and the trade is finding that we have a berry with a better flavor than their own product.

The first shipment of this kind was made in the 1921 season by the same association, under the direction of F. H. Krugg, the manager. The destination of the car was Chicago, but due to some mistake it was not spotted and examined until two days after its arrival. The condition of the fruit was none the worse for the delay and it was clearly seen that, with the extra two days, the Atlantic coast could easily be reached.

When the 1922 season's crop came on it was in a poorer condition for shipping, due to the extreme short season, which caused an undue softness of the fruit. Nevertheless the shipment was made, with the above result. In an ordinary season it is believed that a large percentage of the crop from the association members can be directed to such points as have never been reached before and thus relieve the local markets.

"Since it is from the fresh fruits that our best prices are received, it is self-evident that we have got to put our crop out to these markets and make them realize that we have a superior product which can be placed before them when their own fruits are past," said Mr. Krugg. "If we don't take advantage of these new markets within the next few years it will only be a question of time when some other berry district will be supplying them.

"We can not afford to sell any of our first-class fruit to the canneries and yet we can not hope to sell it on the local markets because the small growers are already supplying this trade to the detriment of prices. It, therefore, behooves us to create this new market and furnish them with berries each year in order to hold their trade. If we start such a market we should plan to feed it every year in order to hold it.

"The only complaint we have had from the consumers at these points is the fact that our fruit does not have the color that is so pronounced in the fruit grown in their own district. This was due partly to our off season and the difference in varieties. When our berries had once been tried they wanted more of them. One dealer informed us that he could easily use one car of berries a day next year.

"In order to handle these markets to the best advantage the whole district should be under one head and operated as one body," continued Mr. Krugg. "In this way a greater tonnage could be depended on and the prices for local consumption could be better regulated. Such a plan would eliminate any competition between groups and all growers could receive the benefits any new markets secured."

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Let Us Look Before We Leap

We are in cordial accord with the demand of the farm bloc for lower freight rates on agricultural commodities, but we want to be sure that in casting around for a remedy the mistake is not made of changing the law so that the result will be higher rather than lower rates.

It is understood that the farm bloc want to repeal section 15-A of the law. But Senator Cummins of Iowa, who is one of the fathers of railroad regulation, tells the public that repeal of that section would not result in lower freight rates, but would make for higher rates. Senator Cummins' explanation seems reasonable. He says:

> The only new thing in the railroad act of 1920 was the decision to have the rate of return to the railroads fixed on the average value of the carriers within certain large groups, or as a whole. This meant that the interstate commerce commission, in fixing freight rates, would permit a fair return on the carriers thus grouped, as if one company owned the whole system. Previously rates had to be fixed which would afford a fair return to the lines which had the highest costs of cooperation. Inasmuch as the rates in effect now are based upon the average value, it is plain that the repeal of this basis would result in higher and not lower rates.

This seems especially applicable to the Pacific northwest, where the Chicago, Milwaukee & St. Paul road, a high-cost system, is in competition with the Northern Pacific, the Great Northern and the Union Pacific, all low-cost systems. If Senator Cummins' understanding of the law is correct, repeal of section 15-A of the Esch-Cummins law would throw the interstate commerce commission back on the old basis of rate-making. Under the old law that body would be required to approve rates that would permit the Chicago, Milwaukee & St. Paul to earn a fair and reasonable return on its investment. But the same basis of rate-making would have to be given to the other systems, and the result would be that rates high enough to let the Chicago, Milwaukee & St. Paul earn 5 or 6 per cent would permit the other systems of this region to earn anywhere from 10 to 20 per cent.

It is also well to keep in mind the fact that the recent victory won before the interstate commerce commission by the wool growers of the west was based on the Esch-Cummins law, and in all probability if that law had not been enacted the decision would have gone against the wool growers.

It would be strange if the Esch-Cummins law were altogether perfect. In all probability it needs amendment here and there. But the agricultural interests, particularly the farmers of the west, should demand that their representatives in the senate and the house be sure that in tinkering with the law they do not injure the very interests they are desiring to benefit.

Be Fair to the Housewife

A water-supply system is no longer considered a luxury, but rather a necessity and an interest-paying investment. The farmer can no longer afford to do his farm work with the equipment of a hundred years ago, for with modern machines and appliances he can do his work much better and more quickly. Is it right, then, that his partner in business, even though she be willing to do so, should be expected to do her part in the house with the limited equipment of the past? She certainly should not have to carry from the well the water for all household purposes. With but a part of the money expended for farming equipment a water system might be purchased and installed which, at a single stroke, would eliminate one of the greatest burdens of many farm women. With the system in operation, it will be found that not only is much arduous labor saved, but also the work of the home is done much more quickly.

The water used in homes having a complete system of running water averages between 20 and 30 gallons a day per person, while the use in homes where all water must be carried by hand averages but from six to eight gallons daily for each person. Easier work and improved sanitary conditions result from this increased water consumption. The time taken to install a water system is not great; the expense is not excessive; and the work of the installation is such that almost any man can do it himself. Then why is it that on far too many farms water is still carried in by hand—often by the housewife?—A Cornell University Bulletin.

Regional Cooperation

Another step has been taken in the direction of regional cooperation of state agricultural colleges and experiment stations.

The report comes from the yearly conference of the agricultural colleges of the country, this year held at Washington, D. C., that the men representing the four colleges of North and South Dakota, Minnesota and Montana have agreed to cooperate, especially on the questions of finance, grain grading, farm management and general marketing problems.

Regional directors of agriculture could put the punch into these cooperative efforts.

LOOKING INTO OTHER FARM FIELDS

The yield per acre of the wheat crop of Germany is estimated at 18.5 bushels this year instead of 32.4 last year.

* * *

California citrus fruit growers paid railroads a total of nearly $25,000,000 for freight and refrigeration in moving a crop of fruit which brought approximately $96,000,000 for the season ended October 31, 1922.

* * *

As a result of increased commerce between Australia and the mother country, a western Australian syndicate has been formed which will build eight new freight and fruit ships to operate between London and Australia.

* * *

Texas cotton growers expect to be enriched at least $400,000,000 as a result of the high prices now being paid for their product. Texas production is likely to exceed 3,000,000 bales. The prosperity of the planters already has been reflected in increased buying.

* * *

The New South Wales parliament has confined the agreement with the imperial British government and the governments of the Australian commonwealth and the New South Wales, by which 6000 British settlers will be placed on land in the New South Wales commonwealth at a cost of about 6,000,000 pounds, or about $30,000,000. The New South Wales commonwealth and the imperial governments each bear one-third of the cost, the imperial government to provide the $30,000,000 in the first place.

* * *

The 2-cent postage stamp now will carry a 1-cent letter to any postoffice in half a hundred foreign countries, in addition to any one of the more than 50,000 postoffices in the United States and the American possessions overseas. These countries now include Alaska Anguilla, Antigua, Argentina, Bahama islands, Barbuda, Bardos, Bermuda, Bolivia, Bon Ayre, Brazil, British Guiana, British Honduras, British Virgin islands, Canada, canal zone, Colombia, Costa Rica, Cuba, Curacao, Dominica, Dominican republic, Dutch West Indies, Ecuador, England, Grenada, The Grenadines; Guam, Hatti, Hawaii, Honduras, Ireland, Jamaica, Leeward islands, Martinque, Mexico, Montserrat, Nevis, Newfoundland, Nicaraguei, New Zealand, Panama, Peru, Philippines, Porto Rico, Redonda, St. Kitts; Shanghai, China; St. Vincent, St. Lucia, Scotland, Tobago, Tutuilla, Samoa, Trinidad, Virgin islands of United States Western Samoa, Windward islands.

State Farm News

J. C. Scott, president of the Taxpayers' league, reports 23 to 33 per cent reduction in taxes in Walla Walla in two years.

* * *

The latest estimate of Yakima's apple crop is about 10,500 cars, of which 3500 cars have gone to market. This total is 2000 cars less than that of the 1921 crop.

* * *

Superintendent L. M. Dimmitt of the Eatonville public schools, in Pierce county, has arranged to give a "dull season" course in auto and tractor mechanics. It will include shop work or the actual taking down and setting up of the machines and some related theory and science.

* * *

Mr. and Mrs. N. C. Sears of Winlock have bought the S. Strandos farm and will take possession immediately. The farm contains 40 acres and some small buildings which will be torn down to make place for a modern residence, dairy barn and several sheds and outhouses. This place adjoins a 40-acre trast on the wect which is also owned by Mr. and Mrs. Sears.

* * *

The Granger irrigation district, in the Yakima valley, has voted to accept the contract tendered the district by the United States reclamation service. This clears the way for the construction of the distributing system on a new unit of the Sunnyside project. About $225,000 will be spent in conveying water to 1500 acres of land lying east of Granger along Snipe's mountain.

* * *

There is a possibility that there will be no fair at Walla Walla next year. The fair association is $8500 in debt and Secretary Harry Paxton, predicting that no new set of directors would undertake to put on a show under this handicap, suggested that the property be either sold or mortgaged. The call for the annual meeting of the association failed to bring out a quorum of the old board.

* * *

Considerable new land is being cleared in the White Salmon district for the planting of pears next year. The Mount Adams farm, controlling one of the largest chains of orchards, is pulling out practically all of its bearing-apple tree fillers in one of its 40?-acre tracts to make way for commercial pears. This company shipped between 30 and 40 carloads of high grade pears to eastern markets during the fall.

* * *

More than $37,000 worth of fruit by-products were manufactured in various plants in the north central Washington district in 1921-22, according to figures compiled by District Horticultural Inspector Frank C. Nielsen. In excess of 21,000 tons of fruit of various kinds was used. In addition 432 cars of apples were shipped in 1921 to by-products factories outside the district. The average price received for apples was $8 a ton.

* * *

The Chelan county pomona grange has elected the following officers: Master, H. I. Shotwell; overseer, W. W. Mufley; lecturer, Mrs. V. Farmwald; steward, C. O. Zimmerman; chaplain, E. A. Ferrin; treasurer, L. D. Merritt; secretary, C. A. Ferrin; gatekeeper, E. T. Balch; Ceres, Mrs. E. T. Balch; Pomona, Mrs. Bessie Anvil; Flora, Mary Cornell; lady assistant steward, Nolia Compton; member of executive board, Ivan Compton; pianist, Mr. C. P. Butler.

* * *

The Cowlitz pomona grange has elected the following officers: R. H. Mitchell, Woodland, master; E. W. Robinson, Woodland, overseer; Mrs. R. H. Mitchell, lecturer; Mrs. Alice Doble, Carrolls, chaplain; C. Ballhorn, Woodland, steward; Annie Lawyer, Woodland, secretary-treasurer; Ernest Doble, Carrolls, assitant steward; Mrs. J. P. Nicholson, Kalama, lady assistant steward; J. P. Nicholson, gatekeeper; Mrs. F. M. Lane, Pomona; Mrs. E. W. Robinson, Ceres, and Mrs. Hanson, Flora.

* * *

At the closing session of the Grays Harbor county poultry institute, held in Montesano, it was decided to establish a certified chick hatchery for the county. If possible this is to be ready for the 1923 season. It will be along similar lines to the Mason county hatchery, established this year.

It was also decided to establish one or two demonstration brooders and to remodel one old brooder house. Twenty poultrymen agreed to keep exact records of their brooding and thus be able to report their progress.

* * *

A. Z. Smith, a graduate of the state college, has been appointed county agent of Snohomish county, with headquarters in the federal building in Everett. Mr. Smith has been doing extension work in New Mexico for the last five years, and once operated a wheat farm in Whitman county. His appointment succeeds William D. Love, who leaves his work in Snohomish county to take up a position as relief county agent. Mr. Love will work in any county temporarily where there may be a vacancy due to a vacation or leave of absence on the part of the regular county agent.

* * *

Merton C. Lane, assistant United States entomologist, gave an address at Ritzville recently on agriculture and insects. His talk was confined to wire worms. He classified them into two kinds—the true and the false. The former works in March, April and May and feeds upon green sprouts and winters under the frost line. The other kind are larger and feed upon dry grain and follow along the drill rows and are more destructive.

Mr. Lane suggested that the most feasible way of ridding the country of these pests is by clean farming. He said that nature permitted but about one-third of the eggs to hatch and that farmers, by clean farming, could decrease the hatching of the remainder by 50 per cent.

Coming Events of Interest

Dec. 12-15—State horticultural association, Spokane.
Jan. 3—Northwest Poultry show, Seattle.
Jan. 8—Chelan Poultry show, Wenatchee.
Jan. 22-23—Washington wool growers, Spokane.
Jan. 24-26—National wool growers, Spokane.

The Cover Page Picture

There are a great many things that grow to advantage on land that is only partially cleared. This is the philosophy of Charles Meyers, who is shown working on his five-acre farm at Alderwood Manor, near Seattle. Mr. Meyers believes in getting returns from his soil while he is waiting for sufficient capital and sufficient time to clear away the big stumps.

FARM BUSINESS AND MARKETS OUTLOOK

Encouraging developments were not wanting in the business and trade situation last week. Slight easing in the labor situation as a result of cessation of outdoor work was reported, but with a prospect of practically full employment throughout the winter.

The car shortage on November 18 had declined about 12 per cent from the worst period, although car loadings remain the largest on record for this time of year. Mail order houses reported that November sales were 25 to 35 per cent larger than in the same month last year.

In spite of deplorable finances abroad and heavy purchases of grain and provisions, foreign exchanges held up well and sterling reached the highest level since July, 1919. Advances predominated over declines in markets for farm products.

Favorable legislation to provide farm credit and to stimulate exports of farm products began to look more probable.

Roger Babson, another of the business forecasters, has publicly expressed an optimistic view as to the outlook for 1923. Although the readjustment is not complete, Mr. Babson thinks that prospects for 1923 are bright for the following reasons:

Fundamental economic and social conditions have improved and furnish a basis for genuine prosperity.

Money conditions are sounder. Banks have strengthened their position, loans have been paid off and bank reserves are large enough to take care of much greater business expansion than has occurred without strain.

The agricultural situation from the standpoint of profits is the best it has been for three years.

Commodity conditions are favorable since inventories have been reduced, consumers are in position to buy, prices are more stable and fewer business failures are occurring.

The outstanding unfavorable conditions which must be corrected before complete prosperity can be attained as listed by Mr. Babson include surplus factory capacity (resulting from over-expansion during the war), the adverse labor situation and disturbing political and financial conditions abroad.

Farmers owning Liberty bonds will be interested in Babson's view that bonds generally will sell higher prices in 1923 than in 1922.

Cattle Market Weakens Again.

After a temporary upturn as a result of lighter receipts from the range and less pressure from short-fed and warmed-up cattle, the market has turned downward again, especially at Chicago, where the supply has been unusually heavy, due to shippers trying to get a free ride to the International. Steers gained 50 to 75 cents on the rise and cows and heifers nearly half that amount, but part of it has again been lost. Veal calves scored a pronounced upturn of 75 cents to $1.

The market remains in a vulnerable position and excessive runs will be punished. Furthermore, it will be a departure from past experience if the supply of short-feds is not heavy during January so that prices will do remarkably well to retain this level while the pressure is on.

Purchases of stocker and feeder cattle have fallen off about 25 per cent in the last six weeks, but are holding up quite as well as usual at this season. Prices are at practically the lowest point of the season. They are not apt to become cheaper with western range receipts dwindling rapidly.

Hog Market Dragging Again.

Hog prices recovered about 50 to 60 cents early last week, due to temporarily light receipts, but the supply has expanded once more and the market is draggy.

Domestic demand for hog meats and lard has been stimulated by lower prices and exports which have been running behind the corresponding period a year ago rather consistently have reversed the comparison of late.

New High in Lamb Market.

Lamb prices reached $15.50 at Chicago last week, a new high point for the season, as a result of the lightest run at seven markets since July. Eastern shippers were a prominent factor in forcing the advance. As the trend of receipts during December and January normally is downward, an advance to $16 or better will not occasion surprise. Demand for feeder lambs has fallen off about 35 per cent in the last six weeks, but receipts from the range are quite limited and buyers do not find it easy to supply their wants.

Heavy Wool Consumption.

In the first 10 months of 1922 approximately 644,000,000 pounds of wool were consumed by American mills compared with 524,000,000 pounds in the corresponding period of 1921, 526,000,000 pounds two years ago, 502,000,000 pounds three years ago and 656,000,000 pounds in 1918 when orders were a prominent factor.

Mills show resistance to further advances in prices, but values have not sagged. The London auction maintains the opening advance on medium and low cross-breeds, and Geelong, Wellington and South American markets are active and strong. The Texas wools have practically all been sold already, leaving very little wool in the hands of growers in the United States.

Wheat Consumption Above Average.

In the first 22 weeks of the crop years, primary receipts of wheat were 251,526,000 bushels compared with 262,348,000 bushels last year and a 10-year average of 223,440,000 bushels. In that period approximately 137,000,000 bushels were exported, compared with 181,145,000 bushels last year and a 10-year average of 83,246,000 bushels. Domestic distribution amounted to 98,871,000 bushels against 41,501,000 bushels last year and a 10-year average of 83,246,000 bushels. Thus far both domestic consumption and exports have been above the 10-year average and the increase in domestic demand as compared with last year has more than counterbalanced the decline in exports.

The wheat market is in an uncertain state with no definite trend. Primary receipts are holding up well, while the domestic milling demand has become dull, although mills are still grinding at a high rate on old orders.

Private reports show a loss of 8 to 10 per cent in the acreage of wheat and a conditino about 5 per cent below the average. The outlook as a whole is less favorable than last year.

Big rye sales have been made recently. Since the bulk of the big surplus has already been placed the market has a firm tone. The rye acreage also is less than last year and condition is lower, so that the outlook is for a much smaller crop, although there is plenty of time for great improvement.

Corn Disappearing Rapidly.

In the five weeks ending December 2, primary markets received 27,923,000 bushels against 19,938,000 bushels in the same period last year and a 10-year average of 21,767,000 bushels.

In the first 18 weeks of the oats crop year, a total of 101,019,000 bushels disappeared into consumptive channels against 62,811,000 bushels last year and a 10-year average of 139,820,000 bushels. The decline in distribution as compared with the 10-year average has been more than offset by a falling off in primary receipts in this period.

Cash Grain Markets.

The range of cash grain prices for the week ending December 6 was as follows:

Chicago—Wheat—No. 2 red, $1.28 1-2@1.31 1-2; No. 2 hard, $1.18 3-4@1.22. Corn—No. 2 mixed, 69 1-2@74 1-4c; No. 3, 69@72 3-4c; No. 2 yellow, 69 3-4@72 3-4c; No. 3, 68 1-2@73c; No. 2 white, 71@74 1-2c; No. 3, 69 1-4@73 3-4c. Oats—No. 2 white, 42 1-2@46 1-2c; No. 3, 42@45 1-2c; No. 4, 41@43 1-2c. Rye—83 1-2@85 1-2c. Barley—64@75c.

Clover Seed Receipts Heavy.

Receipts of red clover seed at Toledo, the principal market, totaled 8373 bags in November compared with 9825 bags in October and 5766 bags in November, 1921. Receipts of alsike were 458 bags against 1050 bags a year ago. Prices advanced slightly last week.

Chicago, per 100 pounds—Clover, $15@16; timothy, $6@6.75.

Toledo, per bushel—Clover, $13.55; timothy, $3.40.

Strong grain markets and a fair demand are supporting the feed market. Shipments of wheat feeds are rather heavy and offerings are increasing as production is above the average. Stocks of a few feeds are accumulating. Stocks of cottonseed meal and cake at mills are fairly generous, but of linseed meal are light.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $25.50; standard middlings, $24.50; flour middlings, $28.50; cottonseed meal, 36 per cent, $46.75; 43 per cent, $51; hominy feed, $30; gluten feed, $38.35; old process oil meal, $51.75; tankage, $65.

Hay Practically Steady.

Hay prices were practically steady last week, although alfalfa at Kansas City and prairie hay in the northwest eased slightly.

Prices per ton in carlots—Chicago—No. 1 timothy, $20@22; No. 2, $19@20; No. 3, $14@16; No. 1 light clover mixed, $19@20; No. 1 clover mixed, $18@19; No. 1 alfalfa, $24@26; upland prairie, $18@19; midland prairie, $16@17; rye straw, $13@14; oat and wheat straw, $10@12.

Egg Market Working Lower.

Egg prices recovered part of their loss after the first sharp break of the season, but the market has turned easy again and the trend seems to be downward. Consumptive demand is broad as the apparent disappearance of eggs from the four leading markets during November totaled 1,575,040 cases compared with 1,360,862 cases in the same month of 1921. Storage holdings remain large, although the reductions at the fuor leading markets during November was 29 per cent above the average for that month in the preceding four years.

Butter Prices Near the Top.

Butter prices at Chicago advanced further last week while eastern points held practically steady, putting the former out of line. In general, conditions indicate that further advances of any consequence are unlikely. Argentina butter also is said to be coming in this direction.

In spite of the reported decrease in consumption as a result of high prices, nearly as much butter disappeared from the four leading markets in November as in October. Based on the reserve at the four markets, storage holdings on December 1 in the entire United States wuold be slightly below 50,000,000 pounds, or the smallest ever reported on that date and only two-thirds of the average.

Prices on 92-score fresh butter on December 6 were: Chicago, 55 1-2c; New York, 54c; Boston, 53 1-2c; Philadelphia, 55c.

Cheese Market Higher.

Fllowing an advance of about 1 1-2c on country markets early last week, prices at distributing centers were higher with an active demand in the first two days. Later on, buying was confined mostly to supplying immediate needs and the speculative buying which has been prominent, disappeared. A steady tone is expected in the trade, although the dull period which usually lasts until about January 15 is at hand.

Prices for No. 1 American cheese on December 6 were: Chicago—Flats, 27@27 1-2c; Twins, 26@26 3-4c; S. Daisies, 27@27 1-2c; D. Daisies, 27@27 1-2c; Young Americas, 27@27 1-2c; Longhorns, 27@28c; Square Prints, 27 1-2@28c.

Fruits and Vegetables.

The market for northern white potatoes has been generally steady during the past week. Total shipments from producing sections are running about 4000 cars weekly which is practically normal for this season of the year. Unloads at the leading consuming markets have not fallen off so sharply as the car situation resulted in many delays in transit. During the next month the movemen should decline 25 to 50 per cent further so that some recovery from extremely low prices prevailing seems inevitable. That they will not go lower is quite certain. Sacked rurals, U. S. grade No. 1 are quoted at $1 to $1.10 per 100 pounds.

Apple shipments from producing districts declined about 60 per cent in the last six weeks, but arrivals at consuming markets are still rather heavy and storage stocks are being merchandised. Prices show little change. Extra fancy Northwestern Jonathans, large to medium, are quoted at $2 to $2.25 a box at Chicago.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Dec. 9.—Cattle—Choice steers, $6.25@6.75; medium to good steers, $5.75@6.25; fair to medium steers, $5.25@5.75; common to fair steers, $3.75@5.25; choice heifers, $4.50@4.75; medium to good cows and heifers, $3.50@4; common cows, $1.50@2; canners, $1.50@2; bulls, $3@4.25; choice feeders, $5@5.50; fair to good feeders, $4@5; choice dairy calves, $8@8.50; prime light calves, $8@8.50; medium light calves, $7.50@8; heavy calves, $4@7.

Hogs—Prime light, $9@9.25; smooth heavy, 250-300 pounds, $8@9; smooth heavy, 300 pounds up, $7.50@8; rough heavy, $6@7.50; fat pigs, $8.50@9; feeder pigs, $8.50@9; stags, subject to dockage, $4.50@6.

Sheep—East-of-mountain lambs, $10.50@12; choice valley lambs, $10.50@12; medium valley lambs, $9.50@10.50; common valley lambs, $8.50@9.50; cull lambs, 6.75@8.50; light yearlings, $9@9.50; light wethers, $7.50@8.50; heavy wethers, $7@7.50; ewes, $2@6.

SPOKANE, Dec. 9.—Cattle—Prime steers, $6.25@6.75; good to choice steers, $5.75@6.25; medium to good steers, $5@5.75; fair to medium steers, $4.50@5; common to fair steers, $3@4.50; choice cows and heifers, $4.50@5; good to choice cows and heifers, $3.75@4.50; medium to good cows and heifers, $3@3.75; fair to medium cows and heifers, $2.50@3.50; canners, $1@2.50; bulls, $2.75@4; light veal calves, $6.50@7.50; heavy veal calves, $3.50@5.

Hogs—Prime mixed, $9@9.50; medium, $8.50@9.50; heavies, $6@8.50; fat pigs, $8@8.75; stockers and feeders, $7.50@8.

Sheep—Prime lambs, $10.50@11; fair to medium, $9@10; yearlings, $7@8; wethers, $6.50@7.50; mutton ewes, $3@5.75; feeder lambs, $9@11.

The Grain Market.

PORTLAND, Ore., Dec. 9.—Wheat—Hard white, Bluestem, Bart, $1.48; soft white, $1.25; western white, $1.22; northern spring, $1.18; hard winter, western red, $1.16.

Grain futures: Wheat—Bluestem and Bart, December and January, $1.48; soft white, December, $1.25; January, $1.24; western white, December and January, $1.22; hard winter, western red, December and January, $1.16; northern spring, December and January, $1.18.

ODESSA, Wash., Dec. 9.—Bluestem and Bart, $1.43; Marquis, $1.09; Turkey red, $1.06; Jones Fife, $1.02.

LEWISTON, Idaho, Dec. 9.—Wheat—White, $1.03; red, $1.

DAVENPORT, Wash., Dec. 9.—Bluestem, $1.30; Marquis, $1; Gold Coin, $1.

RITZVILLE, Wash., Dec. 9.—Bart, $1.43; red, $1.05; Fife, $1.01.

Can Businessmen and Farmers Cooperate?

Probably the most significant action of the meeting of the state chamber of commerce at Tacoma last week was the decision of that body to select a committee from its membership to sit with a like committee of the state grange for the study of ways and means of improving farm conditions and general rural life. This action came following a stirring address by Master A. S. Goss of the state grange in which he laid down to the commercial organization a number of fundamentals if the farming industry and that of the state at large is to prosper. President N. B. Coffman of the state chamber announced that he would early appoint the committee with authority to make a thorough study and report back to the organization.

"The chambers of commerce have not worked in harmony with the farmers as they might have done," said Mr. Goss of the grange. "On the contrary, we can cite cases where certain members or whole groups have actually worked against our plans in order to further their own interests. There are cases, on the other hand, where individual farmers have acted dishonestly, but the grange as a body is ready at any time to work with any committee for the purpose of bettering the general condition of every one.

Must Improve Marketing.

"The depressed condition of agriculture is largely due to a lack of just such cooperation as can be had from the different bodies represented here. We have suffered from the losses sustained by inadequate marketing and we feel the need of a nationwide method of regulating markets. Such a plan would avoid many glutted markets and aid in a more equalized distribution of our products. The grange is ready to work 40 years for such an end as it did in helping to establish the rural free delivery system.

"If we can secure the cooperation of the state chambers of commerce and other well established organizations it will not require 40 years to do it. I would suggest that committees be appointed to work out some definite plan, and then all go down the line together and put it across.

"Credit is another important problem that needs attention. In one sense of the word the farmer has been using too much credit. During the war he was getting more and more into debt living off his capital. Agricultural credit is divided into three classes: Capital credit, which is based on land and improvement securities, is fairly well covered by the federal farm loan act. Production credit for the raising of crops is handled in an adequate manner by the banks. Marketing credit is almost entirely lacking. To function safely, credit should be on an automatic basis so that a man could get credit money to market his crops when he needs it and not have to be compelled to dump his wheat or other commodities onto the market when the prices are at the lowest ebb.

"The farmers are also in need of legislation to prohibit the sale or manufacture of butter and milk substitutes and we are ready to cooperate with any organization to help get such a bill through. There have been cases where business men have fought against such bills, saying that it would injure some of the industries.

Real Cooperation Essential.

"We have other suggestions for consideration and we are already working on them in our committees, but quicker action can be had if we can get the help of the business men. If we can succeed in putting agriculture on a business basis, where it will bring a fair return to the farmer, there will be no need to wonder why we are not getting more settlers. This and other minor problems will melt away when we meet the one great issue.

"There is certainly an opportunity for us all to work together for the good of every one and if we go about it in the proper spirit we can surely get results. But if we do attempt such a nuited effort let us endeavor to work for service and not merely for profit."

Eloquent Speeches Inadequate.

In a vigorous address on farm marketing J. A. Scollard, president of the United Dairy Associations of Washington, said that he spoke for 6000 dairymen, all of whom would willingly stand behind any legitimate movement to promote upbuilding of the state, but insisted that the business men of the state should in turn help solve the problems of the dairymen and other farm producers.

"I want to sanction Mr. Gross' statement that the business men of different localities have not always cooperated with the farmers, but in many cases they have worked against them," said Mr. Scollard. "They have made eloquent statements from time to time, but these are of no value unless they practice what they preach. Our first move toward better conditions should be the betterment of the rural situations. When the farmer prospers, other problems tend to solve themselves.

"It should be stated here that the farmer did not make a fortune during the war. Particularly was this true in the dairy districts of western Washington. The greatest number of them lived off of their capital and are still in great need of help of some kind if business conditions are to be improved.

"When the dairymen started to build plants for the manufacture of butter, cheese and condensed milk they began by putting up well equipped plants from which they could put out a high-quality product. This, they believed, was necessary if the organizations were to grow. They have succeeded by means of a united effort and have been able to raise the price paid to the producer. In doing this they also raised the price for the men who would not lift a hand to help in the movement.

"A total business of $11,000,000 was carried on this past year and we have paid for every pound of cream delivered. This is the second year the association has been doing business in the manufacture of dairy products and we have met all opposition from our competitors by keeping our products on the market everywhere.

"Foreign" Competition.

"The worst opposition that we have to fight is the coconut cow. Substitutes are riding on the reputation that has been built up by the dairymen. If the public wants coconut oil, why should they want it put up in the same manner as butter by giving it a milk flavor. Every pound of substitute butter kills the sale of a pound of real butter and the buyer is in reality knocking the dairymen.

"In December, 1921, one substitute dealer sold 193,000 pounds of one brand of substitute butter which, by the way, was made outside of the state. It would have taken 8000 cows to have produced an equal amount of real butter and it destroyed business equal to that of 800 dairy farmers.

"We have attempted to legislate against this business, but we found that some of the representatives from the best dairy counties voted against the bills, saying that they could not afford to kill certain industries in the cities. They overlooked the fact that the dairy industry in their own county represented four or five times the amount of capital of the certain industry mentioned."

Look for Community Benefit.

"One of the greatest evils in our economic system is the fact that the farmer is hit the first of all when depression comes," said W. B. Armstrong, former president of the Washington State Farm Bureau federation. "When the farmer's prosperity is impaired it affects every other industry. We should, therefore, go slow when considering any new move and apply this test: 'Will it benefit the community?'

"A few of us have concluded that we have got to have federal authority or the setting up of machinery which will distribute perishable products properly," he said. "We want machinery for doing for us what the packers claim cooperation is doing for them. But the packers are few, farmers are many. I think a federal body can be set up which could supervise distribution and prevent us from hurting each other. We ship now in the dark as to markets. We despoil each other of huge amounts by glutting markets. I think this state lost last year at least $2,000,000 by unwise marketing.

"This plan presupposes centers of distribution. It provides that no cars can roll to market without orders. Needs will be scientifically determined and filled. If dumping must be done, it would be done on the farm, so transportation would not be unnecessarily strained."

Getting Settlers.

While the meeting was called primarily for the purpose of discussing ways of inducing settlers to come to Washington, it took the form of a rural upbuilding session in view of the necessity of agricultural prosperity as a magnet for settlers. In his message to the meeting President Coffman of the state chamber said in part:

"In the last decade the increase in population of the state of Washington was only 214,000. Of that number 143,000 went to the cities and 71,000, or less than one-half as many, went to the country. During the same period the percentage of increase in population in Pacific coast states was as follows: California, 44.1; Idaho, 32.6; Utah, 20.4; Washington, 18.8, and Oregon, 16.4.

"In taking up consideration of this question of rural upbuilding, land settlement and farm betterment it must be recognized that it is a complex one. The way to its solution is not a plain and open road. There are endless bypaths. When followed to their conclusion many of them will end only in an entanglement of controversy.

Public Welfare at Stake.

"The agricultural problem has reached the stage where it is deeply affecting the general public welfare. The solution of its difficulties must not be left alone to the agricultural interests. There must not be an attitude of antagonism between farmers and those employed in other pursuits. It must be given sympathetic consideration, not only for the farmers' good, but for the general good. Steps looking toward its solution

(Continued on page twelve.)

Goes to the Heart of Farmer's Problem

President Harding's message to congress, delivered on December 8, went to the heart of the farmers' problems when he said that American agriculture "needs more than added credit facilities; that permanent and deserved agricultural good fortune depends on better and cheaper transportation."

Better and fairer credit facilities, better and cheaper transportation—these are the remedies that we have been stressing ever since the federal reserve board made the fatal and foolish mistake of tightening up on farm credits and deflating the prices of farm products at one ruthless puncture, instead of first curtailing credits in nonessential and less essential industries.

President Harding wisely proposes a plan of increased agricultural credits that will be distinct from the federal reserve board. The farmers of the United States are distrustful of the federal reserve board, a fact that seems to have prompted the president to propose as entirely practical a "division in the federal land banks to deal with production credits, with the limitations of time so adjusted to the farm turnover as the federal reserve system provides for the turnover in the manufacturing and mercantile world."

We have been advocating that for years, and the regret now is that it was not sooner adopted.

Another part of the message that is especially sound and constructive is the advice on closer connection of land and water transportation. It is true, as the president says, that the American people have put hundreds of millions of dollars into river and harbor improvements, and it is high time that we were reaping some benefits from that investment of public funds.

So far these improvements of harbors and rivers have benefited only that part of the population living on the waterways. Here in the Pacific northwest they have been positively injurious to that part of our population living away from the waterways, for the railroads have laid higher freight rates on the interior producers and consumers, to compensate them for losses incurred in the cutting of rail rates to meet water competition at the terminals.

The farm problems discussed by President Hardinv are so weighty that we pirnt herewith all that part of his message bearing on agriculture:

The railway strike accentuated the difficulty of the American farmer. The first distress of readjustment came to the farmer, and it will not be a readjustment fit to abide until he is relieved. The distress brought to the farmer does not affect him alone. Agricultural ill fortune is a national ill fortune.

The congress already has taken cognizance of the misfortune which precipitate deflation brought to the American agriculture. Your measures of relief and the reduction of the federal reserve discount rate undoubtedly saved the country from widespread disaster. The very proof of helpfulness already given is the strongest argument for the permanent establishment of widened credits, heretofore temporarily extended through the war finance corporation.

The farm loan bureau, which already has proven its usefulness through the federal land banks, may well have its powers enlarged to provide ample farm production credits as well as enlarged land credits. It is entirely practical to create a division in the federal land banks to deal with production credits, with the limitations of time so adjusted to the farm turnover as the federal reserve system provides for the turnover in the manufacturing and mercantile world. Special provision must be made for live stock production credits and the limit of land loans may be safely enlarged. Various measures are pending before you and the best judgment of congress ought to be expressed in a prompt enactment at the present session.

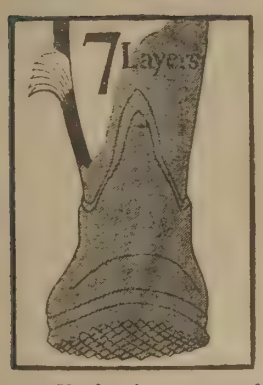
But American agriculture needs more than added credit facilities. The credits will help to solve the pressing problems growing out of war—inflated land values and the drastic deflation of three years ago, but permanent and deserved agricultural good fortune depends on better and cheaper transportation. Here is an outstanding problem demanding the most rigorous consideration of the congress and the country. * * *

In the last half of the year now closing the railways, broken in carrying capacity because of motive power and rolling stock out of order, though insistently declaring to the contrary, embargoed the farmer's shipments, or denied him cars when fortunate markets were calling. Too frequently transportation failed while perishable products were turning from possible profit to losses counted in tens of millions.

I know of no problem exceeding in importance this one of transportation. We have built 40 per cent of the world's railroad mileage, and yet find it inadequate to our present requirements. When we contemplate the inadequancy of today it is easy to believe that the next few decades will witness the paralysis of our transportation-using social scheme or a complete reorganization on some new basis.

Manifestly, we have need to begin on plans to coordinate all transportation facilities. We should more effectively connect up our rail lines with our carriers by sea. We ought to reap some benefit from the hundreds of millions expended on inland waterways, providing our capacity to utilize as well as expend. We ought to turn the motor truck into a railway feeder and distributor instead of a destroying competitor. * * *

This transportation problem can not be waived aside The demand for lowered costs on farm products and basic materials can not be ignored. Rates horizontally increased to meet increased outlays during the war inflation are not easily reduced. When some very moderate wage reductions were effected last summer there was a 5 per cent horizontal reduction in rates. I sought at that time, in a very informal way, to have the railroad managers go before the interstate commerce commission and agree to a heavier reduction on farm products and coal and other basic commodities and leave unchanged the freight tariffs which a very large portion of the traffic was able to bear. Neither the managers nor the commission saw fit to adopt the suggestion, so we had the horizontal reduction, too slight to be felt by the higher class cargoes and too little to benefit the heavy tonnage calling most loudly for relief.



Wins With String of Clydesdales

One of the greatest contests at the recent Pacific International Stock show at Portland was the six-horse hitch. With seven six-horse teams showing, Robert McCroskey of Garfield, Wash., brought the blue ribbon back to Washington. A. C. Ruby of Portland Ore., second and third. George Heyl of Washington, Ills., was judge and it is asserted by horsemen that this is one of the greatest shows of its kind assembled anywhere and that the Chicago International has never had as many as seven entries showing in the six-horse hitch. Mr. McCroskey won second in the four-horse hitch, with Mr. Ruby first, Floyd McKennon third, and seven entries. Mr. McCroskey won second also in the two-horse hitch, with Mr. Ruby first and with nine entries. Mr. McCroskey was the principal Washington exhibitor of horses, with a car of Clydesdales. He won second on aged stallion, first on 3-year-old, first aged mare, first, third and fourth on 4-year-old, first and second on 2-year-old and junior and reserve grand champion mare.

BACK OF THE HEEL—*Eleven layers of heavy duck and highest grade rubber make this one of the strongest points of the whole boot.*

THE ANKLE—*Here's where so many boots sag and crack. The "U. S." Boot has an extra "collar" that runs all the way round the leg, and on top of that is vulcanized a heavy side-stay.*

THE SOLE—*A thick, single layer of the finest, toughest high-grade rubber. Its flange shape means extra protection and wear. A rugged outside foxing unites the sole and the upper into one solid piece.*

THE INSTEP—*A boot has no lacing in front, like a shoe, to give as you walk. Every mile you go, the rubber bends and buckles 900 times. We've put a series of graduated reinforcing layers into the instep, combining unusual flexibility with surprising strength.*

Rugged strength at the 4 vital points

—that's why "U. S." Boots give such long wear

SOLE, ankle, instep, heel—it's at one of these 4 places boots get their hardest strain.

And weakness at any one of them will rob you of wear you ought to get!

The big reason for the remarkable strength, long wear and "stand up" qualities of "U. S." Boots is the fact that their makers have built into them at every one of these 4 vital points the strongest kind of reinforcements.

Made throughout of the finest quality of fabric and tough rubber, U. S. Boots are backed up at the "wearing points" by 7 to 11 *extra thicknesses*. And they're so built that all this extra wear is gained without losing the ease and flexibility you need.

The diagrams at the left will show you the details of the finest boot construction experts have yet been able to devise. 75 years of bootmaking experience are behind it.

Other "U. S." Footwear—all built to give the utmost service

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. lace Bootee, a rubber workshoe for spring and fall—U. S. Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." trademark—the honor mark of the oldest and largest rubber organization in the world.

Pig Survey

The United States department of agriculture began its second pig survey the first of this month. The survey made last spring, although covering only 17 states, was considered such a success that it has been decided to make these surveys twice a year hereafter, to cover the entire United States. Through the cooperation of the postoffice department the questionnaires will be distributed by rural mail carriers to 10 farms on each carrier's group. The cards or questionnaires will ask for the following information:

1. Total number of acres in farm.
2. Number of sows which farrowed during first six months of 1922.
3. Number of sows bred or intended to be bred to farrow during first six months of 1923.
4. Number of sows which have farrowed or are due to farrow during last six months of 1922.
5. Number of sows which farrowed during last six months of 1921.
6. Number of hogs which died from hog cholera or other diseases during 1922 to date, exclusive of young pigs which died at birth or shortly thereafter.
7. Number of hogs which died from cholera or other diseases in 1921, exclusive of young pigs which died at birth or died shortly thereafter.
8. Number saved per litter during last six months of 1921.
9. Number saved per litter during first six months of 1922.
10. Number saved per litter this fall to date.

Bran and Shorts

Which is the most economical, to feed potatoes at $15 a ton, mixed with good quantities clover and timothy hay and some ground oats, to dairy cows, or to feed bran and shorts at $30 a ton?

E. F. R.

Potatoes can not be compared with bran and shorts as a cow feed. The former is a succulent feed, high in starch, and the latter is a concentrate containing considerable protein with comparatively little starch (carbohydrate). As a supplement to timothy and clover hay, bran and shorts will produce much better results than potatoes. However, to make the best ration with these feeds I would suggest that all of them be fed as follows: All the hay the cows will clean up; from 15 to 20 pounds per day of potatoes and 1 pound of bran and shorts for each 3 1-2 pounds of milk produced. A little ground oats mixed with the bran will be beneficial.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

SWINE DISEASES. ARTICLE IV.

Internal Parasites.

It is commonly known that parasites inhabit the digestive tube of most of our domestic animals. In fact, this knowledge is so common that many regard it very lightly and seem to assume that such a condition is quite natural and do not get particularly interested until the animal begins to show visible effects of systemic robbing of vitality by these parasites.

Without doubt the most common internal parasite in swine is the roundworm. The adult is from 8 to 12 inches in length and the size of a small lead pencil in the middle portion, from which it tapers gradually toward either end. They are white or yellowish in color and frequently found in masses in the small intestine, which they fill quite completely, even to the extent that one may wonder how food materials got by the tangled mass.

Until comparatively recently we knew little about the life history of this parasite and then supposed that it lived a direct life, that is, that the eggs were passed by the feces of the host and after they developed to the infectious stage, with a small worm on the inside, they were taken in to the digestive tube by a susceptible animal, where they hatched and attached themselves to the wall of the intestine like their ancestors had done. Investigations of the last few years show that this simple life history is not correct and that this parasite is much more active within the body of the host than was at one time supposed, and that its effects are not confined to the intestine, as we assumed. When the ripe eggs are passed by the host they have to develop outside the body for a time before they become infectious, and under favorable conditions the time required is about 10 to 14 days. The eggs do not develop while the weather is intensely cold, nor during very dry periods of the year, but they wait until their surroundings are most favorable, a moderate temperature and certain amount of moisture, when they develop rapidly. Remember that these eggs do not die while the weather is warm or cold, but simply rest until the circumstances are more favorable for their development.

When they have reached the infectious stage and are given access to the digestive tract through the food or water they pass directly through the stomach to the small intestine, where they lose their shell, and the small worm is freed. At once it penetrates the wall of the small intestine and gets into the blood stream and is carried to the liver, through which it passes. It is picked up again on the other side, where it is taken to the lungs by the blood, and here is where the greatest damage is done. It is stopped by the small vessels in the lungs and the larva penetrates the lung tissue and reaches the windpipe. During its passage through the lungs the small worms do considerable damage as may be seen on the surface of the lungs of infected animals. Numerous small red spots and larger inflammed areas mark the places where the small worms have gone through and later on these may result in ulcers and diseased places, due to the infections that follow.

After the worms reach the windpipe they pass upward to the throat, where they appear to pass downward to the stomach again and to the intestine, where they attach themselves and stay during their adult age.

The amount of damage that these small worms may do is directly proportionate to the number that enter the body. If the numbers are small the damage is not great, but when large numbers pass through the damage to the lungs is very considerable.

(To be continued.)

WHY DOES A HOG SQUEAL?

The answer is simple—he's in trouble. If he is hungry, feed him and he will quit squealing. If he is cold, give him a good bed and he will snore as contently as a well-fed, well-bedded human being.

New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hot-water cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

(11)

LIGHT WEIGHT 4 H. P.

For all power jobs up to 6 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

Holstein Herd
Is Started at Prosser Station

A new Holstein herd is being started at the Prosser irrigation branch of the state college experiment station. R. P. Bean, superintendent of the station, expects to have a herd of from 20 to 25 purebred cows, which will be as many as can be handled conveniently at the station.

Seven new purebred animals have recently been received from the state college. They are from cows in the state college herd and have been sired by the Hulbert bull, a recent donation to the college from J. M. Hulbert of LaConner. The station already has one grade cow, and her grade heifer, which has been kept as a family cow for the herdsmen. The herd will be built up with the increase of this foundation stock. A young herd bull has recently been secured from the Todd herd at Yakima. This animal, Cascade Madcap Violet Fayne, is a son of Sir Korndyke Ormsby Piebe, the animal which Todd recently sold to an eastern breeder. The present plan is to use this sire until his daughters are ready for service, at which time he will be exchanged for one of the herd bulls at the state college.

"We plan to keep a small farm herd," said Mr. Bean, "and sell butterfat. We want enough skimmed milk to feed a bunch of pigs during the entire year. Only enough milk will be used on the farm as is necessary for the two families living there.

"Our present cow shed is a small portable building, which can be moved in sections if necessary. This, however, is used only at the present time, while the herd is small, and will later be used in some of the experimental feeding. We hope, however, to have a larger barn for the dairy herd before many years.

"The addition of this splendid herd to the experiment farm will afford an opportunity to carry on dairy feeding experiments in the future if considered necessary, and it will also be an outlet for some of the roughages produced on the farm. It will also afford an opportunity for exchanging herd sires from the state college as necessity demands. The herd will also serve as a demonstration of what can be done with dairy cattle on irrigated land."

Islands of Thrift

By F. RUINET.

Cathlamet and Puget islands, in the Columbia river, a part of Wahkiakum county, are peopled almost entirely by thrifty, hardworking Scandinavians. They form a rich agricultural producing territory, and in a very few years hence it will have developed immensely. There is a Scandinavian church and a fine schoolhouse on the island. Dikes permit one to travel round the island and bridges are built at convenient places in order to allow the crossing of the numerous sloughs.

It is a glad sight to see so many fine and well-built houses, painted and kept in splendid order. Fine large barns, all painted—not a gate off its hinges—everything is in order.

If the man is not on his farm he is busy repairing his landing stage, which is of no mean order. Planks out of place are readjusted at once—so as one travels from farm to farm he sees the care that is being constantly bestowed on the property. I was surprised to see such skillful attention being given to the land. The women folk and children, too, are a pride unto themselves.

The cattle on these islands are fine beasts—well nurtured and fed and housed. The markets for their produce are in Oregon. They are isolated from Washington, although they belong to this state. Some day a road will be in existence connecting Wahkiakum with its sister counties.

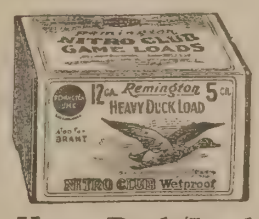
To Develop Beef Calves

The animal husbandry department of the state college recommends the following feed mixture for developing registered beef calves: Whole oats, 60 pounds; rolled wheat, 20 pounds; linseed oil meal, 10 pounds. When preparing calves for show this ration should be fed in a creep while the calves are still sucking, as well as after weaning. In the irrigated sections a pasture of blue grass, timothy and clover is recommended or an alfalfa or sweet clover pasture if in eastern Washington. Clover or natural pasture west of the Cascades is satisfactory.

EASY TO LEARN ABOUT BEES.

"Bees are so easy to raise and there is a wonderful opportunity for this industry in the Puget Sound district," remarked Miss Pearce of the Pearce & Dickenson Bee farm of Woodenville, King county. "There is no excuse for any farmer not having one or two stands of bees to furnish honey for his own table. It is true that every one does not understand the management of bees, but it is such an easy matter to get literature on the subject and learn to give them the best of care, which would take only a small amount of time from his regular work about the farm."

Remington Game Loads —Made to get the Game



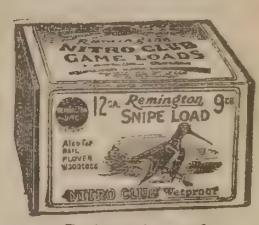
THE next time you buy shells—tell your dealer *what kind of game* you're going after.

He'll give you the new Game Load made specifically for that kind of game. The *right* kind of powder. The *right* amount. The *right* size and weight of shot.

The New Remington Game Loads—produced by Remington to make it easy for you to choose the proper load—and get the game. Furnished exclusively in "Nitro Club" Wetproof shells.

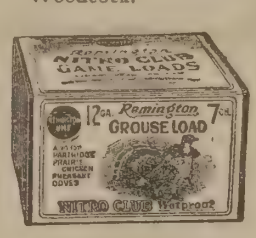
Duck Load
in 12, 16 and 20 gauge. Also for Pheasant

Heavy Duck Load
in 12 and 20 gauge. Also for Brant.



Brant Load
in 12 gauge. Also for Large Ducks.

Goose Load
in 12 gauge. Also for Fox, Turkey and Raccoon.



Quail Load
in 12, 16 and 20 gauge. Also for Doves and Woodcock.

Snipe Load
in 12, 16 and 20 gauge. Also for Rail, Plover and Woodcock.

Squirrel Load
in 12, 16 and 20 gauge. Also for Rabbit, Duck and Crow.

Grouse Load
in 12, 16 and 20 gauge. Also for Partridge, Prairie Chicken, Pheasant and Doves.

Dove Load
in 12 gauge. Also for Rail, Quail, Plover and Rabbit.

Rabbit Load
in 12, 16 and 20 gauge Also for Squirrel.

Trap Load
in 12 gauge.

Made in America and sold throughout the world

POULTRY AND RABBITS

Make the Hens Happy

The winter months are hard on the hens—even harder than the hot weather of midsummer. In summer it is possible to provide greater relief from excessive heat than it is relief from excessive cold and dampness in the winter time.

Chickens need dry quarters. The temperature is not nearly so important, though it stands to reason that excessive cold is harmful.

Many a farm poultry house is built with greater thought for warmth than for dryness. Many of them have floors on the ground or so close to the ground that they become damp if not actually wet from seepage or surface water. Many are built into a hillside, with the result that water from above, especially that which runs off the roof, finds its way under or onto the floor. Many have no floor at all, using the ground only. This is not to be condemned in itself, if a floored scratching place is provided. But if the ground becomes damp it is harmful.

Make the Hen Happy.

Where the house is floored, with the floor built up off the ground several inches or a foot or two, there should be adequate means of ventilation underneath it, so that dampness will not develop. It should not be open underneath at all times to such degree as to permit the floor being continually cold. If you find your hens standing on one foot with the other held up against the body, you may be certain that they are using up vitality combatting cold feet that should be used in the production of eggs. A hen must be happy to produce eggs, and cold feet do not engender cheer.

Dry Litter Important.

Do not let the litter in the scratching floor get damp. It is injurious, not only from the standpoint of the chilliness of it, but from its suitableness for the development of disease. Many poultry ills are traceable to filthy quarters. It is even better to have no litter in the scratching floor than to have a cold, damp, evil-smelling mass. There are few farmers so situated that they can not readily have a plentiful supply of fresh straw for use in the henhouse.

Clean Every Day.

While considering cleanliness, do not forget the dropping board. Droppings contain much moisture, and if allowed to accumulate under the roosts in winter become the source of a damp atmosphere and one anything but cleanly. Dropping boards should be cleaned even more regularly in winter than in summer, but in either case they should be cleaned every day. It is an excellent idea to sprinkle a little fine straw or chaff over them as soon as they are cleaned. This not only makes the roosts more cheerful and inviting for the hens, but makes the cleaning process much simpler. Where the droppings fall directly upon the boards nothing but a scrubbing brush can get them cleaned thoroughly, whereas, with the undercoating of chaff, much greater cleanliness is possible.

Pure Air Is Essential.

After all is said, ventilation is the great source of poultry house cleanliness. If a soggy, ill-smelling vapor strikes you in the face when you open the door in the morning, you may be certain that the ventilation is poor. You may likewise be certain that the energy of your hens is depleted just as your own energy is depleted when you sleep in a room without adequate fresh air.

Your poultry house should be so arranged that a wealth of wholesome air is available without drafts on the birds. Their roosts should be protected on three sides and above and below so that no air currents will strike them. The dropping boards should be tight; there should be no cracks in the walls; the roof should not be open directly above. But the fourth side may well be open to the air with only sufficient protection to keep a storm out.

Use Plenty of Glass.

The winter season is one of little light at best. If the poultry house were built of glass it would not be excessively lighted. But how many farm houses do we see with only one or two little squares of window glass! Make sure that there is light coming into the poultry house from as many directions as possible—certainly from both rear and front. Light and air are the two fundamentals in sanitation, and sanitation is essential to success with hens.

Mate Geese in Fall

"Geese should be mated in the fall, since they require plenty of time and should be ready by the time the breeding season begins," according to Miss Agnes Brenner of of Tacoma, who has had several years' experience with Toulouse geese. October and November are good months to mate them, allowing two geese to one gander if the stock is over 1 year old. If younger they should be mated in pairs.

"In any case, it is essential to select vigorous stock and allow them plenty of range. They will do better with a small feeding of grain and supply an abundance of water. It is not necessary that they have water to swim in.

"Geese begin laying usually in February here on the Coast, and will lay about every 36 hours, or every other day, until they have laid about 15 eggs, then they will want to sit. Break them up and in about three days they will go back and lay another lot of eggs about the same in number as the first lot, and will try sitting again. Break them up again and they will lay some more and after they have laid the next lot of eggs it is well to allow them to sit.

"Any good sitting hen can be used to good advantage for hatching goose eggs and hens make splendid mothers for goslings. A nest made on the ground is most suitable, as they require much moisture. Line the nest well with straw and keep plenty of feed and water before the hen at all times. After the first two weeks it is wise to sprinkle and turn the eggs over every other day. The difficulties arise in getting your goslings out of the shells, but they seldom cause any trouble after once hatched."

GOOD SHELTER ESSENTIAL.

Hens must have good shelter the year around. Protection from storms and dampness must be given in the winter. Protection from excessive heat is absolutely essential to success in the summer time. The latter applies at night as well as in the day time. A hot, stuffy house is fatal to poultry success. Ventilation, both winter and summer, is absolutely essential.

AVOID WATERY RABBIT FEED.

Green vegetation of excessive water content is considered injurious to rabbits, or at least not as valuable as the more solid kinds of green stuff. Cabbage, while considered by many a highly desirable feed for rabbits, is by others considered objectionable because its water content is so high.

SMOKE-EM

"Smoke Em"
THE GUARANTEED ROUP CURE.
A scientific DRUGLESS CURE for roup, colds, canker, diptheria and chicken-pox.
A discovery of the world's best known home of registered Holsteins, Berkshires and Leghorn chickens. After losing thousands of dollars worth of our trapnested birds from roup, we were determined to discover a cure. Since discovering and using "SMOKE EM," for three years we have not lost a chicken from roup. SOLD UNDER A MONEY-BACK GUARANTEE. Thousands of testimonials. You owe it to yourself and to your poultry to write or wire us today for our large catalog fully describing this wonderful roup cure. The price is low. Dealers, we have a good proposition to offer you. THE H. M. SPARR BREEDING ESTATE, Dept. 57 F, Thurmont, Maryland.

No Excuse Now
For dingy film on teeth

A way has been found to combat film on teeth, and millions of people now use it.

A few years ago, nearly all teeth were coated more or less. Today those dingy coats are inexcusable. You can prove this by a pleasant ten-day test.

Film ruins teeth

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. Then it forms the basis of dingy coats which hide the teeth's natural luster.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

Thus most tooth troubles are now traced to film. No ordinary tooth paste effectively combats it. So, despite all care, tooth troubles have been constantly increasing, and glistening teeth were rare.

New methods now

Dental science has now found two effective film combatants. Their action is to curdle film and then harmlessly remove it. Years of careful tests have amply proved their efficiency.

A new-type tooth paste has been created, based on modern research. These two film combatants are embodied in it for daily application. The name of that tooth paste is Pepsodent.

Dental authorities the world over now endorse this method. Leading dentists everywhere are urging its adoption.

Other new effects

Pepsodent also multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise cling and form acids.

It multiplies the alkalinity of the saliva. That is there to neutralize acids which cause tooth decay.

Old-time tooth pastes, based on soap and chalk, had just opposite effects.

It polishes the teeth, so film adheres less easily.

Thus Pepsodent does, in five great ways, what never before was so successfully done.

Used the world over

Now careful people of fifty nations are using Pepsodent, largely by dental advice. You can see the results in lustrous teeth wherever you look today. To millions of people it has brought a new era in teeth cleaning.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

In one week you will realize that this method means new beauty, new protection for the teeth. Cut out the coupon now.

Pepsodent PAT. OFF. REG. U.S.
The New-Day Dentifrice

Now advised by leading dentists everywhere. Used by careful people of fifty nations. All druggists supply the large tubes.

Big Poultry Farm

L. C. Beals' poultry farm at Vashon has a capacity of 3500 White Leghorn birds. Trap nests are used in all houses and only the eggs from the 250-egg or better hens are used for the setting eggs, which are sent to all parts of the United States.

"Yes, we do hatch part of our eggs and sell a few day-old chicks," said Mr. Beals, "but we have many distant shipments to such points as Honolulu, southern California, states of the middle west and even to towns in Canada. For the longer distance shipments we have to resort to setting eggs because the purchaser can be assured of a high percentage of the eggs hatching and there will be but little, if any, mortality. The greater part of the eggs hatched in the large incubators are sold to near-by buyers or used to replace our own flock.

Identify by Wing Bands.

"As the chicks are taken from their compartments in the incubator they are numbered by means of a wing band placed around one foot until the chick is old enough to have the band fastened onto the wing. This band remains on the bird as a permanent means of identification. By checking back to the number corresponding to the one on the band the bird's sire and dam can be determined, as well as their production record. Pullets are given a brooder house to themselves at the age of 8 weeks and fed a good growing mash to build up a strong constitution.

"It is necessary to trapnest all pullets for one year before breeders can be selected from their number. This is to make sure that each breeder has a record of 250 eggs or better. When placed into the breeding pens they are given plenty of room, large runways with an abundance of green feed and enough cockerels to insure fertility of every egg. There are over 2000 pullets being trapnested this winter."

Selection of Males.

The period of selection of the males, however, is not so long, since they are ready for use at the approximate age of 1 year. When first segregated from the pullets they are placed in individual houses, which hold 60 birds each. There are 12 houses in all, with no fences between, and the birds are given unlimited range in order to insure health, vigor and vitality. They are placed in these houses at about 8 weeks of age, when they are old enough to be taken away from the brooders. Nothing is fed them except the growing mash and some grain, there being plenty of green stuff and insects to complete the ration.

Only the best male birds are placed here, since the poor typed individuals are either fattened for frys or caponized and fattened for winter use on the farm. One of the men working for Mr. Beals has found a good market for capons and fattens a number each year. While there is only a slight increase in the weight, the quality of meat is much better, and there very little more expense in the feeding.

As the breeding stock is selected for the breeding pens they are taken into a building with small compartments and selected for different orders. In most cases the pens are made up before being shipped, and only cockerels selected from stock as good or better than the females. Practically all stock on the Beals farm is of the Tancred strain.

For green feed Mr. Beals grows kale and mangels, the former being preferred, but it is advisable to play safe and have a supply of mangels on hand in case of a severe winter, which might kill off the kale.

The Beals poultry plant requires the help of four men regularly throughout the winter, and from five to six in the spring when the hatching and brooding is in full swing. All the buildings are the Shoup type and all work is done according to methods worked out by the Shoups at the western Washington experiment station at Puyallup.

Boys and Girls Win

One of three solid silver trophy cups presented at the Pacific International by the Institute of American Packers of Chicago for the best carlots of Shorthorn, Hereford and Angus steers was won by the Hercules Beef club (boys and girls) of Ellensburg and Mabton in open competition. This exploit is regarded as one of the most remarkable performed by club youngsters at the big show.

In addition to his other premiums James Coffield of Goldendale won a silver medal bearing the clover leaf emblem of club work offered by the American Institute of Packers of Chicago for the best bred fat Lincoln lamb shown in club classes. He also won first in the yearling and first in club lamb classes, long wool breeds, and fourth on fat lamb, all breeds competing.

Harvey Norris, also of Goldendale, won third on Poland China boar under 6 months and eighth on sow of the same age.

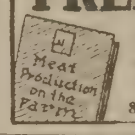
Washington club exhibitors from the Yakima valley dominated the class for fat steers, spayed or martin heifers, all breeds competing, in which $200 in prizes was offered. In the yearling class Harold Holmes of Mabton won first prize of $20 and Fred Schlien of Mabton and Eugene Wilson of Ellensburg were second and third, respectively. Other winnings by Washington exhibitors in this class were William Waldron Jr., Ellensburg, fifth; Nora Waite, Ellensburg, sixth; Walter White, Ellensburg, seventh; Chester Schlien, Mabton, eighth; Meta Bennett, Ellensburg, 10th; Ray Bennett, Ellensburg, 12th; James Gordon, Mabton, 14th.

David Nisbett of Chehalis was the only Washington club boy showing a dairy calf, and he won second in the senior calf class for Holsteins on Olmpic Greenbank Queen, which went to first place under W. A. Moscrip in the open class and brought $305 in the auction sale that followed.

Buying and Selling

H. C. Davis of Granger, in Yakima county, adds his testimony to that of others when he points out that things are badly out of joint when the prices at which the farmers must sell and the prices at which they must buy their supplies are considered. He declares that the farmers can not live when the things he buys cost three times as much as what he raises brings.

"Twelve years ago," said Mr. Davis, "I sold hay at $12.50 a ton and everybody knew I was not making any money. This year I sold at $13. Then I paid $1.25 a day for help and the men did 40 per cent more work than farm help did this summer at $3 a day.



"In 1910 I paid $1.75 a ton for baling, while now I pay $2.50. Then I paid 60 cents and 75 cents a ton for hauling hay to the cars and over dirt roads, not even graveled roads. Now, after being taxed for a concrete highway past my place—a road which is supposed to reduce the cost of hauling—I pay $1 a ton for hauling over the paved road. Taxes then were $2 an acre, while now they are $11."

In support of his contention Mr. Davis quotes from the October issue of the Weather, Crops and Markets, published by the United States department of agriculture, which "shows that taking the prices which obtained in 1913 as a basis, the purchasing power of the farmer's produce in September, 1922, was only 64 per cent of what it was in 1913, while the wholesale price of the commodities which he must buy was 170 per cent of the prices obtained in 1913."

Quick Way to Sugar Cure and Smoke Meat

SIMPLY pack meat in *Wright's Ham Pickle* and Salt. Then apply *Wright's Smoke* with brush or cloth. *Wright's Ham Pickle* sugar cures and flavors meat better. No trouble. *Wright's Smoke*, made from hickory smoke, gives delicious flavor. Quick—better than smoke-house. No shrinkage or loss. One bottle smokes a barrel of meat. *Wright's Smoke* and *Wright's Ham Pickle* cost little at any drug store. Fully guaranteed.

ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

Can Business Men and Farmers Cooperate?

(Continued from page six.)

must be made in concert with a shoulder to shoulder movement. The wholesaler, the retailer, the banker, the laborer and the manufacturer must be brought to realize that they can not long prosper unless agriculture prospers. The national administration and the congress have passed some permanent relief measures, and also provided some temporary ones to tide over conditions of acute distress. All these provisions are based on government aid in extending war-time credit facilities, or in refunding existing debts into long-time mortgage loans. They permit the farmers to borrow more and make terms of repayment easier. They create new and larger burdens. To aid to the increase of borrowings may be justified as an expedient. In the end, when payment is due it may prove calamitous rather than helpful. A farmer can hardly be regarded as getting on by going into debt. The real need is to decrease them. The ultimate objective in a movement for bettering farming conditions must be the insurance of fair and just rewards for thrift and industry.

"There are cures, no doubt, which can be wrought through legislation, but basic causes must be sought for deep down in the social and economic state of the country and of the world. The great war did what wars have always done. It caused vast inflation of credit and overstimulation of human effort. It brought on unbalanced production. It multiplied feverishly undertaken business ventures. Under this artificial stimulus prices mounted and soared. The cost of living doubled and trebled. Money was easy and extravagance multiplied. As resources were marked up to keep pace with rising prices liabilities were created in like proportion. The bubble burst in the summer of 1920. Prices fell precipitately. Resources could be marked down to meet the falling prices, but liabilities expressed in dollars could only be reduced by dollar payment.

Chattel Mortgages Multiply.

"The people of this country have gone mad in the overuse of credit and in borrowing. A decade ago a chattel mortgage was the last resort to secure a debt and a mark of disgrace and ruined credit. Now is it an overestimate to say that half the live stock and farm machinery in Washington are under chattel mortgages?

"The great danger now is the inclination to turn for relief to federal and state aid. Government aid is justifiable if undertaking for the general good, for benefits that will accrue to the whole people, but the extension of government aid to any class or industry tends to destroy the independence of that class and of that industry. It is paternalistic and against true American ideals of government. It fosters bureaucracy and emphasizes class distinctions. It tends to convert helpfulness, independence into dependence, self-reliance into supineness. It is a destroyer of individuality. Farmers should beware of the enticing allurement of federal and state aid and of government price fixing. They are delusions. They may tend to overturn our democratic form of government and substitute for it a bureaucracy.

Demand of Farmer Is Just.

"It is up to the farmers to make a fair fight for their rights and it is the duty of the rest of us to see that they get a square deal.

"The demand of farmers for an equalizing of prices and of opportunity for profits is a just one. The way to their attainment would seem to be in the direction of that which obtains in other lines of employment—cooperation, standing together for mutual help. Business methods on the farm, business methods in marketing. Standardization of methods and of products.

"A weeding out process is going on on the farm. Successful farming now requires expert training and standardized methods of business accounting. These, along with industry and good management and, above all, with cooperation in marketing, point the way, in part at least, to the cure of existing evils. More attention in my judgment must be given to specialization. Hit and miss methods can no longer succeed.

"The specialized farmer is, in fact, a manufacturer. To succeed he must adopt the methods of the manufacturer. He must look to the sale of his one product for his income, and his income must be sufficient to provide everything that is required for overhead and the family support, with satisfactory profits added. The cash outlay of the farmer is now on a par with that of the manufacturer, the merchant and the professional man. His net income for financial success must measure up to that of other callings.

Bees and Huckleberries.

"The field for specialized agriculture in this state can be greatly enlarged. We can well afford to give more careful consideration to such specialized pursuits as bee culture, growing filberts, grapes, cranberries, huckleberries, lettuce, celery and asparagus, as well as to vastly enlarge our already specialized agricultural products.

"Irrigated, reclaimed and cut-over lands carry with them a high pre-production cost. Their profitable utilization calls for intensive specialized production with cooperative marketing. When to these requirements there is added thrift and industry and an attractive social environment the Washington farm home will become attractive, enticing and satisfying, and will multiply."

Among other speakers were several state officers, including Commissioner E. L. French of the state department of agriculture, N. W. Durham of the Columbia basin committee of the Spokane Chamber of Commerce, Whitney L. Boise of the Portland Chamber of Commerce, W. W. Robertson of Yakima, Thomas B. Hill of the Seattle Chamber of Commerce and others.

Officers of the state chamber were elected as follows: N. B. Coffman, Chehalis, reelected president; C. L. Babcock, Olympia, and J. C. Hubbell, Ellensburg, vice president; F. D. Case, Wenatchee, reelected treasurer, and T. J. O'Connor reelected secretary.

Club Members Buy Purebreds

Members of the Hercules Baby Beef club of Mabton, Wash., purchased five purebred Shorthorn females at the Pacific International Shorthorn sale, thus laying the foundation for two more Yakima valley purebred cattle herds of the future. Harold Holmes and Gerald Varnum of Mabton were the enterprizing club members. Gerald purchased Red Rose B. from the Foothills farms, Carlton, Ore., and Miss Willow from the Oregon Agricultural college. Harold purchased Bessie Criterion from George Bertrand of Castle Rock, Wash.; Craigielea Coral from Foothills farms and Dainty Lady 2 from th Oregon Agricultural college.

Winter Work With Bees

"The wise beekeeper gets his spring supplies made up in the fall or winter, so that such details will not have to be looked after when the outside work is more pressing," declared W. L. Cox of Elma, who discussed the "honey harvest" at the bee schools held recently at Seattle and Puyallup. "There is practically no difference in the treatment for comb or extracted honey. In either case a three-inch foundation should be used, even when using the small frame for chunk honey. There is often a good demand for this kind of honey, and the bees like to work on the open frames better than on smaller combs.

"Old combs from which the honey has been extracted is good for placing back in the hive for the bees to refill for their own use.

"Every hive should receive attention during the honey flow and the completed combs removed as they are capped over. All honey, whether comb or extracted, should be stored in a warm, dry place.

"The new queen should be on hand before she is needed, so as not to lose any swams. The best time to requeen in the Puget sound district is in June or July, at the beginning of the honey flow. Some apiarists requeen every two years, but the colonies will be stronger if requeened every year."

OLYMPIC DRAINAGE DISTRICT.

Portland Chamber of Commerce excursionists who visited southwestern Washington in October were given a glimpse of Olympic drainage district No. 2, in which the approximate cost of the work done is $29,500 and the estimated increase in value of the land drained (650 acres) is $60 to $100 per acre. There are 940 acres in the district, which is on the Satsop river, and there is more land in Grays Harbor county subject to improvement by diking and drainage than in any other county of southwestern Washington.

Christmas Suggestions

GIVE HIM A BOX OF CIGARS OR CIGARETTES WRAPPED IN A HOLIDAY PACKAGE.

We have his favorite brands at 75c per box and up.

A pipe for 25c and up, or a humidor of pipe tobacco for 75c to $1.65, in a Xmas carton, also makes an excellent gift.

Xmas candy in bulk and boxes for 25c per lb. and up, or a subscription to any of the popular magazines will make the ideal present for her or any member of the family. Send us your order today.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

State Farm Bureau

Will Hold Annual Meeting at Walla Walla January 15

In accepting the resignation of W. B. Armstrong as state president of the farm bureau federation, the executive committee at Yakima unanimously passed a resolution "that a vote of thanks and confidence of the executive committee be extended to Mr. Armstrong for the valuable services he has rendered to the state farm bureau federation." Friendly feeling was shown throughout the three-day sessions to the retiring president.

Final sessions of the committee were taken up with plans for opening headquarters at Spokane and for the annual meeting at Walla Walla on January 15. J. D. Balmat, Spokane, and State Secretary W. H. Talley were authorized to select a location in Spokane.

The annual meeting at Walla Walla will be opened with a meeting of the state executive committee, followed by the regular meeting. Arrangements are in charge of Mr. Balmat, Edward Hugill, W. G. Cordiner and Secretary Talley. A motion was unanimously carried that the secretary be instructed to extend an invitation to the state grange and farmers' union to send fraternal delegates to the meeting at Walla Walla.

Elects Officers

Klickitat Livestock Association

The Klickitat County Better Live Stock association has elected officers for 1923 as follows: H. D. Roberls, president; George Garner, vice president; Kenneth Hinshaw, secretary-treasurer. The representative board of directors are George Garner, beef cattle; M. A. Smythe, dairy cattle; H. H. Hartley, sheep; W. D. Morris, swine; Earl Selle, poultry; William Hornibrook, horses, and Kenneth Hinshaw, junior club work.

The junior club is to be consolidated with the men's organization and the coaching and instruction necessary will be handled by a special director of the association. The club members will be admitted without fees, but must live up to a written agreement regarding admittance to the club. Every club boy will be required to take part in at least one program before the association. George Garner offers a registered Shorthorn calf to the best beef club worker. Dr. Hartley offers a registered Hampshire lamb for the champion sheep club work; Kenneth Hinshaw and Earl Selle offer a registered Berkshire pig to the champion pig club worker.

A year's program has been scheduled as follows:

January 8, organization; March 12, special poultry and sheep meeting; May 14, special dairy and beef cattle meeting; May (last week, live stock judging and demonstration tour; July 9, special feed and crop meeting; September 10, special fair meeting; October (third day of fair) annual meeting.

Can Not Ship Wormy Apples

That it is not within the powers of the state department of agriculture to permit the shipment of wormy apples is reiterated in a statement by C. L. Robinson, supervisor of horticulture, in the Monthly News Letter for November. Mr. Robinson says:

"Because a percentage larger than usual of apples have been injured by the codling moth in different parts of the state, applications have been made, over and over again, to the state department of agriculture to permit the shipment and sale of wormy apples. It is pointed out in these applications that there are states where these apples could be sold and bring a much higher price to the shipper than if he sold them to a byproduct plant. Therefore, the department is urged to permit such sales.

"These applicants have a very imperfect comprehension of the powers of the state department of agriculture. The prohibition against the shipment of diseased fruit or that infected with insect pests, is not a matter of departmental regulation. It is a part of the statute law of the state, a law, it may be stated, that was passed at the earnest request of the fruit growers of this state, who desired to maintain the high standard and high reputation of Washington fruit in the markets of other states. The reputation of Washington apples and their assets are of great value to our large fruit growers, and their interests demanded that the standards be maintained."

WINS WILDER PRIZE.

The American Pomological society at its convention recently held at Council Bluffs, Iowa, awarded the Wilder medal to the Rainier apple, according to a letter just received by the Washington Nursery company of Toppenish, Wash.

The Wilder medal is the Nobel prize of the fruit world. It was provided for by a trust fund left in 1886 by the late Marshall P. Wilder, scientist and pomologist, with instructions that it was to be awarded to a new fruit only after exhaustive investigation had produced proof of that fruit's supreme merit.

The Rainier apple originated in the Yakima valley.

To Sell Moleskins

Moles, which cause grief to gardeners by interference with plant roots, are being turned to good use, says a Yakima report. They are being captured and skinned by agents of the biological survey and their skins are being offered for sale by the government. Miss Edna M. Ladwig, county home demonstration agent, has a couple-of the mole skins, one tanned and one untanned. The tanned skins sell for 35 cents each and the untanned for 25 cents. She is taking them with her to the classes in millinery, as three of them make a handsome brim for a hat. They are also used in making collars and cuffs on suits and coats and in trimming dresses. They could be easily fashioned into scarfs or muffs, she says.

The skins are soft and a lovely shade of gray. They appeal to many women who for humanitarian reasons do not care to wear the skins of most animals which are trapped. The moles, having been classified with the pests, owing to their interference with agriculture, will have to go whether one opposes animal slaughter or not.

PAINT THINGS UP A BIT.

Do not paint when it is too cold, but make use of an occasional idle hour by painting up some of the machinery or implements while they are not being used.

Mail-o-Grams

By State College Specialists

Apiculture.

B. A. Slocum, specialist in apiculture, says: To assure straight combs and decrease the number of drones, use full sheets of either heavy or medium brood foundation in the brood frames.

Dairy.

Don G. Magruder, specialist in dairying, says: Use a dairy sire whose near relatives have an average production of at least 500 pounds of butterfat.

Farm Crops.

Leonard Hegnauer, specialist in crops and soils, says: This is a good time to scatter a little sweet clover seed on partially cleared land and on rough hills as an aid to next year's pasturage.

Farm Management.

R. N. Miller, farm management demonstrator, says: Keep exposed surfaces of farm machinery covered with a good paint, grease wearing surfaces and begin repairs, for there will be other work for March.

Home Management.

M. Minerva Lawrence, specialist in home management, says: Take an inventory of the working equipment in your kitchen and dispose of all useless pieces.

Horticulture.

M. D. Armstrong, specialist in horticulture, says: Now is a good time to go over the tools and orchard equipment for the needed repairs.

Please mention THE WASHINGTON FARMER when writing advertisers.

A Practical Reminder for Everyday Farmers

You know your farm like a book. Whether it covers 80 acres or 320 acres, you are perfectly familiar with every corner of every field. You know the lay and contents of the buildings that make up your homestead. With your eyes shut you can tally the livestock and all the items of farm equipment. To be well posted on these things is a matter of pride with you and a matter of careful management besides.

This policy could well be carried a step further. Profitable, economical farming is so largely a matter of modern, improved machines that every good farmer should keep posted also on the equipment on the market so that when occasion arises he may invest to the very best advantage by the purchase of new machines.

We are therefore printing here for your information the list of standard, reliable, most popular farm equipment—

THE McCORMICK-DEERING LINE *of* FARM OPERATING EQUIPMENT

Grain Binders	Corn Pickers	Spring-Tooth Harrows
Threshers	Corn Shellers	Peg-Tooth Harrows
Harvester-Threshers	Ensilage Cutters	Tractor Harrows
Headers	Huskers and Shredders	One-Horse Cultivators
Push Binders	Huskers and Silo Fillers	Culti-Packers
Mowers	Beet Seeders	Kerosene Engines
Hay Rakes	Beet Cultivators	Tractors
Tedders	Beet Pullers	Motor Trucks
Hay Loaders	Cotton Planters	Cream Separators
Side-Delivery Rakes	Grain Drills	Manure Spreaders
Sweep Rakes and Stackers	Lime Sowers	Stalk Cutters
Combined Side Rake and Tedder	Broadcast Seeders	Feed Grinders
Baling Presses	Tractor Plows	Stone Burr Mills
Corn Planters	Walking Plows	Cane Mills
Listers	Riding Plows	Potato Diggers
Corn Cultivators	Disk Harrows	Wagons
Corn Binders		Twine

This equipment is always available for you at the store of the McCormick-Deering dealer. In the list are many items for farming in winter—such as engines, various belt power machines, cream separators, motor trucks, etc. Make the McCormick-Deering dealer's store your headquarters. Use the service for which his establishment is famous. Write us direct for information on any of the above machines.

Proper Cultivation

Brings Success to Chris Turner

Another successful year has been recorded on the Chris Turner farm on Spanaway prairie, in Pierce county. Mr. Turner reports that in spite of one of the driest seasons ever known in the county he has been able to retain enough moisture for the growth of vegetables and small fruits, all of which have grown equally as well as if grown on some of the lower soils.

None of this land has ever been irrigated, since it is almost impractical, due to the type of soil and absence of a large head of water for this purpose. Mr. Turner, however, feels that cultivation at frequent intervals will prevent excessive evaporation and keep the soil at the right consistency for furnishing plant foods to the crops.

"It is my plan to cultivate just enough to create a good dust mulch and keep the soil in this condition all through the summer," explained Mr. Turner upon being asked how he was able to grow such large vegetables and grain crops. "It is an easy matter with the garden and other cultivated crops, and we plan on stirring the soil about every 10 days. With the grain crops it is different, and it is somewhat harder to regulate the moisture, although practically all of the grain seeded this year came through in excellent condition, although some of it was set back slightly by the dry weather."

One need only to see the large exhibit of vegetables, grains, grasses and fruits, which Mr. Turner arranged at the western Washington fair at Puyallup, to realize that he is getting excellent results from his upland farm.

Some of his best varieties grown on the upland are Iowa Goldmine and King Phillip. Both of these did very well and seemed to yield more than the Minnesota 13, which is commonly grown in western Washington. Brown Squarehead wheat has been found to be one of the best yielding grains. Tall oat and Italian rye grass mixed with red clover is recommended by Mr. Turner for a hay crop on the upland gravelly soils. Sunflowers also do well, are hardy plants and usually mature in good shape before frosts affect them.

For apples Mr. Turner recommends the Waxen, Winter Banana and Wagner. The Anjou and Winter Bartlett pears have been very promising, although other varieties do well. Mr. Turner also has about 30 different kinds of vegetables that produced good crops under his system of farming.

"There are too many of the farmers who have gone too far back into the timber and river valleys to take up their farms," according to Mr. Turner. "This prairie land has been passed up by homeseekers who were looking for a location in the early days." Mr. Turner expects to have one of the neatest farms in the county in a course of time, and two new buildings have been erected this summer to complete the farm plan.

Complete Dress Form Work

Miss E. Belle Alger, clothing specialist of the Washington State college, met the county clothing leaders in Yakima when it was decided to complete the dress form work which has been carried on in the valley for a couple of years. It is estimated by Miss Edna M. Ladwig, county home demonstration agent, that there are at least 1500 dress forms in the county at the present time.

Mrs. W. E. Blair of lower Naches was reelected county clothing leader at a recent meeting and Mrs. Percy Wickersham of Tieton county millinery leader.

Those attending the meeting were Miss Alger, Miss Ladwig, Mrs. A. W. Schwartze of South Nob Hill, Mrs. Rex Rudd of Summitview, Mrs. Will Smith of Mabton, Mrs. H. L. Lumpkin and Mrs. E. V. Rightmire of Cowiche, Mrs. Chester Miller of Fairview, Mrs. W. C. Kennedy and Mrs. W. D. Dodd of Harrah, Mrs. C. K. Sprong of Grandview, Mrs. P. L. Medaris of Parker, Mrs. H. S. Hawn of Wiley City, Mrs. Paul Engman of Selah, Mrs. J. A. Cadwallader of Tieton, Mrs H. G. Cowling of Rimrock, Mrs. George Maltby of Selah, Mrs. J. Stevens of Pomona, Mrs. Blair and Mrs. Wickersham.

Cooking Qualities of Potatoes

An interesting demonstration was put on to show the cooking qualities of three leading varieties of potatoes by Miss Ruth Kennedy, county home demonstration agent of Thurston county. The three varieties were the Burbank, White Star and Netted Gem. The time required for cooking each variety in three different ways was recorded as follows:

Burbank: Boiled, 36 minutes; baked, 1 hour; steamed, 50 minutes. White Star: Boiled, 34 minutes; baked, 1 hour; steamed, 38 minutes. Netted Gem: Boiled, 28 minutes; baked, 1 hour; steamed, 47 minutes. Gold Coin: Boiled, 22 minutes; baked, 45 minutes, and steamed, 35 minutes.

The last variety, the Gold Coin, was the only variety of round white potato shown. The three others are the long white type and are most desired for cooking purposes. The reason was plainly shown by the fact that the round white potato, although baking in a shorter time and proved to be a much more delicious variety for this purpose than any of the others, it did not boil or steam satisfactorily. In both cases it fell apart and cooked down into a mush, thus proving it to be a poor variety for general use in the home. There was very little difference in the time required for cooking the other three varieties, and all three proved to be a very good potato for general use. The difference in time, said Miss Kennedy, can not be taken as authentic for all samples of these varieties, but were merely what was found from this particular trial.

SKAMANIA GRANGE ELECTS.

A. E. Fitzgerald was chosen to head the Skamania county Pomona grange as master for the ensuing year, at the annual meeting November 22. Other principal officers are as follows: Overseer, E. L. Marble; steward, John Butler; chaplain, the Rev. Robert Harbutt; treasurer, O. J. Jansen; secretary, B. C. Loring; gatekeeper, Erick Larsen; Ceres, Lucy Butler; Pomona, Pearl Walker; Flora, Cora Fitzgerald; lady assistant steward, Ella Marble; executive committeeman, William Franzel.

American Foul Brood

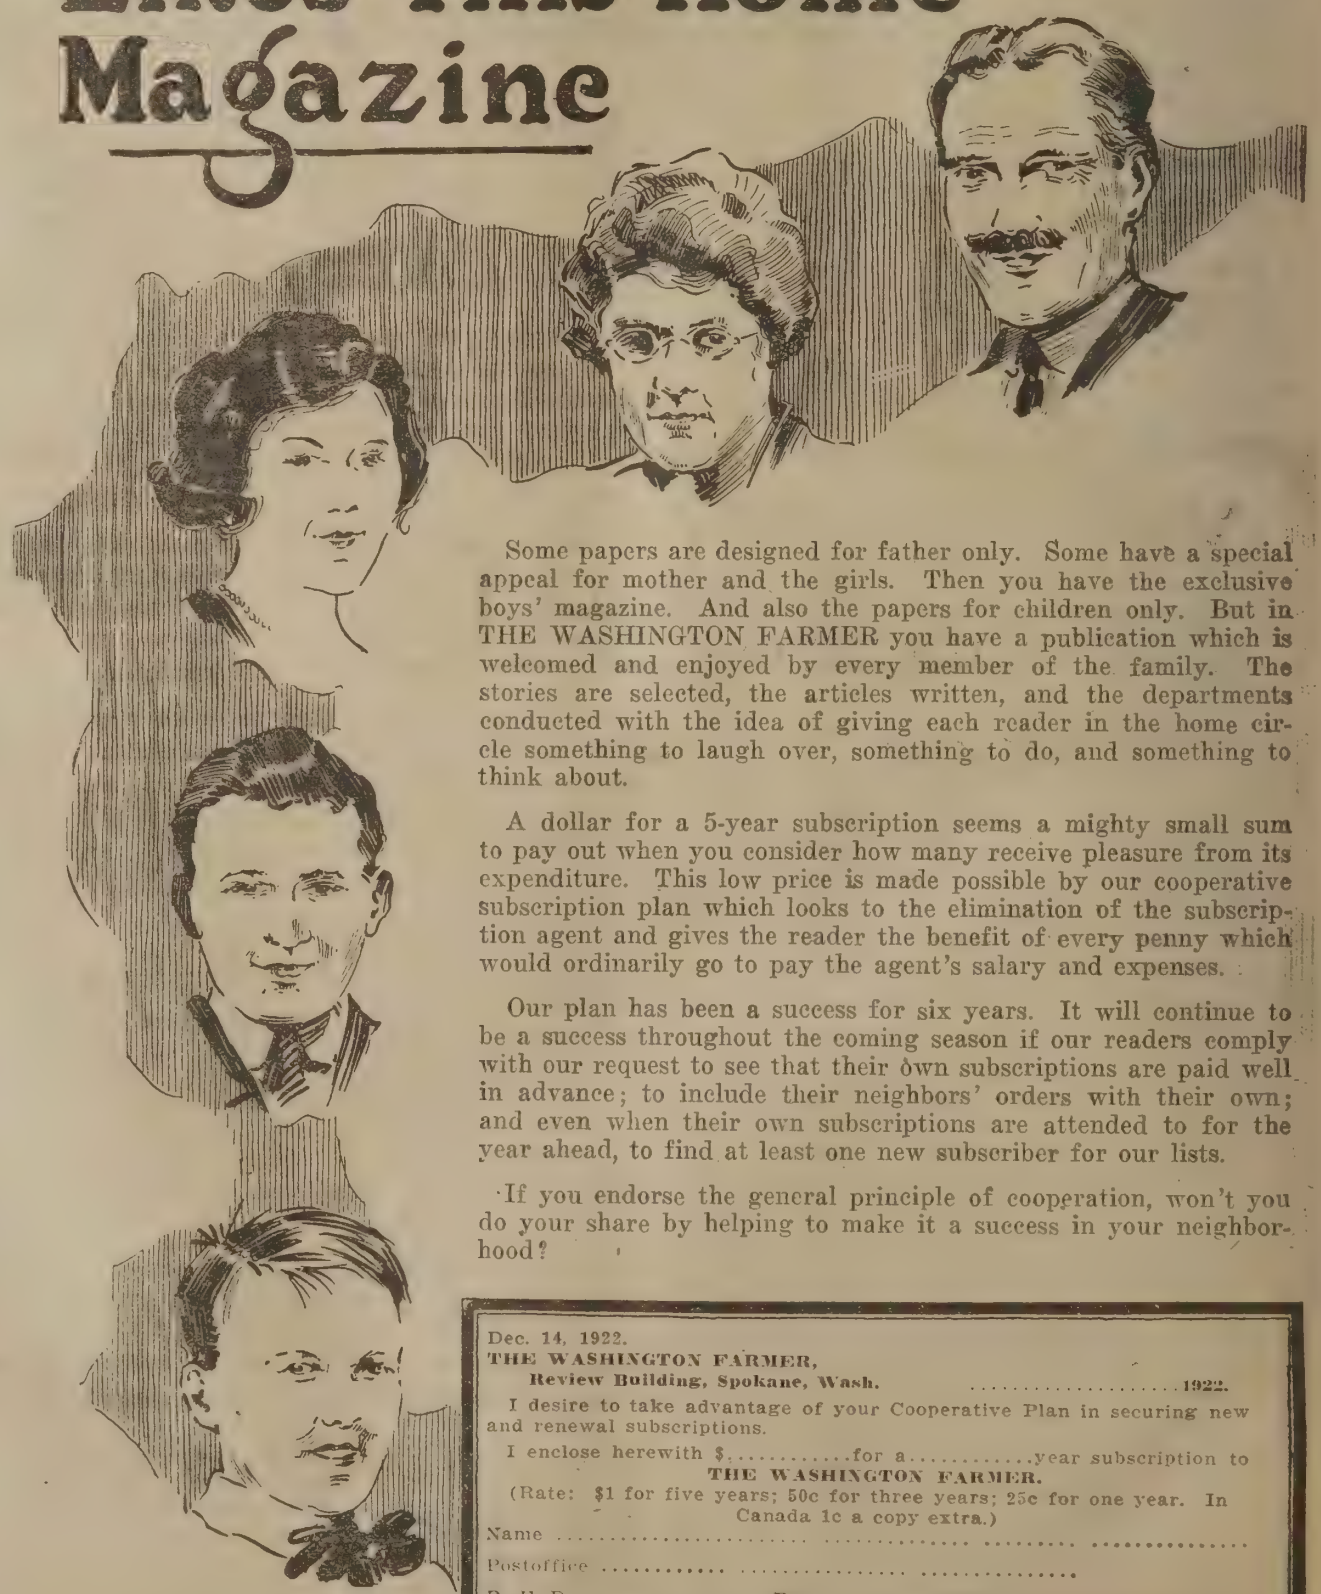
American foul brood is one of our worst bee diseases, and is caused by a bacteria which is found in the honey, according to A. B. Slocum, bee specialist of the state college extension service. In cleaning out a diseased hive the old colony is set to one side, and a new hive placed on the old stand. Lay a newspaper in front of the hive and shake all the bees onto it. They will enter the hive and begin working.

All of the infected honey from the old hive can be used for anything except for feeding bees, since the honey is not injurious to humans. There is no germicide yet found that is strong enough to kill the foul brood bacteria, so it is necessary to use fire in cleaning up the old brood combs. There should be frames with foundation combs in the new hive, which prevents the bees from depositing any honey containing germs. They will be compelled to consume it all for the manufacture of wax, with which to build the new combs.

FEWER APPLES SHIPPED.

Reports issued by the United States department of agriculture show that the total shipments of boxed apples up to November 1 this year amount to 15,103 cars, of which the state of Washington alone furnished 8248 cars and the Wenatchee district over 5000 cars. California shipped 2645 cars, Idaho 1414 and Colorado 1160.

Last year at the same date the total boxed apple shipments were 30,069 or practically twice as many, and Washington shipped 14,759 of these.



Cherries and Gooseberries

J. A. Campbell of Vashon, King county, finds both sour cherries and English gooseberries profitable crops for their district. Last year the cherries produced exceptionally well and brought a good price on the local market.

"As for the gooseberries, there is very little work in harvesting them, and there is no trouble in disposing of the entire crop at a comparatively better price than for other kinds of berries," according to Mr. Campbell. "The difficulty with the crop is in securing new stock, since very few of the nurseries carry this gooseberry, and it does not reproduce itself as readily as some of the other varieties."

The Campbell farm is only a short distance from the town of Vashon and consists of between four and five acres.

Every Member of Family Likes This Home Magazine

Some papers are designed for father only. Some have a special appeal for mother and the girls. Then you have the exclusive boys' magazine. And also the papers for children only. But in THE WASHINGTON FARMER you have a publication which is welcomed and enjoyed by every member of the family. The stories are selected, the articles written, and the departments conducted with the idea of giving each reader in the home circle something to laugh over, something to do, and something to think about.

A dollar for a 5-year subscription seems a mighty small sum to pay out when you consider how many receive pleasure from its expenditure. This low price is made possible by our cooperative subscription plan which looks to the elimination of the subscription agent and gives the reader the benefit of every penny which would ordinarily go to pay the agent's salary and expenses.

Our plan has been a success for six years. It will continue to be a success throughout the coming season if our readers comply with our request to see that their own subscriptions are paid well in advance; to include their neighbors' orders with their own; and even when their own subscriptions are attended to for the year ahead, to find at least one new subscriber for our lists.

If you endorse the general principle of cooperation, won't you do your share by helping to make it a success in your neighborhood?

Dec. 14, 1922.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

ORCHARD AND GARDEN

Orchard Problems

By O. M. MORRIS,
Head Department of Horticulture, Washington, D. C.

I planted a fruit tree some time ago and the tree died, but there are several sprouts coming up from the roots. If I should cut off the dead tree would it be sufficient to leave the sprouts growing and would they bear fruit later on?
Vancouver, Wash. M. R.

The sprouts coming up around your apple trees would, if permitted, probably make fruit trees. The probabilities are that they are from below the graft and would be seedling apple trees of very doubtful quality of fruit. You would have also the added disadvantage of a stump rotting in the ground that might develop and destroy the tree a few years later. If you set the trees last year and could select one large sprout and bud it or graft it you might save some time in securing fruit. If your tree was planted last year or the year before, however, it will generally be a saving to take out the stump and set a new tree.

What is the proper way to care for the asparagus bed in the fall? MRS. J. E. W.
Cottage Grove, Ore.

The best method of caring for an asparagus bed in the autumn is to clear the ground of any weeds, litter and trash, give it a slight cultivation, if there is any crust formed, and then mulch the entire bed or particularly the rows if they are set wide apart, with manure from the horse stables or cattle yards. Place this mulch about four inches to six inches deep when it is fresh. It will ordinarily settle down to three inches or a little more in depth and will make a good cover and good fertilizer for your crop next season. If your bed is a small one in the yard, I would mulch the entire bed.

TO REDUCE DISEASE AMONG BEES.

Four years ago Pierce county had more diseased bees than any other county in the state. Now the disease is reduced to 7 per cent, due to the untiring work of the beekeepers and their cooperation with A. B. Slocum, bee specialist of the state college extension service. While 7 per cent of disease is considered clean, the beekeepers expect to reduce the figure to 5 per cent next year. Approximately $500 has been saved in Pierce county alone by ridding each apiary of disease. This, of course, includes the saving of healthy colonies, which would otherwise have been infected and lost.

Berry Post Problem

Berry growers are finding that the berry post problem is of greater importance each year. Good cedar is not only getting scarcer, but the old posts are rotting off at the ground line and breaking off. To avoid such trouble the growers must either use other timber than they are using or must give what we have some sort of treatment that will make it last. Fortunately it is possible to treat timbers so that they will last for more than twice as long as they would without such treatment.

A certain fungi is responsible for the decay and one should not blame it on the chemical action of the soil or the wood itself. Moisture, air and favorable temperature are required for the fungus and our climatic conditions provide the moisture and favorable temperature. The soil is full of air down to a considerable depth and the wood material furnishes the food. The fungi come from the rotting wood in the soil, or the spores get onto wood from the air or from contact with other decaying wood. Wood buried in water or in dry situations will last for hundreds of years, due to the fact that either air or water is not present. In moist soils or in contact with moist soil decay is rapid.

Creosote is one of the best preservatives for this use and, in fact, it is the base for many patented preservatives on the market. Creosote is quite a variable compound obtained from distillation of tar-like substances. Coal tar creosote is the best form to use. The creosote not only poisons the wood against fungus attack, but also to some extent excludes air and moisture.

Posts to be creosoted should be well seasoned. The best form of treatment is dipping. Dip the portion to go into the ground and a few inches above. The creosote should be heated to 220 degrees F. for dipping purposes. The posts are left in this solution for two to six hours.

Willow, alder, maple and other soft woods may be used for fence posts if treated with the creosote method. Such timbers will often outlast other more durable timbers that have not been treated.

The growers of berries should be looking to the future on this particular means of preventing loss of their posts.

The Berry Grower

"For a small berry farm of about 15 acres there should be about five acres of raspberries, both early and late varieties," says L. M. Hatch, a well-known berry grower and orchardist of Alderton, in Pierce county. "It is also advisable to have strawberries because they come early in the season and work well as a combination crop.

"One acre of loganberries will work well in the combination and I would have three acres each of bush and Evergreen blackberries. In this way the grower can have his crop harvested over a longer period of time than by some of the other combinations now in use. In fact, the above varieties will extend the picking season from June first until the first of September.

"Some berry men feel that such crops as asparagus and rhubarb are profitable crops in connection with the small fruits, since both come early and can be out of the way before the main rush of the berry season is on. Both of them need quick action, however, and should not be attempted unless the market in one's own location can be properly taken care of.

"The main point to look for is to get a long harvest season which requires the least amount of hired help. If there is a desire for tree crops, such varieties as sour cherries and pears can be planted in the berry rows with good results, since there is a growing demand for both. As for apples, I would not advise any, since I do not believe they make a good combination with berries."

Disease on Berry Bushes

"A blue or purple appearance of the new berry shoots has been found in the Puyallup valley this last season," said Arthur Frank, plant pathologist of the western Washington experiment station. "In such cases the affected shoots soon died and the growers were much concerned as to just what sort of a disease this was and what might be expected from it.

"This trouble seemed to be caused by a fungus of some kind, but it does not spread through the field. If the affected canes were cut out, no more of the disease appeared. None has since been found in the affected fields.

"A similar disease was common on the blackcap raspberries a few years ago, but it was more virulent than this new trouble with the red raspberries. As a result of the disease on blackcaps they can not be grown largely in this district for any length of time without being affected and the plants killed by the trouble.

"The blue stem on the red raspberries is not that sort of a trouble. It belongs to the type of degeneration diseases, it is believed. This is a type of disease that affects plants year by year, reducing their yield and finally making the plant a worthless individual. This type of disease seems to be present on red raspberries at the present time, particularly the Cuthbert variety. Often a Cuthbert field is found in which there will be a considerable number of plants which do not do well in spite of good care. These are very evidently suffering from some sort of a degeneration trouble.

"Nothing can be done with such plants except to remove from the field and destroy them. No sets should ever be taken from such fields for planting. Sets should be taken only from vigorous growing, high-yielding plants and not from these weak plants. Much of the trouble at the present time is due to the fact that during the times of high prices many fields were planted with any kind of plants. Such plants should not be used for furnishing new fields.

"In this type of degeneration diseases we find such troubles as leaf curl, mosaic, blue stem and others. In western Washington at the present time we have the leaf curl and blue stem. The true mosaic has not yet been found. Further study and experiments with these types of trouble will yield greater information and also methods whereby they may be combatted more effectively."

POISONING ORCHARD MICE.

In keeping pace with the calls for poison Yakima County Agent A. E. Lovett reports mixing over 10,000 pounds of poisoned bait in the campaign against orchard mice. Leo K. Couch of the United States biological survey, who is directing the preparation of the poisoned bait, says that it takes about two pounds of bait an acre and that the best method is to scatter the bait in the runways. These, he said, were readily located by raising up the alfalfa. Placed in this way the poison is protected from birds. Later when rain or snow comes caches of the poison are better

GIVE YOUR BRAIN A CHANCE

Do you want real money coming in every week? Do you want to be a head mechanic? foreman? or owner of your own shop? Do you want to work inside where it is warm and dry in the winter, or cool and shady in the summer? Do you want to get away from a life of drudgery, to take up something that is new and interesting every day and gives your brain a chance? Do you want to take automobiles apart and put them together so they run like a fine, expensive, gold watch? Do you want to get into that class of fellows called experts, who never worry about a job because they are always in demand at good wages?

BE AN EXPERT

Thousands of expert auto mechanics are wanted to take care of the increased automobile business in the west. The expert is needed in all shops. You can become an expert. It is easy. You don't need a fine education. If you like to "tinker" with machinery and can read and write you can become an expert. If you have already had incomplete courses in auto-mechanics you can become an expert. You can do it the Adcox way.

IT IS EASY

The Adcox way will train you to locate quickly the trouble when everything seems all right, but the engine remains dead. The Adcox way trains you to locate loose bearings, wrong-timing, bad carburetor adjustments and many other troubles by listening to the motor. Balky self-starters become an open book to you. You learn on the actual cars in a very clear, easily understood, Adcox way how to repair the finest big cars, as well as the lighter, cheaper makes.

LEARN on the REAL CARS

Twelves, sixes, or fours, Packards and Cadillacs, Fords, or Overlands, autos, or tractors—the Adcox way trains you in all.

Nowhere in the United States are opportunities so numerous and good as here in the Northwest. Adcox graduates are getting the big money in the best situations, no matter where they are located.

GET THE BIG MONEY

So confident am I that you can come here to the pleasant, bracing climate of Portland and become a first-class auto mechanic, an expert capable of getting the big money the Adcox way, that I have made a special, free, proof-offer that guarantees your satisfaction without cost to you.

GUARANTEE

I haven't the space here to tell you all about my system, the big money my graduates are making, the fine positions they are holding, where to find room and board, etc., and my special guarantee; so get a pencil now while you have nothing else to do, fill in the coupon below, tear it off and mail it. I'll shoot back my big, 112-page free book by return mail and you can be reading it day after tomorrow.

Among the hundreds of letters I get from satisfied students, this is a fair sample:

"I MAKE OVER $300 A MONTH"

Dear Mr. Adcox: I took up a course. When I finished I went to work, for $150 a month. Now I am in business for myself, averaging $300 and over a month.
JULIUS W. WINTERS, Portland, Ore.

FILL IN THIS COUPON AND MAIL NOW.

L. L. ADCOX, PRESIDENT,
ADCOX AUTO AND AVIATION SCHOOL,
PORTLAND, ORE.

Send me a FREE copy of your BIG RED BOOK NO. 3 on the auto business and I'll read it.

Potato Culture

Three Main Things to Consider

"The three main points of potato culture are good soil, careful preparation of the seed bed and good seed." This is the formula set down by Guy Taylor of Olympia, when asked to tell something about his secret of success with potatoes.

"We have a sandy loam soil, which is subirrigated. If possible we plant on land that has been in clover. If turned under in the fall the sod will rot well and there will not be so much danger of rhizoctonia. We plow as early as possible in the fall and turn the sod under about three or four inches. In the spring we double disk and harrow and then plow in the opposite direction.

"A planter is very good for planting, but we use a shovel plow, going twice in the row and drop by hand. The field should be harrowed as soon as planted, and again just as the plants are coming through the ground. Deep cultivation should be practiced close to the rows for the first two or three times and then stirring the ground farther out as the plants become older. If the patch is cultivated once a week it keeps the growth more even, and there is less danger of the tubers being odd shapes. By regulating the distances of the plants in the row one can govern the size of the tubers to a certain extent. We generally plant about 200 pounds of seed to the acre, using 12-ounce seed pieces 14 inches in the row.

"We have found," continued Mr. Taylor, "that by applying barnyard manure in lines where the furrows are to be made we can realize about $3 per load for the manure by the increase in yield of the potatoes."

Mr. Taylor stated that it was his belief that Thurston county had some of the best potato land on the Coast, and there is a possibility of its becoming one of the important potato sections in due course of time.

A Result of Good Breeding

Some interesting data which demonstrates the value of the purebred bull comes from Ray West, Guernsey breeder, of Yakima.

Mr. West showed the testing records on two heifers, both from Shorthorn cows, but one was sired by a registered Guernsey bull and the other by a grade Holstein. The heifers are practically the same age. The first produced 8500 pounds of milk that tested 5.65 or 1.86 pounds of butterfat a day. The heifer from the grade Holstein produced 9400 pounds of milk for the year and showed a 3.65 test or a daily butterfat production of 1.25 pounds.

The heifer sired by the registered bull produced a little over a half pound of fat daily over the other and it shows that, although there may be a noticeable difference in the amount of milk given in favor of the poorer cow, the fat content may be much lower in an animal from unknown breeding.

CHELAN COUNTY POULTRY SHOW.

The Chelan County Poultry show will be held in Wenatchee January 8-12. The following officers are in charge of the arrangements: V. L. Garner, president; J. H. Tyrell, secretary; J. H. Gormley, treasurer; I. Van Valkenburg, superintendent of 1923 show.

POULTRY 174

$2000 FOR FIVE HENS—A RECORD PRICE for record hens. We announce the purchase of F. E. Gilbert's winning pen of White Leghorns at the recent Puyallup egg laying contest. These five birds laid 1421 eggs in 12 months, thus establishing a new world's record. These birds are to be mated with the best cockerel to be obtained and used in building up Queen Quality strain of chicks. We have also contracted with Mr. Gilbert for the eggs from the pen sisters of these wonderful birds. We will have a limited number of chicks and eggs from them for sale this season. The greater part of them will be used for our own use. In addition to the Gilbert birds, we will have many flocks direct from Hollywood and Tancred stock. We also hatch R. I. Red and Barred Rock chicks of exceptional quality. We are now booking orders for early delivery and have sufficient capacity to assure prompt delivery at time promised. Incubators, 15 per cent off. We offer a special discount of 15 per cent on Queen incubators purchased from us during November and December. In addition to the Queen, we carry the Master's incubator, Petaluma electric incubator, Blue Flame brooders, American brooder stove and are agents for the Kresky brooder stove. Write for our new catalog. Queen Hatcher, 87 Sewart st, Seattle, Wash. Ell. 2054.

"HENACRES" BABY CHICKS FOR 1923. IT is time to plan your poultry work for next spring and we suggest that you write for our free illustrated catalog now. The booklet contains lots of information on poultry management, gives our feeding formulas, etc., besides describing our stock. "Henacres" Leghorns have made good all over the northwest, so you take no chances in buying them. Some one in your neighborhood knows us, ask him. We have already sold 40,000 chicks for 1923. "Henacres," Box A, Prosser, Wash.

CERTIFIED WHITE LEGHORN BABY chicks, hatched in the world's largest electric hatchery, for spring, 1923 delivery. January prices, $4 per 25; $8 per 50; $15 per 100. Special prices, 500 and 1000 lots. Order early chicks now and realize big broiler profits. Choice, free range, high egg-producing breeding flocks inspected by Sonoma county farm bureau. Safe arrival guaranteed. CHAPTER TWENTY-SIX.

Lost on the Great Snow Roof.

Now, before resting, they moved up a little nearer. There they found a small pool of the ice water, and all of them drank, using a tin cup.

"Better not gulp down too much of this frosty stuff before you rest," Cooper cautioned them. "This raw air soon makes a fellow shiver. It'll be worse when you've got ice-cold air around you and ice-cold water inside of you."

After quenching their thirst, all found a dry patch of ground and dropped down on it, most of them without a word. And they rested as long as the sharp cold here would allow them. After that they got up, slowly, painfully, stiffly, adjusted their packs as well as they could and moved toward that crooked white line.

"Here comes the toughest job of all, I'm guessing," said Givens. "Skating in the dark isn't any soft snap, even down where you can get your breath. It'll be something awful up here, 've no doubt."

"Not much wind here now. And that's one thing to be thankful for," Sanders remarked.

Soon the party were climbing up the ice field. It was so rough as to make hard climbing, but the climbing would have been far harder if the ice had been smoother, on account of slipping.

At length the climbers ceased to climb, and found themselves on the comparatively level top. Here the traveling was easier, and the little party of hard-driven adventurers, by keeping the polar star on their left, had at first no trouble in steering their course across the snow cap. Indeed, the start was so easy that not one of them suspected how much trouble and how many hardships awaited them on that great, frozen field.

Fortunately the white surface of the hard snow reflected the starlight, and the six weary fugitives could see better up here than anywhere since night had overtaken them. While the frozen snow, or ice, was very rough in places, tramping over it was easier than picking a route through gloomy woods, crowded with rocks and brush and fallen trees.

"We thought it was cold crossing this big snow bank when the sun was shining. But to me it feels 10 times colder now," Jess Holloway said, shiveringly. "I'm going to stop and put on my blanket. One of 'em, if not both."

"Guess we're all feeling the need of a blanket or two just now," answered Sanders. "Certainly I am. That little gust sweeps along every now and then cuts my face like a knife, and seems to pass right through my thin clothes."

"Don't it, though?" exclaimed Givens. "Must be down to zero up here on top of this big iceberg."

At once a brief halt was called, till each man could take a blanket from his pack and fasten it around his shoulders. Then they moved on as before, following a due-east course. Early September though it was, they seemed to themselves, nearly three miles up in the air, to be in mid-winter.

"Boys, when we once get this snow cap between us and that pack of red wolves I'm hoping we'll be out of danger," Cooper said, encouragingly.

And Sanders answered: "Yes. To me it seems rather probable that that war party trailing us will abandon the chase when they find that we've escaped over the Great Divide."

"The good Lord grant they may!" exclaimed Givens, fervently. "Just know I'll be past traveling by the time we struggle across this frozen backbone."

"Don't give up till we get down into the timber and in a warmer climate, Jeff," said Holloway. "I'm feeling hungry again and we'll need a good fire and a square meal before we can rest or sleep."

"Lucky for us we're not having another snowstorm," Orlando remarked. "With a clear sky like this we can find our way across easily enough. We don't need any compass but that north star. If it was pitch dark, though, we couldn't see either the sky or our compass, and we'd have an awful time."

"Awful time wouldn't be any name for it," spoke out Esau. "That snowstorm nearly blinded us in daylight, I recollect well enough. In the night the darkness would be so thick we'd have to cut it with our knives."

"Not too late for us to run afoul of a snowstorm up here yet," Cooper warned them. "I've no doubt it can snow here in the dark just as well as in daylight. That snow flurry we got into was moving, and they can move just as well by night as by day, snowstorms can."

"Better if anything, I'd guess," added Orlando. "I can easily imagine that the storms are worse up here in the night-time, when there's no sunshine to thaw them out. Let's hope, though, that we can make it across this bleak region before a snow quall swoops down on us."

Others echoed the wish. But, before they had gone much farther, Holloway was heard to exclaim: "Looks to me like I see something black ahead yonder!"

All the party stared in that direction. But they kept tramping, their boots crunching the hard snow loudly as they moved over the frozen surface.

"And my eyes tell me the same story," Givens presently spoke out. "Fact is, I seem to see a great wall of blackness ahead. Not so very far ahead, either."

By this time others could make out the same wall of blackness, rising threateningly to bar their way.

"Guess we're heading toward another cloud, and maybe another snowstorm," remarked Sanders. "And if we do run into anything of that kind we'll have a time getting out of it! You mark my word if we don't!"

Now Cooper spoke: "Easy to see that that's just what it is. Wonder if we couldn't circle round it somehow."

"Not much chance to circle. Esau was speaking. "That black wall stretches as fur north as I can see and as fur south as I can see. No show to dodge the thing. Our only hope is to plunge right into it and then march straight on across."

"Straight on across if we can!" exclaimed Holloway, in doubtful tones.

"Yes, if we can—if we only can," commented Sanders. "World of uncertainty about that, though."

And Holloway added: "We can't well go round the cloud on its outside. But, ten chances to one, we'll go round when we get inside of it."

"Well now, I wonder if we will," said Cooper.

As the fleeing gold seekers neared the cloud it seemed to them to grow blacker. And it appeared to be hanging not many yards above the snowfield. When they had tramped on into its shadow they found the cloud so thick that not a trace of the starlight could sift through it.

Scarcely had the fugitive miners found themselves in utter darkness when they called a halt. Now, guided by their voices only, they grouped themselves together for a consultation.

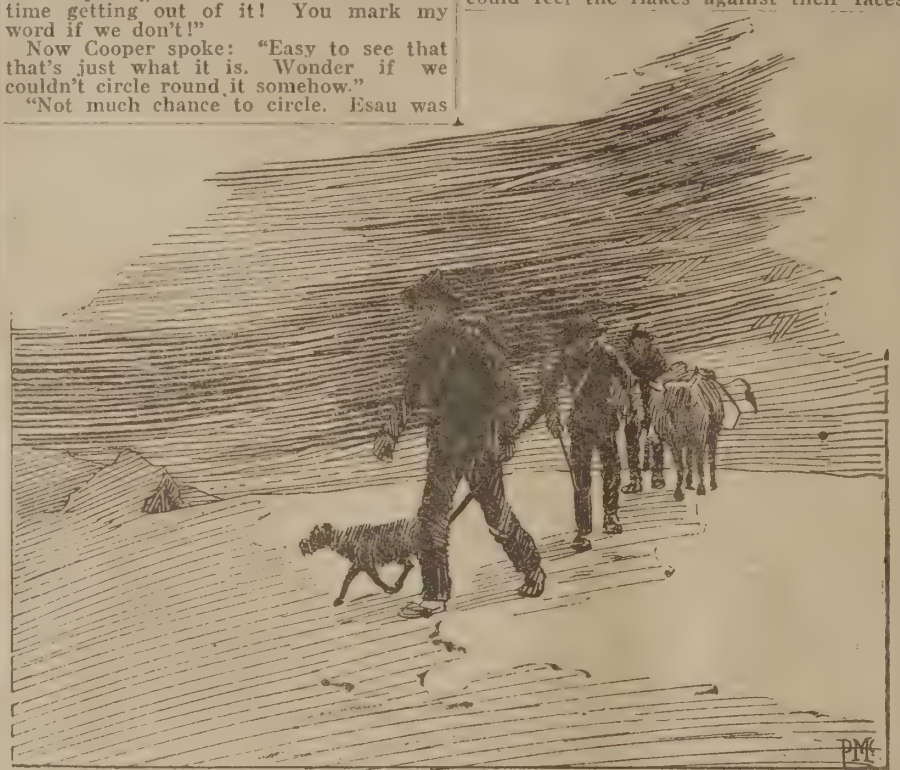
"Only way I know, boys, is to dive ahead straight as ever we can, and try to break through this floating darkness," Cooper told them.

"May be only a few hundred yards through it," suggested Holloway, hopefully.

"And it may be a few miles through," grumbled Givens.

"A few hundred yards or a few miles, we've got to break through somehow or some other how," Sanders reminded them.

"Exactly right, Abe. And the sooner we get on the march again the sooner we'll see clear sky," said Holloway.



Esau added: "And we'll freeze stiff if we stand still long."

Again they moved on. Now they knew they had entered a snowstom, because they could feel the flakes against their faces. There was little or no wind, and they inferred that the cloud over them was not moving. Except when somebody spoke they had only the creaking of their boots and of Brindle's hoofs in the frozen snow to guide them.

"One good thing about all this blackness, boys, Jess Holloway presently called to his followers.

"If there's anything good about it, I can't see what!" declared Givens, impatiently.

"Nobody is expected to see anything here. It's midnight in Egypt," Orlando said.

Not one of them suspected how much trouble awaited them.

"But there is," persisted Holloway. "We're safe from redskins now. They haven't a chance in the world to find us under this blanket of blackness."

"No. No more likely to find us than we are to find ourselves, I'm thinkin'," spoke out Esau.

"Find us! I'd say they can't!" Sanders exclaimed. "They couldn't find us in a million years likethis! They could pass within a foot of us and never discover us. I mean if we kept still. Never was a better hiding place than we've run into, on this miles-high roof of the continent."

After several minutes of making their way over the invisible whiteness under them and through the frozen blackness around them, Cooper called another halt: "Boys, this is about the most hopeless thing in the way of traveling that I've ever blundered in to. I've no more idy what direction we've been moving than if I was blind and deaf."

"It's a safe guess that we're not traveling in any one direction," was Holloway's opinion.

"And even if we are, it's not in the direction we want to go," added Sanders.

Now Esau spoke: "In cases like this, people are almost dead shore to travel in circles, I've often heard tell."

"If we're doing that, we may never get out of this black storm on the Rockies' roof," said Givens.

It was Cooper that answered. "We may not get out till day breaks. But the minute we can read our compasses we'll strike the right course. Not much that we can do, though, without a light."

"If we're not getting anywhere, what's the use of struggling round and round? We might as well sit down somewhere and rest our weary legs, I suppose," Holloway was speaking. "If we keep on in the wrong direction we may find ourselves back at the west edge of this mountain top."

"So say I," spoke up Givens. "I'm ready to drop anyhow. If we're just tramping and trudging our poor legs off without going anywhere, common gumption says sit down and sit there till we can see how to find ourselves."

The others agreed that traveling through this black snowstorm was worse than doing nothing. So each took off his pack and, after wrapping himself up as well as he could, sat down on it to wait for day. Orlando, after first relieving Brindle of her burden, covered her with his horse blanket, as he always did in bad weather. After that he, too, enveloped himself in his blankets and sat on his pack.

There was now some wind, and they had all turned their backs to it. Snow was still falling, thick and fast, as they could tell when they put out a hand and found their blankets covered with it. Also there was about six inches of loose snow under their feet.

"Looks to me like we might shape our course by the wind," Esau presently suggested. "Right smart breeze up here, I notice."

Cooper answered: "Trouble with that is, every guest that comes sweeping along is from some new direction."

"So I've noticed." It was Holloway's voice. "Even since we've been sitting here it has struck me on at least two opposite sides. I've had to keep turning to keep my back to it."

"Wind's no guide up here, halfway between earth and heaven," Sanders remarked. "Down on the earth, when there's a snowstorm on, it's a safe guess that the wind is from the north or northwest. But up here among the clouds, and about the first of September at that, who can tell anything about the wind or by the wind."

For several minutes now the whole party kept silence. Every man's head was enveloped in his blanket. And most of them, in spite of their blankets, were beginning to shiver.

"This is certainly darkness for you!" Holloway finally exclaimed, perhaps because the silence was becoming oppressive.

"A'int it, though!" Givens' voice said that. "I never saw anythihg that would beat it but once. That was 10 years ago—10 years ago last spring. Three of us were taking a raft down the Mississippi from White river, in Arkansas to New Orleans. A tropical storm broke on us and lasted for days. Owing to the fact that we didn't have any sweeps to steer with, we couldn't get the raft to land. That last night on the swinging, rocking old log pile was something horrible—something beyond words to describe. Not if I live a thousand years could I ever forget it. The raft finaly split itself wide open against a big tree—the river was very high—and two of us were swept through a crevasse—through a break in the levee. All the rest of the night, soaked to the skin, we floated and paddled about in that black forest. Just before daybreak we discovered a light, and finally reached high ground and a plantation. But that was the most frightful night I ever will pass through, I hope. This reminds me of it, though."

Again silence followed. More than once Frisk, crowded up against Esau's legs, could be heard to whine uneasily. Perhaps he was getting cold. Or he may only have been troubled at the strange surroundings. Esau threw the corners of his blanket over the faithful fellow. Once, too, the usually patient Brindle lifted up her strong voice and bawled loudly, drearily.

(To be continued.)

Bits of Fun FOR Everyone

Good All Winter.

Tramp—I've eaten nothing but snowballs for three days, mum.

Lady—You poor man! What would you have done had it been summer time?—Boston Transcript.

Food Essential to Health.

"You are not in politics for your health, I presume?"

"In a way I am," replied the chronic office seeker. "Experts say if a person doesn't eat regularly his health is apt to be poor."—Birmingham Age-Herald.

Too Heavy a Job.

Young Husband—Did you make those biscuits, my dear?

His wife—Yes, darling.

Her Husband—Well, I'd rather you would not make any more, sweetheart.

His wife—Why not, my love?

Her Husband—Because, angel mine, you are too light for such heavy work.—Selected.

And the Boy Was Fired.

"I can't keep the visitors from coming up," said the office boy dejectedy to the editor. "When I say you're out they don't believe me. They say they must see you."

"Well," said the editor, "just tell them that's what they all say. I don't care if you sass them. I must have quietness."

That afternoon there called at the office a lady. She wanted to see the editor, and the boy assured her that it was impossible.

"But I must see him!" she protested. "I'm his wife."

"That's what they all say," replied the boy.—Exchange.

Grasp the Opportunity.

Mother—Tommy always eats more pie when we have friends at dinner.

Visitor—Why is that, Tommy?

Tommy—Cos we don't have no pie no other time.—New York Evening Mail.

The Latest Thing in Food.

Patron (crossly)—Say, writer, what are these black specks in my cereal?

Waiter (after a close inspection)—Dunno, sir, unless it's some of them vitamines every one is talking about now.—Life.

"A Fool There Was."

Charlie—But I asked you, dearest, to keep our engagement a secret for the present.

Claire—I couldn't help it. That hateful Ella said the reason I wasn't married was because no fool had proposed to me, so I told her you had.—Exchange.

In Gratitude.

The Guest—I suppose your husband is very fond of yachting?

The Owner's Wife—Well, no; he ain't really. Sometimes it makes him awful sick, but he made his money outa canned salmon durin' the war an' he feels he kinda owes it to the sea.—Life.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I have been a reader of THE FARMER for a long time, but have never written, as I don't like to write very well, but feel I should help out a little on the page.

I have two babies, a boy of 4 and a girl of 3 years. We own our home and are pretty busy fixing it up. I am fond of reading and never fail to read the Family Circle.

I will give a few helps that I have never seen published in your paper:

Rhubarb juice applied to rust spots and then held over the spout of a teakettle of boiling water will remove the spots. Lemon juice and salt will also remove rust if applied and held over steam, same as rhubarb. It will also remove the rust if placed in the hot sun instead of being held over steam.

Muriatic acid will remove rust from any cloth without affecting the color. But be sure to have the cloth moist when you apply the acid and when it turns the spot light colored wash the acid out at once, as it will eat a hole in the goods. I have removed rust stains that have been in goods for years with this acid and I know it will not affect the color of the cloth.

To remove scorch from clothes when ironing, dampen a cloth in peroxide of hydrogen, lay it over the scorched place and run a hot iron over. I have used this method with success on both white and colored clothes.

When you set away a dish of beet pickles add a little grated horseradish and it will keep them from molding. MRS. Z. W.
Oregon.

(There are other recipes in this good letter which will appear next spring, as they are now out of season. Let me say here that this letter came several months ago and it, like others, has had to wait its turn. There are mony others which have to wait, but you may be sure, dear women, all letters are appreciated and if you watch you will find all or parts of your letters which are of general interest. Some recipes are duplicates and it would be a waste of space to repeat them, so you will take no offense, I am sure, if you don't always find your own.—Alice W. Barland.)

Dear Mrs. Barland: I have been a subscriber to THE FARMER for four years and expect to be a subscriber as long as I live if the paper is still being published.

I am writing on the subject of schools as an education is what I have always felt the need of very keenly.

I have two boys, ages 12 and 4; my 12-year-old boy rides 5 3-5 miles to school, has no drinking water while in school and no barn nor shelter for his horse. I have a neighbor who has five children of school age and her two younger ones go very little, as it is so far and so cold. We are entitled to transportation for our children and they are surely entitled to drinking water.

Salt Rising Bread

Dear Mrs. Barland: I saw a request for salt-rising bread. I have made this bread for a number of years with good success and, in fact, have taken the blue ribbon several times.

Salt-rising bread: In the morning put a tablespoonful of corn meal in a glass and scald a cup of milk and pour it over the meal, stirring well. Set this "start" on the warming oven and keep it warm all day and at night put it over the teakettle of hot water and cover well, but do not allow to scald. In the morning this should be light and foamy. I use a glass so I can see the air bubbles through it.

Before breakfast, if the "start" is light, mix a batter in a five-pound lard pail until about half full and beat in the "starter" well. Keep warm until the pail is nearly full; have your flour warmed in the bread pan. I use about three sievefuls. In the center of the pan scald about a pint of flour with hot water, beat up a good, stiff batter with warm milk or water, along with the scalded flour, then put in the light batter, beating well. Do not make more batter than your flour will knead stiff. Salt and set back on the warming oven to rise. When good and light knead loaves and put into pans, making the loaves small, and when light bake as other bread.

Keeping each process warm, not hot, free from drafts from start to finish, will insure good bread. I usually have mine out of the oven before noon. MRS. E. E. J.
Forest Grove.

Household Helps

By MRS. C. B. SMITH.

A three-burner oil stove stored in an old shed on this farm accumulated a coat of rust the owner despaired of ever removing. Taking a neighbor's advice, she gave the entire surface an application of melted lard, allowing it to stay on for a day or two. After a thorough rubbing with a kerosene cloth she gave the stove a soap and water bath. Much of the old enamel came off with the rust, but a fresh coat of stove enamel made it look like a new oil stove.

Touch up the worn off spots of nickel plating on the kitchen range with aluminum paint for metal. A unique suggestion for those who are tired of keeping the stove blackened is to give it a coat of aluminum paint once a year.

A glaring patch of new material on a faded garment is unsightly, to say the least. In discarding worn out garments such as denim overalls, khaki trousers or everyday shirts, save the good parts for mending articles of similar material.

Much time and extra labor will be saved during the canning season if the empty fruit jars are inverted after washing and drying and placed in strawboard grocery boxes of suitable size with good covers to prevent the dust from entering. These may be stored in any convenient place where they will be out of the way. One box containing all the lids makes it handy to find what is needed at any time there is canning to do.

VINEGAR PIE.

A request is received for a recipe for vinegar pie. The following was submitted by one of our readers and published in THE FARMER some time ago.

Vinegar pie: One egg, one heaping tablespoon of flour, one teacup sugar; beat well together and add one tablespoon of sharp vinegar, teacup cold water, flavor with nutmeg and bake in bottom crust.

Home Recipes

Mexican Con Carne—1 lb. chili beans, 1 qt. tomatoes, 2 large onions, 1-2 lb. beef, 1-6 lb. suet, 1 sweet pepper, 1 cup soup stock, salt, pepper and chili powder.

Soak beans over night, in morning boil till tender, run the pepper through the food chopper and add with all other ingredients and cook till tender and serve hot.—Mrs. V. R. Fisher, Idaho.

Boiled Sweet Apples—Cut in halves and remove cores, but do not pare. Place a layer in the bottom of the pan skin side down and fill up the pan promiscuously, add a cup of water or preferably about a quart of maple sirup, in that case use no sugar. Boil until tender. I pile them to one side till I can reach the bottom layer and remove that first then with another layer from the pile and allow that layer to cook till dark and rich like the first. Continue till all have been cooked at the bottom of the pan in the sirup and the result will justify the effort.—Mrs. E. M. Anderson, N. Y.

Sauer Kraut—Use 3 lbs. of salt to each 100 lbs. of shredded cabbage. Remove outside leaves and the hard core and shred the rest finely. Line the bottom and sides of the keg or jar as you fill in. Put in a 3-inch layer of cabbage then sprinkle 4 or 5 tablespoons ofsalt, repeat till cask is full pounding it down hard as you fill. The salt will extract the juice of the cabbage and this brine should rise about the slaw. Weight down and keep brine over the cabbage. Keep in a cool dry place for three weeks or four, when it will be ready for use.

Can Some One Tell?

Will some one tell how to remove grass stains from a lavender voile dress without taking out the color? EFFIE.

Please give me some good breakfast dishes and other meals as well.
MISS A. F.

How do you make chocolate sirup suitable for milk shake? MRS. F. B.

Can some one tell how to make fig bars like those we buy at the stores?
MRS. W. C. D.

WANTED: A MACHINE.

If there's a gas engine in the farmyard there should be a washing machine in the washroom. If water is piped to the horse trough it should be piped to the house. In fact, regardless of the condition of affairs in the farmyard, there should be modern labor saving conveniences in the house. Labor savers are nothing more or less than life savers.

IT MEANS CLEANLINESS.

Where water is carried from the well or spring to the house, not more than one-fifth as much is used per person in the family as where there is a plentiful supply of running water in the house. The result is much more convenience, comfort, cleanliness and health where the water is handy.

HOT AND COLD WATER.

It does not cost a fortune to have running water in the house if one goes at it properly. But, oh, what a blessing it is.

High Points in News of the Week

In his message to the new congress last week President Harding declared that the four-power treaty governing international relationships on the Pacific ocean was an absolute guarantee of peace for at least the 10 years of its duration as now standing. He suggested that the main principle embodied in the four-power treaty should operate with equal effectiveness in other parts of the world where guarantees of peace were needed.

This suggestion has already resulted in speculation in many quarters as to the possibilities of a five-power treaty between the United States, England, France, Italy and Belgium designed to guarantee the peace of Europe.

While former Premier Clemenceau of France has not committeed himself openly to such proposal, it is reported that he is heartily in favor of such move. He openly states that his purpose in visiting the United States, which he has been touring for the last month, is to induce, if possible, the United States to exercise an active influence in behalf of the reconstruction and future peace of Europe. He expressed himself as greatly pleased over the references to international affairs in the message of President Harding to congress. He last week had a personal conference with President Harding, other members of the governmental staff at Washington and former President Wilson.

* * *

The premiers of England, France, Belgium and Italy are meeting in London at the present time in a further endeavor to agree upon their relationship as allies in their endeavor to secure the fulfillment of the peace treaty by Germany. The meeting is reported to be a critical one. Premier Poincare of France, has officially announced that unless the allies as a group bring Germany to terms prior to January 15 France will alone further invade German territory with a view to compelling reparations.

* * *

In his message to congress last week President Harding urges the extension of farm credit and an enlargement of the powers of the farm loan bank. Other important recommendations in his message were as follows: That a conference be called to adopt federal and state policies for the uniform administration of prohibition laws throughout the entire country. That steps be taken to coordinate all forms of transportation, even the point of merging separate railroad lines into system, with a view to greater transportation efficiency; that a constitutional amendment restricting tax-free securities be adopted; that a constitutional amendment giving congress authority over child labor be adopted; that more stringent immigration laws be enacted; that the railway labor board be abolished and its duty taken over by a division of the interstate commerce commission with power to enforce its decisions.

* * *

A bill was introduced in congress last week which would, if enacted, create within the department of agriculture the office of superintendent of grain and appropriate a considerable sum of money of which the government through this office could buy wheat with a view to regulating the open market.

* * *

A farm credit measure was introduced into both houses of congress last week providing for the establishment by the government of a $60,000,000 fund to be divided equally as capital among the 12 farm loan banks, of which the Spokane bank, serving Washington, Oregon, Idaho and Montana, is one. At the present time these banks have government capital of only $12.000.000. The security given for loans taken by individual farmers is used as the basis of bond issues for raising more money, thus making the $60,000,000 original capital the basis for a large fund as loans are made. Under the proposed law loans would be made to farmers on personal credit for short terms as well as upon real estate for long terms, as under the present farm loan bank law.

* * *

The prohibition forces in congress last week won a signal victory when an attempt was made to strike out of the federal treasury supply bill an appropriation of $9,000,000 for the enforcement of prohibition laws was overwhelmingly defeated.

* * *

The new Irish Free State, as a dominion government similar to that of Canada in its relationship of Great Britain, became a reality last week. Timothy Healy of Dublin was sworn in officially as govenor general.

* * *

The new so-called progressive bloc in congress received its first formal opposition last week when its proposal that the Constitution be amended to provide for the direct election of the president was condemned by the president. The progressive bloc succeeded in securing the approval of this proposal by the agricultural committee of tne house of representatives. At the present time the president is elected by an electoral college made up of electors from the several states. Under this system it is possible, as had occurred many times in the past, for a president to be elected by less than a majority of the people at large.

* * *

A Civil war pension bill has been passed by congress and is now in the hands of the president, with practical assurance of receiving his approval. It provides that every G. A. R. veteran shall receive a pension of $72 per month and that every widow of a Civil war veteran shall receive $50 a month. There are now about 194,000 Civil war veterans and 272,000 widows on the pension roll.

* * *

Announcement was made last week that the salary of President Henry Suzzalo of the University of Washington had been raised by the board of regents from $12,000 to $18,000 a year. This is said to be the highest salary of any college or university president on the Pacific coast.

* * *

President C. S. Barrett of the National Farmers' union is in the Pacific northwest in the interest of that organization and of the Columbia basin irrigation project. He will be in the west until shortly before Christmas, attending the meetings of the Washington and Northern Idaho Farmers' union in Spokane this week and of the Oregon union in Lebanon next week.

* * *

Little has been accomplished in the senate so far on the proposed ship subsidy bill, which was passed by the lower house of congress two weeks ago. A proposal has been made that the subsidy be made subject at any time to the action of congress. President Harding, who recommended the adoption of the measure, is opposed to this amendment on the ground that he would rather have no subsidy at all than a half-hearted one.

* * *

The city of Astoria, Ore., near the mouth of the Columbia river, last week suffered a fire that destroyed the greater part of the business district, wiping out about 24 blocks. The origin of the fire is not known at this writing.

* * *

Senator Gooding of Idaho last week introduced a bill in congress which would amend the interstate commerce act so as to prohibit the railroads from charging more for a short haul than for a long haul. The measure was designed by Senator Gooding to prevent discrimination against the intermountain territory in favor of Coast territory, as has been done in the past.

* * *

George C. Jewett, general manager of the Northwest Wheat Growers, Associated, has proposed a farm credit system to take the place of the war finance corporation when the latter ceases to function July 1 next year. His proposal was indorsed by a conference of wheat growers' organizations at Minneapolis last week. It would provide for the establishment of 20 regional banks, similar to the federal land banks, with an approximate capital of $5,000,000 in the form of a revolving fund. The same cooperative convention indorsed the establishment of a national sales agency for cooperative wheat growers' associations wherever located, including those of Washington, Oregon, Idaho, Montana, North Dakota, Kansas, Nebraska, Colorado, Oklahoma and Texas.

* * *

Word comes from Washington that Secretary of Agriculture Wallace, in charge of the enforcement of all packer control laws, is strongly opposed to the proposed merger of the Armour and Morris packer interests. On the other hand, it is stated that Attorney General Daugherty, who would conduct any prosecution of the packers at the request of the department of agriculture, not only sees no legal objection to the merger, but favors it. This would indicate that President Harding will have to make the final decision.

* * *

The West Coast Lumbermen's association announces that all previous records for the production, sale and shipment of lumber in the Pacific northwest will be broken this year.

* * *

General Pershing, who led the American expeditionary forces in Europe during the war, last week in a public addresss severely criticized so-called radicals and the Ku Klux Klan.

* * *

Senator-elect Copeland of New York has officially announced that he will work with the anti-prohibition element in congress.

Ship Wool Direct to Boston

Yakima wool growers are anticipating considerable advantage from the recent ruling of the interstate commerce commission in giving Yakima the same freight rate as Seattle or Portland to Atlantic points. According to H. Stanley Coffin, one of the largest shippers of lambs and wool, if there is no hitch in the commissions ruling, he says he will ship his wool direct from Yakima and he believes other wool growers will do the same. Yakima claims that this would make of that city a leading warehouse, brokerage and shipping center for all the wool raised in that vicinity. Secretary Soots of the Yakima Commercial club, says half of the wool of the northwest is produced in the Yakima valley and it has averaged for several years more than 2,000,000 pounds anuually. This is one of the topics likely to come before the January meeting of the wool growers' association in Spokane, according to J. F. Sears, manager of the Wool Growers' Finance corporation.

The Christmas Gift

By MRS. E. M. ANDERSON.

In many instances a little forethought would save a lot of unnecessary work for ourselves and insure greater satisfaction to our friends, and nowhere is this more true than in the preparation of Christmas gifts. To be sure, it simplified the process very materially to buy in dozen lots, but, unfortunately, one's friends are not likely to have exactly the same tastes and the choice of one probably would not suit the other 11 at all.

I know a busy farm woman who prized above all her other gifts last year a big and well-made gingham apron, "because," she said, "it was just what I needed and I hadn't time to make it." My city friend, who teaches all the year, probably wouldn't wear such an apron once in six months, but neither would my farm friend have much use for the fancy bags and other articles in which the city girl delights. By the way, one must consider the individual, too, it isn't safe to assume that all farm women like one class of things and all city women another. I know one farm woman who probably never in her life used a bit of face powder, yet she treasures almost reverently the daintiest of silk vanity cases—equipped with powderpuff, mirror, etc.—a Christmas gift of several years ago. While it would soon become monotonous to give the same kind of gift to the same friend every year, it pays well to keep in mind the special preference of each. For several years I have given canned fruit to a few elderly relatives who haven't much fruit of their own—especially an old aunt whose girlhood was spent on our farm and who particularly enjoys fruit from the old place.

If one is fortunate enough to have a foreign friend who does fancy work for sale, nothing makes a more acceptable gift than the real hand-made, imported handkerchiefs, collar and cuff sets, scarfs and lingerie, with their exquisite fine needle work. I have a little friend in the West Indies who makes all kinds of fancy work and who needs so badly to sell it that, in using it for gifts, one is not only delighting one's friends, but doing a good deed to suffering humanity as well.

Any one with a sweet tooth will enjoy a box of chocolates or assorted bonbons and if these are home-made, so much the better. The first Christmas after my

Farm Business and Markets Outlook

(Continued from page five.)

DAYTON, Wash., Dec. 9.—Wheat—Club, $1.05; red, $1.01.

Fresh ranch eggs—$10.50@12.50 case, according to quality.

Butterfat—48c pound.

husband died a city chum sent me a lovely box of chocolates, and how I did appreciate her thoughtfulness in remembering that I had no one else to buy them for me then. My little daughter is getting old enough now, but she was a baby at the time.

City people usually enjoy something that savors of country life, especially woodsy things, and, if they live in a distant state, anything that doesn't grow in their own section will be particularly welcome. The latter fact applies equally well to country people.

Any fruit grower should be able to make up attractive boxes or cartons of winter apples to delight the heart of any friend who had no fruit, and a good cook has at her command endless Christmas cheer in the shape of boxes of assorted cakes or cookies, a frosted layer cake or a nice pie.

It isn't so much the gift, in itself, as it it its adaptability to the recipient thereof that really constitutes right or wrong giving and proves delightful or disappointing.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4055. Junior dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires four yards of 32-inch material. The width of the skirt at the foot is 2 1-4 yards. Price 10 cents.

3814. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2 1-4 yards of 27-inch material for the guimpe and 3 1-4 yards for the dress. Price 10 cents.

4178. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44 46 and 48 inches bust measure. A 38-inch size requires 3 5-8 yards of 54-inch material. The width of the dress at the foot is 2 3-4 yards. Price 10 cents.

4172-4174. A stylish street costume. Coat 4172, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3 1-2 yards of 44-inch material for a 38-inch size. Skirt 4174, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is 2 5-8 yards. To make this style for a 31-inch size will require 3 3-8 yards of 44-inch material. Two separate patterns, 10 cents for each pattern.

4022. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 2 3-4 yards of 40-inch material. Price 10 cents.

3965. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 7 7-8 yards of 36-inch material. The width at the foot is about two yards. Price 10 cents.

4180. Ladies' apron dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 5-8 yards of 32-inch material. The width of the skirt at the foot is 2 1-4 yards. Price 10 cents.

4188. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires three yards of 32-inch material. Price 10 cents.

4183. Ladies' bloomers. Cut in four sizes: Small, 27-29; medium, 31-33; large, 35-37, and extra large, 39-41 inches waist measure. A medium size requires 1 7-8 yards of 36-inch material. Price 10 cents.

3997. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 5 1-4 yards of 32-inch material. Price 10 cents.

3438. Two dainty aprons. Cut in one size: Medium. No. 1 will require seven-eighths yard of 36-inch material, and No. 2 will require 1 1-4 yards. Price 10 cents.

3770. A dainty boudoir set. Cut in three sizes: Small, medium and large. The cap No. 1 will require three-fourths yard of 27-inch material. No. 2 will require five-eighths yard. One pair of slippers will require three-eighths yard for a medium size. Price 10 cents.

She Knows

how to use left-over bread and make the farm hands like it

LOTS of bread was used on her table, but lots of it also was left over. She used to throw away a lot.

But now she knows what to do with it, for one day she found a recipe which told her how to use raisins in bread pudding.

It made "a new dish" of it. Men who didn't like plain "bread pudding" were delighted with the raisins and became enthusiasts.

Raisin Bread Pudding.

Three-fourths cup Sun-Maid Seeded Raisins, 2 eggs, ½ teaspoon salt, butter size of an egg, ½ cup sugar, cinnamon to taste, ½ large loaf of stale bread, 2 bananas or apples.

Soak the stale bread over night in water. When time to make the pudding press as much water as possible from the bread so that the bread is about the same consistency as dough, then take a fork and get all lumps out. Do not leave the crust if it can not be mashed to the same consistency as the bread. Add well beaten eggs, salt and stir. Add raisins mixed with the butter. Put into dish in layers, covering each layer with sliced bananas, sugar and cinnamon. Bake in slow oven until brown. Serve with whipped cream.

All measurements for this recipe are level.

Blue package (seeded) best for pie and bread

Now she never wastes a slice of bread. She even has to bake bread especially to make this pudding.

Try the recipe and see how good it is—with

Sun-Maid Raisins

Hear your men folks call for more, and how they compliment you. Try it now.

Be sure you get Sun-Maids—the finest raisins grown.

Your retailer should sell you Sun-Maid Seeded Raisins (in 15-oz. blue packages), the best bread-pudding raisins, for not more than 20c.

Insist on Sun-Maids, the kind you know are good.

Mail coupon for free book of tested Sun-Maid recipes.

Allie Brunink tells us about her baby brother, who is about 7 months old now. She says he is a happy little fellow. One night his mother put him on the floor and he crept. Allie has a doll, too, and it goes to sleep. Allie is in the fourth grade at school and is 9 years old. The Brunink home is in northwestern Washington.

From Asotin county, Washington, comes a letter from Leslie Smyth, telling us about his two sisters, Kathleen and Eunice, and himself. The Smyth children have three pets, a kitten they call Sister, a dog named Keeno and Buster, the pony. They like to have their mother read to them during the winter evenings. Leslie and Eunice walk two miles and a half to school. They are both in the second grade. Leslie is 9. His birthday is August 24.

Alma Abrahamson is visiting with her aunt and uncle in Skagit county, Washington, this winter and going to school. Her real home is in Canada. Alma's birthday is July 10. She is 10. She says her uncle has three cows, two pigs and a calf.

Victoria Wedam, 11 years old, likes spelling the best of all her studies at school. Her other subjects are arithmetic, reading, geography, hygiene, grammar and history. Victoria is a fifth grade student and she has two classmates, Hazel and Grace. The next time Victoria writes to us we will get her picture. The picture is not developed yet. It is still in the camera. (Thank you, Victoria, we shall look for it.) Two horses went in the oven white and came out brown. Name them. Two loaves of bread. Victoria's birthday is December 14.

October 1 Emrose Corbin had a birthday party and received a number of nice presents. Among them were two boxes of stationery, a box of paints, two small dolls and three handkerchiefs. Emrose is 9. Her home is in central Washington, Chelan county. (We can not print stories that are not original, Emrose, but Aunt Nellie would appreciate receiving a story of your own composition.)

Gilbert Gord is one of our new cousins and we are glad to welcome him to the Corner. Gilbert is 7 years old, lives in Thurston county, Washington, and has one sister and four brothers. He is sure he and his sister will have a good time reading The Junior Farmer this winter. He is in the first grade at school.

Here we have a letter from a cousin who signs her name as Frances. "My teacher is reading 'Billy Whiskers' to us. It is a funny book. I like to go to school. Today papa is filling our silo. It is fun to watch him." Frances' home is in Yakima valley, southern Washington. (Next time tell us what your last name is, Frances.)

"I am a little girl 7 years old," says Eileen Cromer of Spokane county, Washington. "My birthday is April 24. I have a Shetland pony, two rabbits and five kittens for pets. I also have a little brother."

Hilmie Manson, who is 11 years old, is in the sixth grade at school and her teacher's name is Miss Jebsen. Her little sister, Pauline, too little to write, sends love to all the cousins. Hilmie lives near Grays Bay, in southwestern Washington.

We are glad to get another letter from Isabel Pettichord of eastern Washington. The stories and letters in The Junior Farmer interest her very much and she found her own letter in the last issue. Kathleen and Marjorie Welton are Isabel's friends. Isabel has one brother and two sisters. Little brother just started to school this term.

A nice letter comes to us from Louise Evans, a Whitman county (Wash.) cousin. Louise is a fifth grade pupil this year at school. She has a good teacher. At her home they have had plenty of blackberries.

Irene Fleming lives on a farm in eastern Washington, with her parents and two little sisters. She says, "We like animals." The pets at the Fleming home are three kittens and a dog. The Flemings like to read THE FARMER.

Roloff Hubert, a cousin in Yakima county, Washington, writes that he has two miles and a half to go to school. Roloff likes school. He is in the third grade. His dog is dead.

During his vacation Carl Sieveke had a fine time. When his father did not need the horses Carl and his brother rode horseback. He also had a nice visit with two aunts and his grandpa, who came to see them from California. He says one of his aunts rode horseback. Carl was 9 August 31, 1922. He is in the fourth grade and likes school pretty well. There are three other pupils in his class and 13 in the school. He says he has a good teacher. Carl's home is near the Idaho boundary line in eastern Washington. Every Sunday he goes to Sunday school.

Alice Herndon has not missed a day since school started; neither has she been absent. She hopes to get through the year with a record like that. Alice and her sister are in the same room now, but sister is in the fifth grade and Alice is in the sixth. They walk a mile every morning and then wait by the road until the school truck comes along and takes them to school. The schoolhouse is red brick and is three stories high. Alice is a King county (Wash.) cousin.

Birthday Greetings

FRIDAY, December 15—Irene Clark, 11 years old; Evelyn Cleman, 11; Marine Jackson, 11; Ward Rukgaber, 11; Esther Thieman, 10.

SATURDAY, December 16—Anna Belcher, 7 years old.

SUNDAY, December 17—Elsie Anderson, 10 years old; Alma Matsen, 11.

MONDAY, December 18—Robert Franz, 8 years old; Marie Groom, 9; Myrtle Lauritzen, 11.

TUESDAY, December 19—Reta Houghton, 8 years old; Wilber Van Leuven, 9; D. O. Wright, 11.

WEDNESDAY, December 20—Idella Bernice Johnson, 9 years old; Beulah Warren, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Joyce Meredith McDonald, Wayne Brittain, Kathleen Mary Stuhr, Alice Buntain, Ora Schafer, Kiamota Anderson, Mildred Gerber, Hazel V. Schafer, Vivian Domerude, Anna Van Derschelden, Clara Breitmeir, Irene Waranka, Clara Peterson, Molly McCormack, Bertha Van Derschelden, Leola Webb, Rachel Hoffman, Fern Ricketts, Alice Brown, Cecilia E. Stuhr, Ellouise E. Gilbert.

BEDTIME STORIES

By THORNTON W. BURGESS.

GRANDFATHER FROG HAS A GROUCH.

Grandfather Frog sat on his big green lilypad in the Smiling Pool. Grandfather Frog was out of sorts. In fact, he had the very worst kind of a grouch. Now, a grouch is a very bad thing to have; it makes every one uncomfortable, and no one likes to come anywhere near one who is grouchy.

So Grandfather Frog sat on his big green lilypad and couldn't see that jolly, round red Mr. Sun was smiling, nor that the Merry Little Breezes were playing in the meadow grass, nor could he hear the birds singing, or the bees humming. In fact, he was so grouchy that he let three foolish green flies go right past his nose, and what do you think it was all about? Why, it was just because his cousin, old Mr. Toad, had beat him in a race the day before.

It had been a funny race, the funniest race that the Green Meadows had ever seen. Grandfather Frog's legs are longer

Old Mr. Toad said nothing. He just grinned and grinned.

than those of his cousin, Old Mr. Toad, and Grandfather Frog had been so sure that he would win that race that even now it was hard work for him to believe that he had lost. The reason that he had lost was because Peter Rabbit had hopped up behind Old Mr. Toad and shouted in his ear that Mr. Blacksnake was coming. Now, there is nothing in the world that so frightens Old Mr. Toad as the thought that Mr. Blacksnake is somewhere near, and when he heard Peter shout that he hopped so fast he passed Grandfather Frog and won the race.

Of course, all the little meadow people teased Grandfather Frog almost to death. They teased him so much that Grandfather Frog quite lost his temper, and this is the reason that he sat on his big green lilypad and was so grouchy that even the Merry Little Breezes kept away from the Smiling Pool.

"It wasn't fair, it wasn't fair at all," grumbled Grandfather Frog to himself. "I can beat Old Mr. Toad every day in the week, and he knows it."

Just then he saw his cousin, Old Mr. Toad, coming down to the edge of the Smiling Pool. Grandfather Frog shook his fist. Yes, sir, he actually shook his fist at his cousin, Old Mr. Toad. And when Old Mr. Toad just grinned at him Grandfather Frog hopped up and shook both fists. Old Mr. Toad said nothing, he just grinned and grinned. The more he grinned the angrier Grandfather Frog became.

"I'll race you again right now," shouted Grandfather Frog.

Now Peter Rabbit had come down to the edge of the Smiling Pool without being seen, and when he heard Grandfather Frog say that, Peter just stole around behind Old Mr. Toad and shouted, just as he had the day before, "Here comes Mr. Blacksnake"

Off started Mr. Toad, just as he had the day before, without turning to see what was behind him. Grandfather Frog watched him go, and then all of a sudden Grandfather Frog opened his big mouth just as wide as he could and began to laugh.

"Ha, ha, ha! Ho, ho, ho! He, he, he!" shouted Grandfather Frog, and held on to his sides. You see, he had just realized for the first time what a joke it all was, and it tickled him so that he nearly split his sides laughing.

And that was the end of Grandfather Frog's grouch.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

I know a doctor who said he would live to be 90 by observing certain rules. The other day he died, 90 years of age.

Dr. Copeland.

It is said the doctor did not formulate these rules until he was long past threescore years and ten. Perhaps he would have lived another score of years had he started earlier to demonstrate his faith in his method.

It is the desire of each of us to hang on just as long as possible. It is not uncommon to hear some one say, "I don't care to live to be old," but I never saw a man die who would not have given much to linger longer in this beautiful world.

As an abstract proposition, dying isn't much more than a great adventure, but as a definite, inescapable and immediate experience, it is dreaded by the best of men. Therefore, we study with interest, if not with enthusiasm, every formula having in it the hope of extended life.

The rules proposed by the doctor are the following:

Do not eat too much.

Do not drink too much, especially of intoxicants.

Do not work too hard or too many hours.

Do not work too little; better to work for nothing than be idle.

Do work that is for the common good; all other is destructive.

Take just what sleep experience proves right.

Use recreation not for its own sake, but for new vigor.

Do not always be in a hurry.

Dress first for comfort; then for style.

Avoid worry; it enfeebles mind and body.

Shun all trespassers against the plain physiology of your existence.

And thus lay the surest foundation for life of the spirit here and hereafter.

Those are good rules. One could not go far astray who lived in harmony with them.

They indicate a simplicity in eating and living which is essential to health and happiness. The more complex the life and the more multiplied the dishes at the table, the shorter will be the career.

While many of these rules are those commonly given, there are others not so much discussed. Hurry, striving after extreme style in dress, enfeebling the mind by the overworking of worry, the joy of work rather than of idleness, the transgression of laws of the body—in each of these suggestions is a whole sermon of health and long life.

Of late we have read of many 100th birthdays. They will become more common. It is humanly possible to plan a life which, barring accident, may run a century.

Read these rules and take your place in the procession of centenarians.

A good old Friend

Remember the good old-fashioned mustard plaster grandma used to pin around your neck when you had a cold or a sore throat?

It did the work, but my how it burned and blistered!

Musterole breaks up colds in a hurry, but it does its work more gently,—without the blister. Rubbed over the throat or chest it penetrates the skin with a tingling warmth that brings relief at once.

Made from pure oil of mustard, it is a clean, white ointment good for all the little household ills.

Keep the little white jar of Musterole on your bathroom shelf and bring it out at the first sign of tonsillitis, croup, neuritis, rheumatism or a cold.

Sold by druggists everywhere, in jars and tubes, 35c and 65c; hospital size, $3.

Northwest Ayrshires in List

Wenatchee Ayrshire farm in Washington, Earlcrest Stock farm in Oregon, and the agricultural colleges of both states figure prominently in the Ayrshire Breeders' association summary of high producing cows on official test during August. This is known as the "Ayrshire 50-pound fat list." There are 162 cows of all ages from all parts of the country on it, and, while only 10 of them are from Washington and Oregon, 4 of the 10 head their respective classes, and other animals from the northwest rank well up. E. W. Van Tassell owns two of the class leaders and Oregon Agricultural college two.

The junior 4-year-old list is headed by Oregon Robinetta, owned by O. A. C., which produced 66.72 pounds, and contains also the name of Ester Marea, the property of Earlcrest, which made 54.73. The requirement for this class is 45 pouds. Queechie's Robin Hood of Wenatchee heads the list of 11 junior 3-year-olds that produced 40 pounds or more and Lady Scott of Wenatchee that of 24 senior 2-year-olds producing 37.5 pounds or more. The former made 70.09 pounds, 11 more than her nearest competitor, a Maine cow, and the latter 58.5. Both are owned by Van Tassell, as are Queechie of Wenatchee (49.47 pounds), one of 10 senior 3-year-olds that made 42.5 or more, and Stewart Girl of Wenatchee 2d (49.49 pounds), that was fifth in the junior 3-year-old list. The 23 junior 2-year-olds that produced 35 pounds or more are led by Oregon Panetta J., owned by O. A. C. and producing 52.9 pounds, and the same institution owns Robin Hood's College Douglass, one of 64 mature cows making 50 pounds or more. She produced 55.63. In the same group is Willowmoor Ila, 51.19 pounds, and among leading senior 4-year-olds is Chinook Peter Pan Bessie, 55.31 pounds. Both are owned by Washington State college.

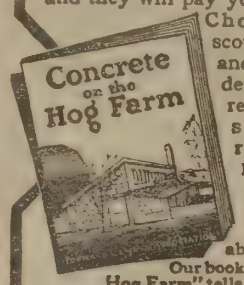
PLEASED WITH HERD SIRE.

"I believe I have the best sire in this fellow that I ever owned," said George O. Swales of Johnson, Wash., referring to the boar whose picture is shown herewith. He is Great I Am 1st, and is now in the aged boar class, though he was but a senior pig when this picture was taken. Mr. Swales bought him in the middle west in September, 1921, and showed him at the Lewiston fair and at the Western

Royal and Pacific International that season. He was junior champion at both the big shows and grand champion at Lewiston. Mr. Swales has not been on the show circuit this season, but a considerable number of this boar's pigs have been shown by Earl Harper and Frank P. Busch of Johnson and have captured a liberal share of prizes. Mr. Swales is immensely pleased with this sire, not only because of his proved show qualities, but because of the quality of the pigs that he has already sired.

WANT HOLSTEIN FIELD MAN.

A high-class Pacific northwest Holstein field man, to cover the three states of Washington, Oregon and Idaho and possibly British Columbia, will be at work by January 1, 1923, if plans mature which were discussed at a Portland stock show week conference between W. A. Moscrip of St. Elmo, Minn., chairman of the national Holstein Breeders' association committee on extension, other breed leaders from the east, and breeders of the three states concerned. At present the national association turns back to breeders of the respective states 50 cents of the amount paid for each transfer of a registered Holstein within that state, to be used for extension purposes. It proposes, provided northwestern breeders will renounce their claim to this money, to put with it enough more to pay the salary and expenses of an extension specialist who would devote all of his time to promoting the breed's interests in the territory. The urgent need of employing such an agent was generally recognized at the conference, and it is understood that sentiment among exhibitors at the Pacific International was practically unanimous for adoption of the proposal.



BUY CALF FOR COLLEGE.

A heifer calf sired by Khedive Kitchener of Soquim Prairie, junior champion Guernsey bull at the 1922 Pacific International, was purchased from Ben H. Ridgway of Sequim, Wash., by 1921 short course students and presented to Washington State college. On this small foundation is expected to grow a state herd of purebred Guernseys.

More Money From Hogs!

Free Book on Sanitary Improvements Shows How to Prevent Loss from Disease and get larger Profits

Healthy hogs are the real money hogs. And they don't just "happen." Healthy hogs are the result of healthy surroundings. Treat your hogs right and they will pay you more.

Cholera, white scours, pneumonia and worms are developments directly due to unsanitary surroundings.

Prevent disease and save feed by providing your hogs with clean, warm, comfortable quarters.

Our book, "Concrete on the Hog Farm" tells how to build permanent, sanitary improvements. Some of the subjects covered in this book are—Hoghouses, Feeding floors, Hog Wallows, Troughs, Waterers, Corncribs, Dipping Vats, Brine Tanks, etc.

Plan your improvements NOW. Send for this Free Book and know how to save on replacements and how to build for all time. Address office nearest you.

Every Poultryman

FINDS THIS "PAY-STREAK" SOONER OR LATER

EVERY good hen is a mine—a golden mine of eggs. This mine will yield a certain revenue even if you go at it hit-or-miss. But, you can never expect to get the greatest yield—to strike the real "pay-streak"—until you tap the right vein. *And that's feed!*

No matter how carefully selected your stock may be—no matter how good the housing and care you give them—sooner or later you will "dig down" to this rock-bottom fact: feed is the nub and the rub of the situation.

Even the big poultry operators who have been mixing their own feeds and have switched to SURELAY will tell you it's the "cheapest" feed in the long run—cheapest because it nets *more* egg-money in return for the feed-money it costs.

These seasoned poultrymen realize—as you must—that a hen uses more energy in converting poor feed into money than she does in converting good feed into money. And, at that, how little is the difference in cost between good feed and poor feed! But look at the difference in the egg-sheet when you're through!

SURELAY has helped to put many a poultryman on his profit-feet by proving two things to him: First—that cheap feeds lessen the profits of every hen in his flock; second—that our large scale production enables us to turn out a better and more economical feed than he could hope to.

Blended and balanced according to a true-to-test formula, SURELAY stands top-high as a uniform egg mash that will make your hens pay by making them lay. The best way is the find-out-way. Order a sack of SURELAY from your dealer—and see! See how this high-grade mash "assays" in feed value. See how our daily laboratory tests insure the same feed value every time. See how SURELAY actually "pans out" with your flock. See how it rids your mind of feed-worry for all time. For "what's on the tag is in the bag"—always!

Also, send for the new edition of our booklet, "Makes Hens Happy." It is by far the most complete and helpful book we have ever issued on poultry feeding. And it's free! Simply clip the coupon—and mail today!

Douglas County
Still on the Map Agriculturally

It has been the habit in some quarters to exaggerate the effects of the drought in the Big Bend country. There have been those, including bankers, farmers and business men, who have given currency to the report that 80 per cent of the wheat land in Douglas county, amounting, it is alleged, to about 146,000 acres, would remain unseeded this season.

The state department of agriculture explains that this was the estimate based on a survey made two months ago by a man representing commercial organizations interested in the future of the drought stricken areas and that probably the figures for Douglas county were based on the amount of land formerly in cultivation and that the 80 per cent had reference to the spring wheat land that would remain unseeded.

In answer to all this the county agent in Douglas county, F. H. Zentner, makes the following statement:

"There has been seeded in Douglas county fully 120,000 acres of fall wheat, and there remains unseeded not to exceed 40,000 acres, which, however, has practically all been prepared for spring seeding. A letter has been received from Congressman J. Stanley Webster stating that he will use every effort to secure the passage of the seed loan bill, which will enable wheat farmers in this state to secure federal loans for the purpose of purchasing seed, similar to what the government has been doing in Montana and other states. If this bill goes through it will be possible to seed practically every acre of land in the county suitable for growing wheat.

"Douglas county wheat prospects are the best ever known. The fall wheat made a good stand and is now covered with a mantle of snow that promises to last all winter. The largest percentage of fall wheat in the history of the county has been seeded, the largest percentage of summer fallow in the history of the county has been seeded, and Douglas county has a larger percentage of summer fallow sown to fall wheat than any other county in the state. While it is true that a small acreage of land formerly seeded to wheat in the county has been abandoned, the land remaining is in better shape than ever before and 75 per cent or it has already been seeded to wheat that is new in better condition at the beginning of winter than ever before. General prospects are more favorable than at any previous time during the past six years."

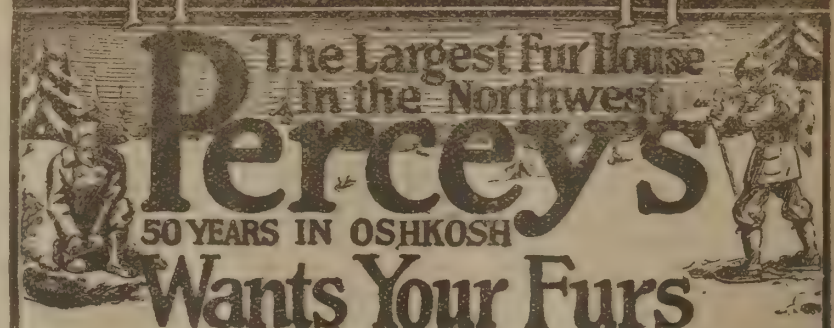
New Company
Organized to Operate Canneries

The recent organization of the Pacific Consolidation company has just been announced as the new concern which is taking over the old Puyallup. The new company has an authorized capital of $3,000,000, most of which comes from Oregon and Washington men while some of the stock is held by California people. It is to act as a holding company for these canneries and will probably take in other Pacific coast interests.

The canneries were operated by the Pacific Northwest Canning company last season, which company leased the plants and will operate them next season under the same management. The new company, however, intends to keep the plants in operation in the future and will also manufacture jams under the already well advertised brands.

The results of the last season have been exceptional and are due largely to the constructive policy carried out by the members of the company. There was also an unusually good growing season last year and the growers gave some splendid cooperation. The canneries put out the largest pack in the history of the valley, paid the members cash for their berries, marketed the entire year's output and employed nearly 600 factory hands in the two plants during the rush season.

"We want to encourage the growers to look into our problems and learn more about what we need in order to put out a product that will take well with the consumers," said Mr. Pfeiffer, sales manager of the company. "The growers are beginning to see that they must pay more attention to the problems of the canneries and not get prices that are so high they will kill their own business."



The officers of the new company are as follows: W. G. Allen, president; G. H. Bradt, first vice president; W. J. Vary, second vice president; A. F. Pfeiffer, sales manager; G. W. Haney, assistant secretary-treasurer.

WASHOUGAL DRAINAGE PROJECT.

The Washougal drainage project was assured recently when the Clarke county commissioners decided to establish the diking district. A vote on the proposal was taken among the property owners who attended the hearing and all but one favored the reclamation.

The project is the second largest ever attempted in Clark county. Two thousand acres are to be reclaimed at an estimated cost of $119,000.

Trappers-Fur Shippers

The Largest Fur House In the Northwest

Percey's

50 YEARS IN OSHKOSH

Wants Your Furs

Exactly fifty years ago Percey's Fur House was established at Oshkosh to barter with the Indians and other trappers. Percey's fair treatment and square deal policy built such a reputation that trappers went out of their way to secure Percey's prices. A man's word was as good as his bond in those days, and through the northwest Percey's word was "as good as gold." It still is.

Howard Steps Down from Farm Bureau Presidency

National Convention Raps Ship Subsidy; Bradfute of Ohio Is Elected President; Howard May Become Member of Reserve Bank Board

After serving as president since the formation of the American Farm Bureau federation, three years ago, James R. Howard of Clemons, Iowa, last week declined to accept nomination for a fourth term. The annual convention of the federation at Chicago thereupon elected unanimously Oscar E. Bradfute of Xenia, Ohio, as president. Mr. Bradfute has been vice president of the organization and a leader in its activities since its formation. W. H. Walker of Willows, Cal., was elected vice president to succeed Bradfute.

May Go on Reserve Board.

In connection with Mr. Howard's refusal to stand for reelection as president of the farm bureau federation, the following press dispatch from Washington, D. C., apparently confirming rumors that have been more or less current, is significant:

"J. R. Howard of Clemons, Iowa, ex-president of the American Farm Bureau federation, is slated for appointment within the next few days as the 'dirt farmer' on the federal reserve board, according to information reaching representatives of agricultural associations here.

"It was asserted that President Harding had made up his mind to appoint Mr. Howard and that the nomination might be expected to reach the senate this week."

Several months ago, the publicity department of the American Farm Bureau federation announced the organization's approval of the proposed ship subsidy bill, which was then in course of preparation and which is now before congress for early action. President Howard, at the same time, expressed himself, as head of the organization, as favoring the enactment of the subsidy bill. "While the American Farm Bureau federation is opposed to any subsidy in principle," said the farm bureau statement at that time, "we realize the necessity for development of the American merchant marine as a naval auxilliary and agent in the development of foreign trade. We approve it temporarily, until our flag can be established on the high seas, and no longer."

In this connection the action of last week's national farm bureau convention in condemning the ship subsidy bill is especially interesting. The resolution of condemnation in part follows:

"Inasmuch as it has been the general policy of this country to subsidize railroads by land grants and granting of special privileges, manufacturers by a protective tariff, and as it is now proposed by those in charge of our general policy to subsidize our shipping interests by payment to them of a bonus—for all of which the consumer must foot the bill, we emphatically protest against the continuance of a policy which has become confiscatory instead of protective."

Deplores Factional Politics.

In declining to accept renomination as president of the bureau, President Howard is reported to have condemned politics in the organization. A Chicago report quotes him as saying that political manoeuvering had hampered the work of the organization for the last two years and that politics had been a large cause in the failure of the executive committee to cooperate with the president; that it was a shame that wire-pulling and factional caucauses had kept many of the delegates busy when the time should have been devoted to convention business.

In relinquishing the position of president of the farm bureau federation and bespeaking for his successor the loyal support of members and officials, Mr. Howard said he considered the presidency of the federation second in importance from the farmers' viewpoint only to that of the United States.

Wants Tariff Improved.

The federation declared war on the Fordney-McCumber tariff act and asked for an immediate investigation of tariff rates on all imports bought by farmers and an immediate reduction of such rates to such lower levels as shall only equal the differences in the cost of production here and abroad

Lifting of the present 3 per cent immigration law to admit qualified aliens for the relief of a "continuing shortage of farm and industrial labor" was among the other recommendations made.

Several resolutions adopted by the convention are summarized as follows:

1—Repair and addition of new railroad equipment sufficient to prevent another car shortage.

2—Further reduction of freight rates "until they shall be brought into proper working relation to the purchasing power of farm crops."

3—Development of a well-rounded transportation system by both state and national governments, through highway improvements and the opening of waterways, including the Great Lakes-St. Lawrence channel.

4—Greater freedom for "the private initiative" of railroads.

5—Amendment of the transportation act to permit railroads to share in periods of depression and prosperity, instead of receiving a fixed return.

6—Limiting the power of the interstate commerce commission and restoration to the various states of control over intrastate traffic and rates.

7—Appointment of a public commission to study the national transportation problem.

A resolution was adopted urging the senate to enact the Voight bill, prohibiting interstate commerce milk substitutes. The truth in fabrics bill was also approved.

Legislation was asked requiring federal reserve banks to pay member banks "the customary rates of interest consistent with good banking on all deposits."

Orchardists Dislike Too Much Federal Supervision of Grades and Packs

The Washington State Horticultural association and the Northwest Grade and Pack conference in session at Spokane, went on record December 14 with a resolution that the state's representatives in the national congress be instructed that the association would look with disfavor upon any legislation to further weaken the state's powers in the shaping and administering of horticultural grading rules. The resolution read:

"Resolved, That as this association has found the present inspection contract of cooperation with the United States department of agriculture and the state department of agriculture in the inspection and certification of fruit and vegetables offered for market satisfactory and helpful the members of congress be informed that we look with disfavor upon the enactment of any law that will change this contract or weaken the power of the state in such contract or inspection and standardization work, and ask also that a bill be enacted that will permit the issuance of federal certificates upon state grades as per present contract."

The action was taken following an address by Edward L. French, state director of agriculture, before the state horticulturists and the Northwest Grade and Pack conference. Authority over matters which Mr. French deemed within the province of the state's control had recently been conferred on the federal bureaus through a rider on an appropriations bill, he said, notwithstanding that legislation especially designed to transfer such powers to the federal government had failed of enactment. The temporarily enjoyed bureaucratic authority will expire with the end of the fiscal year covered by the appropriations, but there is a movement, said Mr. French, looking toward the reconferring of those powers upon the federal government.

State Ready to Cooperate.

"In other words, the state is willing really to cooperate with the federal department of agriculture in all of this service of inspecting fruit at the points of shipment, a service which my department has been rendering for years and which the federal authorities are now just commencing to undertake," said Mr. French. "But I do not think it is to the interests of the fruit industry of this state for the federal inspection service to assume the position that it is to become paramount, to have authority over the state service and to devise and impose new regulations, or to override the decisions of the local men in every dispute that comes up. You may think it fanciful that I should anticipate the possibility of such demands being made by this federal inspection service, but the fact is that just this is precisely what has happened in the grain inspection service, into which the federal authority was extended, ostensibly in cooperation with the state, long after the state had established its service, and wherein now recently appointed civil service clerks can, at will, override the rulings of state employees who have been grading and inspecting grain for years, and in instances work a very substantial injury to the grain growers and grain dealers of this state through the exercise of the authority thus claimed.

Sees Too Many Bureaus.

"I could go into details to show you where the federal government with multiplying bureaus is not only taking from the people sacred rights, at a cost many times greater than that at which the same service can be performed at home by state, county or local committees, but is positively stifling industries in so doing.

"The Constitution given us by our forefathers at so great a cost intended government of the people and by the people. The number of government bureaus, out of the reach of the voters and taxpayers, has no place in our system, nor should they be taken too seriously by the American people."

Federal Man Speaks.

Sherman Wells of the federal bureau of markets being unable to attend the conference, F. S. Kinsey, charged with supervising for the federal department the certification of Washington and Oregon shipments, presented the federal bureau's aims in its inspecting and standardizing activities. It was not the desire of the federal bureau, he said, to bind the individual state by one hard and fast set of grading rules, but to stabilize from year to year the grades in force within the state and to effect uniformity for the three northwestern states of such grades. This he represented as in the interests of shipper, market official and the bureau. Eighteen states, he said, are now cooperating with the federal government in the work of shipping point inspection, and in few others are there state provisions for such inspection. In states not having such provision for inspection the service is performed seasonally or at intervals by federal inspectors called in at the request of the shippers.

Other Resolutions.

The resolutions of the conference included (1) the aforementioned one addressed to the state's representatives in congress; (2) one favoring such laws and regulations as may best prevent the recurrence of losses which fruit growers have suffered in the past through railway and coal strikes; (3) a resolution urging continuance of the federal appropriation for the work of D. F. Fisher of the United States department of agriculture upon orchard problems at Wenatchee.

The recommendations of the legislative committee were voted upon separately. One asked for an appropriation for the state experiment station work of the state college, apportioned separately from other state college funds, in view of the fact that increased enrollment had made necessary the use for purposes of instruction of those funds originally meant for experiment. This was adopted. The second, a proposal to petition for a 40-mill tax limit on assessed property values, or a 2 per cent limit on full values, was tabled.

Resolutions were passed also in appreciation of the state director of agriculture's and the supervisor of horticulture's work in the interests of the horticultural industry.

Omit Unnecessary Grade Conferences.

The grade and pack conference that followed the meeting of the horticultural association was not largely nor enthusiastically attended. By a vote of about three to one the delegates decided to dispense with the annual conferences on the ground that many of them were unnecessary. Hereafter conferences will be held only when petitioned for by orchardists owning an aggregate of 25 per cent of the bearing trees within the conference.

"This is not abolishing the conference," said one grower, "but abolishing its unnecessary sessions."

A change in the state law will be necessary to provide for the new terms of convening of a grade and pack meeting, and a committee was duly appointed to petition the legislature to effect the necessary modification. The new plan was advocated as being to the interest of the packer and making for economy in inspection of the fruit crop, as well as affecting a saving of time to those attending the annual sessions of the horticultural association, the grade and pack conference usually being allowed an extra day's session.

Grades Slightly Changed.

The grade and pack conference adopted for the 1923 season, and apparently for an indefinite period unless a conference next year is petitioned for as above provided, the same grade and pack rules as have been in effect during the last season with one exception. The change is that no stings whatever shall be allowed in the fancy grade of the red-cheeked, or blush, and the green and yellow varieties.

The conference also went on record as desiring the horticultural division of the state department of agriculture to prepare an official definition of a sting, and to make it so stringent as to rule out every sting which, including the inflamed surroundings, shall be one-eighth inch or more in diameter.

Potato Grades Later.

At the end of the last afternoon's session of the conference prospects for a representative attendance at the scheduled potato grade conference in the evening were so poor that State Horticultural Supervisor C. L. Robinson entertained a motion to adjourn, which was adopted. A potato grades conference will be called for some ensuing date, and possibly for convention at some other point. A Yakima delegate present declared that there would be strong effort made to attract the potato grades conference to that city or valley.

The New Officers.

Officers newly elected are: President, Colonel Paul Weyrauch, Walla Walla; first vice president, R. T. Reed of Bellevue, King county; second vice president, M. L. Dean, Wenatchee. J. L. Dumas and Professor O. M. Morris will succeed themselves as directors. The secretary-treasurer appointed by the board for the year was C. L. Robinson of Olympia.

Colonel Weyrauch, newly elected president, set before the convention the plan upon which auxiliary county or local organizations may be effected. Ten members of the state organization may constitute a nucleus of membership empowered to appoint a chairman for such an auxiliary association. Said chairman will upon their application be at once appointed a vice president of the state body. Any papers read before the sessions of the state horticultural association will be available in copies to the auxiliary branches for reading and discussion at their local or county sessions. It is through such suborganizations that membership in the state organization is made most effectual, it was set forth.

Recognize Excellence of Fruit.

It is seven years since the American Pomological society has deemed it fitting to award for a plate exhibit of apples a medal such as it conferred upon Washington apples this year. The exhibit was one selected from the fruit at the recent show in Seattle. Plates of six each of Washington's 35 leading varieties were prepared by J. L. Dumas of Dayton and Reed of Bellvue and sent to the annual conference of the society. The verdict was inscribed on the medal and constitutes, in the words of Mr. Dumas, who told the convention of it, "the opinion of the highest horticultural authority in the United States," as to the superior excellence of Washington's apples.

The horticultural conference included an elaborate program of addresses by horticultural authorities and scientists, as well as practical orchardists throughout the district.

Injury to the apple crop by codling moth this year was declared by C. L. Robinson of the state horticultural inspection service to have affected at least 5 per cent of the crop. Indications are of a heavy worm infestation next year. This must be made a community problem, in Mr. Robinson's judgment. Where orchard pest district organization had been previously effected under Mr. Darlington an extremely low percentage of wormy fruit had been the result at the season's end. Mr. Robinson will cooperate with growers in regions desiring to organize districts, furnishing them with the provisions of the Colorado local improvement districts law, which has valuable suggestions. It was advised that districts be organized to cover, individually, very small areas, perhaps not more than 1800 acres, and that the requirements as to protective measures on the part of every grower within the district be absolute. Smallness of the districts would render the enforced measures closely applicable to the needs of the district. Regional variations in season greatly affect the conditions of proper spray application, etc., it was pointed out in discussion.

Must Have Power.

Pest control requires police authority behind control measures, declared Secre-

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Tidings of Joy to All People

AND it came to pass in those days that there went out a decree from Caesar Augustus that all the world should be taxed. And all went to be taxed, every one into his own city. And Joseph also went up from Galilee, out of the city of Nazareth, into Judea, unto the city of David, which is called Bethlehem, to be taxed with Mary, his espoused wife, being great with child. And so it was, that, while they were there, the days were accomplished that she should be delivered. And she brought forth her firstborn son, and wrapped him in swaddling clothes and laid him in a manger, because there was no room for them in the inn.

And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them and they were sore afraid. And the angel said unto them, Fear not, for behold, I bring unto you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. And this shall be a sign unto you: Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

And suddenly there was with the angel a multitude of the heavenly host praising God and saying: Glory to God in the highest, and on earth peace, good will toward men.

Hoover Hits Nail on the Head

Herbert Hoover is secretary of commerce, but his annual report to congress discusses farm problems as well as commercial problems. Mr. Hoover's interest in agriculture is not surprising, for, while he is not the secretary of agriculture, he was food administrator during the war and his duties in that office and his experience as director of American relief agencies in the starving regions of Europe gave him a grasp and understanding of world agriculture.

Mr. Hoover tells congress and the country that inequalities continue in the price levels of farm products and other commodities, and between wage-earners and farmers.

"Some relief," he said, "could be given to the farmer by readjustment of railway rates in such a fashion as to impose larger burdens upon high priced commodities and lower rates on primary produce. A greater relief would be given if he were provided with adequate transportation. Further relief would be given by the provision of an adequate credit system to meet his needs of loans for periods in excess of federal reserve facilities and at nearer the commercial rates of interest."

In these few words Mr. Hoover says more that is to the point, constructive and workable than most of the senators and representatives who have been orating on this question have said in their long and wearisome speeches. The farmers need adequate transportation, and they need a revised basis of rate making which, as Mr. Hoover says, should lower freight rates on "primary produce," like grain, live stock, hay, potatoes, fruits and other bulky farm produce.

That is the need of American agriculture in general, but it is the special need of the farmers of the Pacific coast and intermountain states, who are remote from the large markets, and, therefore, are grievously burdened by high rates.

It is cause for regret that Mr. Hoover is not endowed with greater powers. There are moments when we almost wish that he could be given as free a hand in working out the solution of our farm and transportation problems as he had when he was the country's food administrator in wartime.

Protect Your Good Seed

It is a great mistake to plant newly acquired seed potatoes beside your own carefully guarded and rogued seed stock. Likewise it is just as dangerous to plant clean seed alongside the field of commercial potatoes, for diseases of many kinds are likely to manifest themselves in the unrogued commercial field. When one has secured or developed clean seed stock it should be guarded as zealously from infection as the successful orchardist would guard his fruit against codling moth or the live stock man his cattle against blackleg.

More Silos

Silos are a growing factor in dairying. For example, there are now 38 wooden hoop silos in one (King) county, all of which have been built during the last five years. County Agent Nystrom reports that four of these have been put up within a year.

LOOKING INTO OTHER FARM FIELDS

Porto Rico shipped 412,644 boxes of grape fruit to the United States in 1920.

* * *

The Virginia peanut crop is turning out short in quantity but of good quality, but mostly of the small sizes. Jumbos will be scarce.

* * *

New Zealand declares a decrease of over 1,000,000 sheep this year as compared with 1921 figures. This is attributed to the growth of dairying in districts hitherto devoted to sheep runs.

* * *

Beef, mutton, and pork have risen over 100 per cent in Guernsey in 60 days, while slaughter house fees have risen 200 per cent. Meat which formerly sold for 18 marks per kilo is today bringing 260 marks is the report.

* * *

The western New York onion season has been delayed by excessive moisture during the growing period. Some fields were ruined. Shipments have been only 1200 cars, compared with about 2000 last year, and sales at loading points have brought returns far below those of 1921.

* * *

Up to the end of September a total of 134,839 barrels of apples was shipped through Halifax, Nova Scotia, to the markets of the United kingdom. This is a record start, and double the shipments for the same period a year ago, when only 69,249 barrels, were shipped.

* * *

There are 3000 commercial orchards in the Okanogan valley, British Columbia, bearing approximately 1,000,000 trees, according to the latest statistics. It is estimated that 3172 carloads of apples and 4105 cars of all kinds of fruit will be exported from the Okanogan district this year.

* * *

The output of beet sugar for 1921 showed an increase in volume, but a decrease in value, as compared to 1919, according to figures compiled by the census bureau. In 1921 production totaled 1,018,700 tons, valued at $127,103,000, while that of 1919 was given as 721,900 tons, of a value of $138,000,000.

* * *

Charles E. Gunnels has resigned as treasurer and director of organization for the American Farm Bureau federation, to become national extension director for the American Institute of Agriculture, Chicago, the market training organization of which George Livington is director. J. R. Howard is chairman of the advisory council.

* * *

Japanese imports from Germany have been increasing and are now greater in volume than before the war. For the year ended May, 1922, Japanese imports from Germany amounted to over $40,000,000, an increase of $11,000,000 over the 1913 import. The main items of import from Germany are: Strings, ropes and materials therefor; dyestuffs, paints and colors; metals and manufactures of metal; clocks, watches and scientific instruments; chemicals and explosives. But small amounts of a large number of other classifications are also imported.

State Farm News

For the first 10 months of this year Tacoma has exported nearly $10,000,000 worth of flour, as well as 102,910 tons of wheat.

* * *

Apple packing at the C. M. Kopp warehouse at Yakima was finished December 9. More than 50,000 boxes of fruit have been turned out.

* * *

Yakima officials claim that the county takes the fourth place in the state in the matter of automobiles operated. Yakima county owners contributed a total of $217,195 to the state in motor license fees during the past 12 months.

* * *

The King's lake fish hatchery at Newport is completing gathering the largest number of eastern brook trout spawn in the history of the hatchery. One million five hundred and sixty thousand eggs have been taken so far this season.

* * *

J. H. Kineth & Son of Coupeville, Island county, recently purchased six head of Hampshire ewes from the A. J. Flemming herd of Sunnyside, Wash. The Kineth farm now has Guernsey cattle, Hampshire hogs and Hampshire sheep all of which are purebred animals.

* * *

Frank Starkey of Benton county is shipping 2000 white Leghorn pullets about six months old to the government experimental stations at Honolulu, Hawaii. The shipment is routed by fast express to San Francisro, where the birds will be put aboard a steamer for their destination.

* * *

The Snohomish creamery, owned by J. W. Sutherland and G. A. Sutherland, has been sold to Fred H. Anderson of Bothell and Mr. Henry of Seattle. Mr. Anderson was formerly of the Homestead dairy in Everett and Mr. Henry has been in the dairy business in Seattle. J. W. Sutherland will continue in the poultry business.

* * *

A crop of field corn was planted on a sheep feeding lot at the Prosser irrigation branch of the state college experiment station. The yield was between 60 and 70 bushels to the acre, but the best results was noticed in the growth of the stalks, which grew to a height of 12 feet or more. All of the manure had been taken off of the lot before the land was plowed in the spring.

* * *

Alfalfa sod of 1910 seeding has been plowed four inches deep at the Prosser irrigation branch of the experimental station. The ground will be given a top dressing of sheep and cow manure and plowed again in early spring before planting to corn. The spring plowing will be deeper, but the alfalfa crowns will be put deep enough to miss the cultivator.

* * *

Timber on 400 acres of the state capitol grant near Oakville, in Grays Harbor county, has been sold by the state capitol committee to the National Lumber and Manufacturing company of Hoquiam for $66,298.25, the appraised value. Timber on the tract cruised 23,268,000 board feet. Fir brought $3 a thousand, cedar $2.75, spruce $2 and hemlock $1.

* * *

The Dayton Commercial club has elected the following officers:

Roy R. Cahill, president; J. W. Jessee, treasurer; D. A. Nichols, Edward Davis and W. H. Younger, house committee, Fred Norris, E. A. Holmes and Grover Israel, entertainment committee. A secretary will be named later by the officers.

* * *

R. S. Brown, manager of the Yakima branch of the Washington Cooperative Egg and Poultry association, says at least half of the laying hens of the county will be signed up with the association by January 1. He estimates there are about 125,000 laying hens in that district. Mr. Brown says it will be necessary for the association to have at least the product of 50,000 hens to be self-supporting.

* * *

Captain A. W. Reed, a veteran Willapa harbor pilot and shipping man, has purchased the South Bend cannery plant from Theodore Myers. The property includes 325 feet of valuable waterfront property. On it are two large buildings and considerable dock space. Captain Reed will turn one building into a marine and auto repair shop. Part of the dock will be cut away and a marine ways will be installed. The other building will probably be used as a warehouse.

* * *

E. R. Wells, owner and manager of Henacres ranch at Prosser, received an order recently for 10,000 baby chicks, $1900 cash accompanying the order.

Henacres produces a special strain of White Leghorn fowl, which are widely known as Henacres Leghorns. Orders for 60,000 baby chicks have already been recorded for 1923 delivery, and an output of 175,000 is expected for the season. This will mean an increase of 50 per cent over the output of 123,000 for the year 1922.

* * *

The Grays Harbor Beekeepers' association has a busy program before it for the coming year. It is planned to make a survey of beekeeping conditions in the county in 1923; to conduct a campaign which will reduce bee diseases by 50 per cent; to reduce box hives 50 per cent; to introduce 1000 queens to colonies, replacing common stock as a means of eliminating foul brood; to organize at least one more boys' and girls' bee club before December, 1923, and to augment the one already functioning at Elma.

* * *

The department of conservation and development now expects to establish a new record in the development of the Wolf creek project in the Methow country, Okanogan county, according to a report from Olympia. While only 1000 acres are to be brought under water, the project presented the problem of constructing a storage basin, building and lining flumes, preparing the ground for water and getting under way. It is expected crops will be harvested next year from 50 per cent of the land affected, though construction work was not started until October of this year.

Coming Events of Interest

Jan. 3—Northwest Poultry show, Seattle.
Jan. 8—Chelan Poultry show, Wenatchee.
Jan. 15—State farm bureau meeting, Walla Walla.
Jan. 22-23—Washington wool growers, Spokane.
Jan. 22-26—Inland Poultry show, Spokane.
Jan. 24-26—National wool growers, Spokane.

FARM BUSINESS AND MARKETS OUTLOOK

A PERIOD of rapid price inflation before winter is over is predicted by the Brookmire Economic Service, another of the business forecasting agencies. The signs upon which this conclusion is based, in substance, are as follows:

The basic symptoms, such as speculative activity, physical volume of goods entering the domestic market, the ratio of imports to exports, turn over of bank deposits, commercial paper rates and foreign money rates indicate a further price rise.

High wages in the coal mining industry seem certain to continue for at least another year which means that coal, an important factor in manufacturing and transportation costs, will remain high.

Wages of workers in the building industry and railroad industry which are entirely out of line with those in other industries are not apt to be disturbed until the next period of business contraction.

Already wages have been advanced by the U. S. Steel corporation and some of the independent steel companies and their lead is likely to be followed by employers in other lines.

Strikes during the summer left a low inventory of goods and the new tariff bill will prevent a rush of foreign goods to make up the deficit.

These factors are most potent in the case of manufactured goods, but if inflation occurs, farm products will be affected. With high wages, food and wool and cotton clothing will be bought in maximum amounts at prices higher than would be paid if wages were lower. To some extent, of course, higher prices for things farmers must buy will offset advances on their own products.

Cattle Market Holding Well:

Cattle prices in the last few days recovered the losses of the preceding week and gained additional ground. Receipts around the market circuit were about 5 per cent above the average for this season of the year, but there is little or no accumulation of beef in spite of competition from other meats. Receipts of westerns and Canadians are falling off steadily, helping the market for cows and heifers and lower grades of beef steers, as well as raising the price of stockers and feeders. A flood of cutters and canners was reported at a number of markets, marking the last stages of pre-winter clean-up and prices were sharply lower.

The price range is narrowing due mostly to fewer common steers and to greater demand for lower grades of beef. The bulk of steers at Chicago is bringing $8.50 to $10.25. Choice cattle are still selling above $13, one isolated load bringing $14 during the week. Most of the long-fed cattle are in and the Christmas demand will soon be appeased. On the other hand, there will be fewer common cattle in another month or two.

Eastern Shippers After Hogs:

Shipping demand mostly to the east is now taking about 25 per cent of the hogs at Chicago and is becoming prominent at other midwestern markets. As a rule, it becomes still heavier after the first of the year.

Prices are holding above $8 at Chicago as hogs are cutting profitably, but little accumulation of product has occurred as yet and domestic consumption and export demand are keen.

The movement to market will be at flood tide in the next six weeks. The low point in that period may be the lowest figure until next winter. Bottom may already have been touched. In any case, no pronounced decline from the prevailing level is in prospect.

Lamb Receipts Below Normal:

Receipts of sheep and lambs at the seven leading markets in the last five weeks have been approximately 1,022,000 head, compared with an average of 1,227,000 head in the corresponding period of the eight preceding years. Prices are holding with the Chicago top again at $15.60, and feeders up to $15. Holiday demand is a factor as well as the light runs.

Clipped lambs are numerous, but unless shorn early in the season they are seriously penalized as packers want the wool.

Wool Market Quiet:

The domestic wool market is quiet with only limited transactions between manufacturers and dealers. Manufacturers have moderate stocks, but with the 1923 clip four or five months away and the opening of the heavy weight manufacturing season shortly after the first of the year, the situation does not favor lower prices. More interest is being shown in medium and coarse wools than in fine wools. The London auction continues with merinos 5 to 10 per cent lower than in October, and crossbreds 15 to 20 per cent higher. Some American buying is reported. Declines of 5 to 10 per cent on merinos occurred at Brisbane, Australia, last week, but crossbreds were steady to 10 per cent higher than in November.

Wheat at Season's High Point:

Wheat prices advanced last week to the highest point since the new crop began to move. The upturn bears some of the ear marks of speculative activity based on prospects of government assistance in the exporting of wheat through the extension of foreign credits. Tangible foundations for the rise were not wanting, however.

World statistics upon wheat, based on potential requiements are bullish. The International Institute of Agriculture estimates that the supply for export in exporting countries including carryover and new crop surpluses was 947,000,000 bushels. The requirements of importing countries for the year ending August 1, 1923, if they are to maintain the same apparent consumption as in the previous year, would be 923,000,000 bushels leaving a surplus of 24,000,000 bushels at the end of the European crop year. Actual takings by these countries in the last four months have not been at the rate suggested by the foregoing figure nor is such a quantity apt to be taken, especially at the world price level which such a volume of purchases would bring about. On the other hand, the normal carryover in exporting countries at the end of the European crop year is about 150,000,000 bushels more than would be left as shown above were importing countries able to buy the full amount they need.

Neither in the United States nor Canada is there pressure of supply.

Higher prices next spring appear quite logical based on conditions now known. How the market will perform in the meantime depends on the workings of speculative energy, the attitude of Argentine growers, the continuation of rapid domestic disappearance, the possible extension of foreign credits, and the improvement of foreight financial conditions.

Wheat Helps Corn Market:

The corn market has been aided by the advance in wheat, but has not shown equal strength.

Oats prices advanced last week to the highest point since March, 1921, because of improved demand, the strength in other grains and realizaion that oats were intrinsically cheap.

Cash Grain Markets.

The range of cash grain prices for the week, ending December 13, was:

Chicago: Wheat—No. 2 hard, $1.21@1.25. Corn—No. 2 mixed, 71 3-4@74 3-4c; No. 3, 69 1-2@73 1-2c; No. 4, 68 1-4@74c. No. 2 yellow, 72@75 1-2c; No. 3, 71@74c; No. 4, 68 1-2@74 1-2c; No. 2 white, 72 1-4@75 1-2c; No. 3, 72@74c; No. 4, 68@73 1-2c. Oats—No. 2 white, 45@48 1-4c; No. 3, 23@46 1-4c; No. 4, 42@44 1-2c. Rye—87 1-4@91c. Barley—63@75c.

Seed Prices Maintained:

Timothy and clover seed prices have been well maintained recently. Most of the surplus, especially of timothy, has already been sold by growers and the remainder is in strong hands and is being held for higher prices later on.

Chicago, per 100 pounds—Clover, $16.20; timothy, $6@6.75.

Toledo, per bushel—Prime clover, $13.85; timothy, $3.41.

Feed markets have weakened, especially for high protein meals. Demand from consuming sections is not brisk, owing to mild weather and to a less profitable ratio of feed prices to prices of live stock and live stock products. Offerings of most feeds are liberal with shipments in transit quoted below deferred deliveries.

Prices Per Ton (100-Pound Bags) in Car Lots:

Chicago—Bran, $21.10; standard middlings, $24.50; flour middlings, $28.50; cottonseed meal, 36 per cent, $46.50; 43 per cent, $51; hominy feed, $30; gluten feed, $38.25; old process oil meal, $52.50; tankage, $65.

Heavier country loadings of hay and increased receipts as a result of a better car situation have caused an easier hay market. No pronounced decline is probable.

Prices Per Ton in Carlots:

Chicago—No. 1 timothy, $20@22; No. 2, $19@20; No. 3, $14@16; No. 1 light clover mixed, $19@20; No. 1 clover mixed, $18@19; No. 1 alfalfa, $24@26; upland prairie, $18@19; midland prairie, $13@15; rye straw, $12@13; oat and wheat straw, $10@13.

Egg Market Holds Up:

Egg prices were well maintained last week as the demand is broad, owing to the holiday season. Storage holdings on December 1, according to the preliminary report, were 3,258,000 cases, which is a smaller total than in 1919, but compares with a five-year average of 2,517,000 cases.

Poultry prices are holding fairly well as receipts are not exceptionally heavy and consumptive demand is excellent. Storage holdings increased less than usual during November.

Setback in Butter Market:

Butter prices at the leading markets advanced early last week because of reduced pressure from foreign butter but weakened sharply at the close because of a sudden increase in current receipts. The latter is hardly a result of an increase in production so that the weakness may not persist.

Purchases of foreign butter were much smaller than at first reported and an advance in the Danish butter market, together with higher Danish exchange, is likely to check further sales from that quarter for the time being at least. A little Canadian butter is coming to New York and Chicago right along, but pressure from New Zealand butter which is most apt to be a serious factory, has not been noticeable recently.

If pressure from foreign butter does not develop, the market should retain a fairly strong position.

Prices on 91 score fresh butter on December 13, were: Chicago, 53c; New York, 54 1-2c; Boston, 54c; Philadelphia, 55 1-2c.

Cheese Quiet, but Firm:

The cheese market has been quiet, but prices were steady to firm. Quotations at country points advanced during the week. Wisconsin production is running ahead of last year. Cold storage holdings in the entire United States on December 1 were about as expected, totalling 37,183,000 pounds, compared with a five-year average of 47,455,000 pounds.

Prices on No. 1 American cheese on December 13 were: Chicago—Flats, 27@27 1-2c; Twins, 26 1-2@27c; Daisies, 27@27 1-2c; D. Daisies, 27@27 1-2c; Young Americas, 27@27 1-2c; Longhorns, 27@28c; Square Prints, 27 1-2@28c.

Fruits and Vegetables:

Potato prices were practically steady last week, although some weakness was evident at shipping points. Total shipments from producing districts are declining, but are up to the average for this season of the year. Unloads at consuming markets have not declined so much and are rather heavy. Technically, the market appears to be getting in shape for a moderate advance. Idaho sacked Russets U. S. grade No. 1 were quoted at Chicago at $1.20 to $1.25 per 100 pounds sacked. Sacked Rurals and Pearls at Colorado shipping points were quoted at 30 to 35 cents per 100 pounds in wagonloads cash to growers.

Apple markets were weak for barrelled stock in the last few days, but steady on boxed apples. Shipments are of approximately average size. Northwestern extra fancy Jonathans, large sizes, are quoted mostly around $2.25 per box at Chicago, Delicious at $3, Rome Beauties at $2.50, and Spitzenburgs at $2.75.

The Grain Market.

PORTLAND, Ore., Dec. 16.—Wheat—Hard

(Continued on page sixteen.)

State Farmers' Union Holds Busy Session

The annual meeting of the Farmers' Union of Washington and Northern Idaho, held in Spokane December 12 and 13, was featured by the presence of Charles S. Barrett, national president, who attended several sessions of the convention and delivered a two-hour address to an open meeting on the second day.

Mr. Barrett's address was largely inspirational. He declared that never in the history of the farmers' union had there been from coast to coast a corps of officers so uniformly heart an dsoul in the work of the organization. He urged continued loyalty on the part of the members and on the part of officers to the long-established and fundamental principles upon which the organization is founded. He likewise praised the grange as a sister order, naming the grange and the farmers' union as the two outstanding farm organizations in America today.

Mr. Barrett reiterated his criticism of the farm bureau as outlined in his address at the National Farmers' union convention in Kentucky late in November and published in The Washington Farmer a few weeks ago. He declared that the farm bureau was not a bona fide farmers' organization in that its organization was inspired and directed by interests other than agriculture and that dirt farmers were not now in control. He declared that the ultimate failure of the farm bureau movement, which he predicted, would be the greatest disappointment in the history of the farming people of this country.

President J. Q. Adams, state president, in his message to the convention expressed sentiments similar to those of Mr. Barrett. He criticized the farm bureau not only on the ground that it was fostered by non-agricultural business, but on the ground that it had endeavored to monopolize the state college extension service and build up a membership on the supposition that one must belong to the bureau in order to secure the services of the extension workers.

President Adams was reelected to serve a second term and Secretary A. D. Cross was reelected to the position which he has held for many years. New members of the executive committee were elected as follows: Almer McCurtain of Davenport, R. H. McMillan, Sandpoint, Idaho, and A. C. Moore of Walla Walla. The two holdover members of the executive committee are H. J. Herman of Genesee, Idaho, and E. D. Knight of Wapato, Wash.

Adopt Many Resolutions.

A large number of resolutions were acted on by the convention. Among the propositions indorsed were the following:

The enactment of a stringent budget law to govern the activities of county officials.

The performance of work by municipal organizations at wages and prices for material no greater than those paid by private contractors.

Extension of the consolidated election law to apply to all counties in the state.

The repeal of the ½-mill tax levy for capital buildings and the like levy for the reclamation revolving fund.

The further combination of various departments of government in the state to prevent unnecessary duplication and to effect reduction in expenditures.

The making of a survey of the state school system with a view to revising the methods of school finance by legislation.

Consideration by the state legislature of means whereby farmers in drought-stricken portions of the state may be aided in securing seed for the growing of a 1923 crop of grain.

The indorsement of the Columbia basin irrigation project and the best efforts of northwestern senators and congressmen in its behalf.

The reenactment of the excess profits tax law repealed last year by congress.

The awarding by the government to Henry Ford of a contract to develop the Muscle Shoals nitrate plants in Alabama in accordance with the offer previously made by Mr. Ford.

The immediate repeal of the Esch-Cummins railroad law, which the resolutions committee interpreted as "guaranteeing the railroads a dividend on watered stock."

The collection by this government of all debts owed it by foreign nations.

The defeat in congress of the ship subsidy measure now before the senate.

The enactment of some form of an income tax law in this state to require those having incomes from intangible property to bear a more just share of government expense.

The prohibition of the issuance of tax-exempt securities.

The levying of a 3-cent per gallon tax on gasoline and other liquid fuels for gas-propelled vehicles other than those used in farm power.

Permission to counties to adopt the commission form of government when the people thereof desire to do so.

Attack Big Salary.

The recent increase of the salary of President Suzzallo of the University of Washington from $12,000 to $18,000 a year was roundly denounced by the convention. It was declared that this increase in salary was not in keeping with the present statewide demand for reduced expenditures in public institutions.

Further development of cooperative, or pool, buying of such supplies needed by the farmers as twine, sacks, fuel and farm machinery was recommended and favored by the convention. The pooling of credits and possibly the creation of a farmers' union credit association was a subject that also entered into the discussions.

In addition to President Barrett of the National Farmers' union President A. C. Shumway of Milton, Ore., of the Oregon union was present and addressed the convention, as did also State Master A. S. Goss of the Washington grange.

Committees that worked during the convention were as follows:

Resolutions and state taxation—J. M. Reid, chairman, Pullman; Halger Jurgenson, Wilbur; J. H. Smith, Ephrata; Fred Hungate, Pomeroy; O. S. Gossard, Toppenish.

Finance and organization—C. W. Booth, Nez Perce, Idaho; H. E. Kendal, Oakesdale; E. T. Taylor, Coeur d'Alene; A. C. Whisler, Spokane; C. J. Holmes, Sandpoint, Idaho.

Marketing and warehousing—R. E. Darling, Tacoma; L. P. Teat, Reubens, Idaho; Charles Wagner, Post Falls, Idaho; M. E. Jolly, Coulee; A. C. Rhinhart, Hartline; Arthur Cox, Colfax; Ben Finke, Craigmont, Idaho.

Orchardists Dislike Supervision

(Continued from page three.)

tary Dean. Experiment stations possess no power to enforce protective measures. There must be concerted action on the part of the orchardists themselves if they would protect their orchards from invasion by pest.

Tribute was paid to the late Barney (Don W.) Sugrue of Cashmere, a former president of the organization and a resident for years of the Wenatchee valley. Mr. Morris commended the fearlessness, frankness and optimism of Mr. Sugrue.

David Boteford of Portland spoke on the value of advertising. "But the minute you allow the quality and standards of your product to drop," he said, "your advertising trademark or firm name becomes a little warning to divert trade from your product. Advertising must be backed by quality in the goods."

Inadequate space renders it impossible to present fully any of the addresses delivered at the convention. Many are omitted entirely from this week's reports, but much of the information contained in them will appear from time to time in the future.

SKAGIT SEED CROP.

Members of the Seed Growers' association report more than 400,000 pounds of clean seed, the product for 1922 of about 100 Skagit valley farmers. This represents a value of $100,000 or more. Of the total amount, 184,000 pounds is beet seed and 108,000 pounds is cabbage seed.

Exclusive of contracts for spinach acreage, which will not be made until spring, the Skagit Valley Seed Growers' association has already contracted with individual members for 939 acres to be devoted to seed culture in 1923. This is a considerable increase over seed acreage for previous years.

YAKIMA APPLES IN STORAGE.

There are reported to be more than 4,000,000 boxes of apples in storage in the Yakima valley, as against about half that number last year.

3 " "	24	2 " "	16
2¾ " "	22	1¾ " "	14

* In 12-gauge loads only, use No. 2 Shot.

Dealers everywhere carry these standard loads of du Pont Powders, because they have found that a great majority of their customers demand them.

Du Pont makes powder—not shells. Du Pont Powders are loaded in every brand of shell. The name "DU PONT" or "BALLISTITE", printed on the carton and the top shot wad, tells you what powder you are shooting. Specify the powder when you buy the shell.

E. I. DU PONT DE NEMOURS & CO., Inc.
Wilmington, Delaware

We do not feel it necessary to "sell" any man on the quality of du Pont Powders. We do wish to point out that, to get du Pont safety, accuracy and reliability, you must find the name Du Pont or Ballistite on the top shot wad.

SHOOT DU PONT POWDERS

DU PONT

Pigs Make Profit on Small Farm

"It is hard to beat the brood sow when it comes to the economical clearing of logged-off land," remarked G. W. Bradshaw of Sumner, who has a small herd of Duroc Jerseys on his farm in the Mountain View district. "But it is my belief that when a farmer is raising hogs the animals should be purebred. It is actually cheaper to feed a registered animal, and then there is always the chance to sell one or two of each litter to the neighbors as feeders.

"Even for feeders, the purebreds will bring a better price because they fatten in less time than will the average scrub. In many cases the buyer takes a greater pride in his animals if they are from registered stock and he will often keep the gilts for brood sows instead of fattening them.

When the feeding can be done on uncleared land the pigs will tear up much of the ground and destroy the weeds. When they get older they will tear up the wild shrubs and loosen the smaller stumps. Even the rotted logs will be broken up in an effort to get fern roots and other morsels. It is impossible for bad weeds to get a start when hogs are running in the lot and they will fertilize the land at the same time.

"It is not essential to have an expensive house for hogs in this climate. I have had good results with 'A' houses eight feet square and have them open on the opposite side from the winds. Rails along the sides are a saving at farrowing time to keep the sow from crushing the pigs. I find that it pays to be with the sow when she farrows, even if one has to sit up half of the night. I have saved many good pigs by being on hand.

"I believe in keeping a sow in good flesh when she is carrying pigs. A sow should gain weight from the time she is bred until farrowing time. Give her plenty of exercise at this period. Put her in a new lot and let her root. It always pays to feed a balanced ration so that the sow is supplied with all the minerals she needs. There are many mixed rations that are excellent and it is better to use them as they come than to feed merely mill run or any other grain that is easy to get. During cold weather I like to mix about 30 pounds of alfalfa meal with each 100 pounds of grain, soaking the meal in water over night to soften it."

Mr. Bradshaw has two brood sows and a boar, the latter coming from the Kissick herd near Tacoma. The animal traces back to Orion Top Colonel on the sire's side. He has a well arched back and is strong on the feet, being a typical Duroc Jersey. The oldest brood sow is Middledale Golden Lass, a 4-year-old sow from the Middledale farms at Cresswell, Ore. The younger animal is one of her pigs and is now a 3-year-old.

Both of the brood sows had fall litters this year, one having 14 and the other 9 pigs. A few of the sow pigs have been sold and the rest will be fattened for the market if not sold before that time. As a general rule there is a ready sale for the gilts for breeders and most of the spring pigs are sold for this purpose or for fattening.

"We always get a premium above the general market price because the meat is a good quality," continued Mr. Bradshaw. "We give the animals a good fattening ration and in the winter they get alfalfa meal to replace what green feed they get in the summer.

"One of the last hogs we butchered was fed at a cost of $8, which did not include labor. The value of the pig at weaning time was about $8, making a total cost of $16. When we butchered and dressed the carcass it weighed 210 pounds, or better than $30, which gave us a good profit above feed costs. This is proof that it pays to fatten hogs on the small farm, even if one does have to buy all feeds.

"It does not pay to feed a hog after it has reached the age of 6 months," continued Mr. Bradshaw. "It is no trouble to get them to weigh between 150 and 200 pounds at this age and that is the best size for the butchers. Last year we had eight hogs that averaged 159 pounds at 5 months of age. We cleared over $175 on the lot."

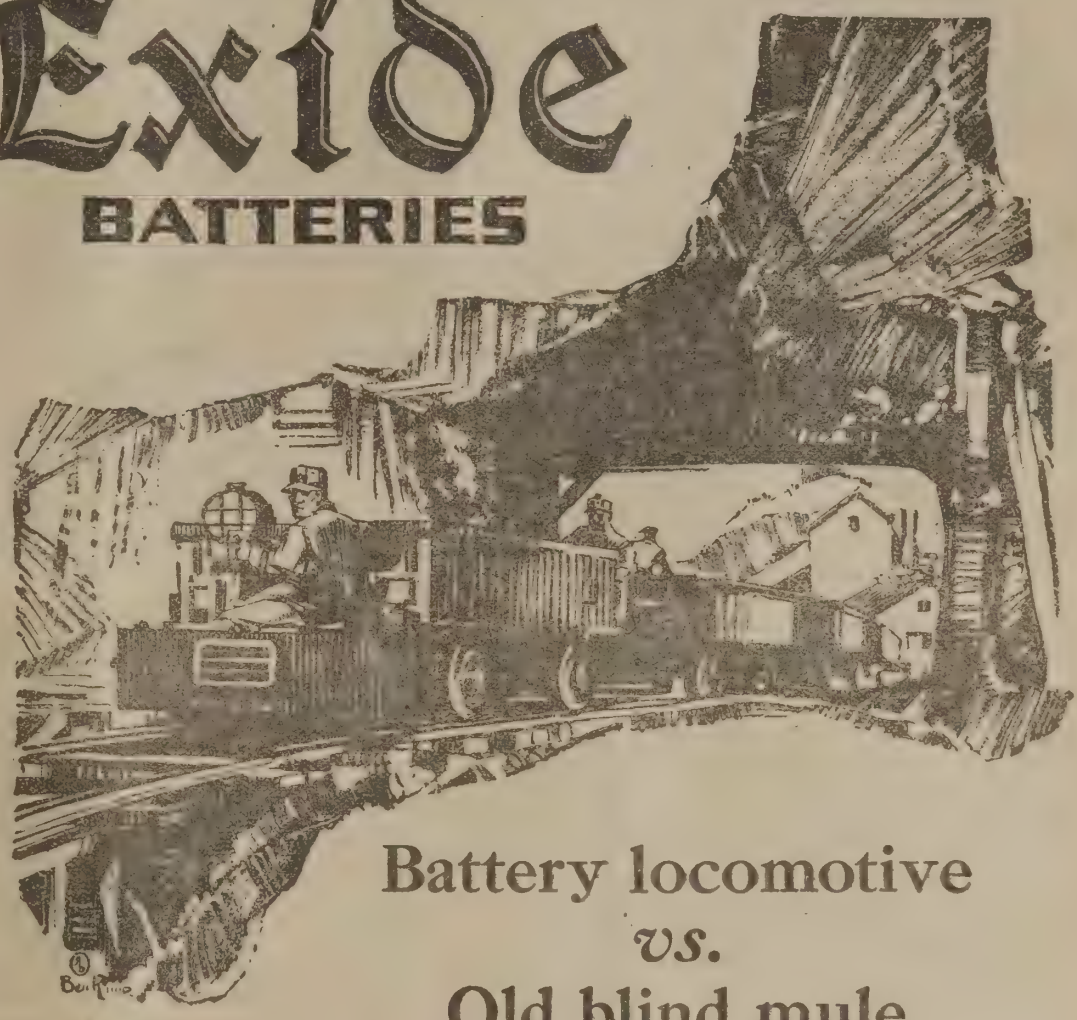
The two boys, George and Rowland, do all the feeding and other work that is necessary in the daily routine, while Mr. Bradshaw works at Sumner during the day. There is no need of his being at home except at nights because the boys are well versed in the art of hog raising and can even look after the sow at farrowing time. And in such cases Mr. Bradshaw makes a practice of sitting up with the sow during the night, while the boys assume the responsibility after breakfast.

FILE IT PROPERLY.

Use a coarse file to sharpen a very dull edge, but finish with a fine one.

A Record Crop

Peas, 20,234 Pounds to the Acre



Speaking of world records for the state of Washington, we now have another in the form of garden pea production in Kitsap county. H. B. Creel of Seabeck had a row 216 feet long planted to two varieties of peas. They grew to a height of 10 feet and produced 302 pounds of peas, which was at the rate of 20,234 pounds to the acre, or over 10 tons.

Mr. Creel wrote to the western Washington experiment station to learn if there was any record in the country that was greater than this and found that the nearest to it was made by a New York farmer, who produced 18,000 pounds to the acre. Mr. Creel's record beats this by over a ton. The varieties were the Teddy Roosevelt and the Quite Content, both being a variety of the telephone pea.

The crop was planted in rows three feet apart and cultivated frequently during the summer. In order to support the vines it was necessary to use six-foot wire netting, but some of the vines could have used more wire if it had been higher and Mr. Creel expects to use 12-foot wire next year.

The soil was a sandy loam with a clay subsoil and on a hillside. The entire patch where the peas were planted was under irrigation from a number of sidehill springs that are on the farm. Mr. Creel has 40 acres in all and raises a large variety of vegetables and fruits and believes in having all products of as high quality as it is possible to maintain.

Exide BATTERIES

Battery locomotive
vs.
Old blind mule

The old blind mule that hauls coal cars in a mine is being replaced by the mine locomotive. More coal we must have; and mine locomotives, propelled by Exide Batteries, have proved that they can handle more coal, save labor, and cut operating costs.

Industries of all kinds rely on the ready power of Exide Batteries. Exides provide current for the telephone system, for lighting railroad trains, ringing fire alarms, propelling trucks, and operating switches.

Most of the farm light and power plants have Exide Batteries. If yours is an Exide you already know its rugged strength and constant service.

Perhaps you are best acquainted with the Exide Battery made for starting and lighting automobiles. Exide was the original automobile battery. There is built into the Exide, made for your car, the experience of the oldest and largest manufacturers in the world of storage batteries for every purpose.

Exide is the long-life battery for automobiles and as such you will find it the most economical. It is the battery of dependable power and as such gives you the maximum comfort in motoring.

Exide BATTERIES SERVICE STATION

The nearest Exide Service Station has a battery the right size for your car. If your present battery needs repairs, no matter what make it is, it will be repaired skilfully and reasonably. If not in your telephone book, please write us for address.

LIVESTOCK AND DAIRY

Keep Pigs Growing

In an exhibit entitled "Pork production," shown by the United States department of agriculture at the International Live Stock exposition, Chicago, the department gave the essential points for raising swine economically.

Good breeding stock, proper mating and careful feeding of the brood sows are all important, but a point in hog raising that should receive more attention, because it is often neglected, is the necessity of keeping the young pigs growing continuously from the moment of birth to maturity.

Even before the pigs are weaned they should have access to grain in self-feeders as a supplement to the sow's milk. As soon as they are weaned the pigs should be kept on full feed, either by self-feeder or by hand. Proper feeds and exercise furnished to vigorous pigs of proper type result in hogs of market weight at about 8 months of age.

"The profitable pig is the one that never stops growing from farrowing to market" is a good slogan for every hog raiser.

Apples and Pumpkin Seeds

By A. B. NYSTROM.

Is it true that apples are harmful to milch cows? I have been told that it will shorten the milk flow. Also, do seeds in squash or pumpkins do the same?

J. E. H.

Apples contain a little over 16 pounds of digestible dry matter in 100 pounds. Nearly all of this is carbohydrates, and the nutritive ratio is 1 to 40. From these figures it can be seen that if apples constitute a large part of the ration the cow is pretty sure to dry up because she is not getting sufficient total nutrients and not nearly enough protein.

However, if the usual feed of clover or alfalfa hay is provided and also a grain ration containing considerable protein, there would be distinct advantage in adding apples to the ration, even as much as 50 pounds per day. The succulent properties of the apples will keep the cow in better condition and also increase the milk flow.

As regards the feeding of pumpkin seeds I can answer you best by quoting from Henry and Morrison's "Feeds and Feeding,". "The tradition among farmers that pumpkin seeds increase the kidney excretion tend to dry up cows and hence should be removed before feeding, has no good foundation. The seeds contain much nutriment and should not be wasted."

Dairy Instructors Elect

W. M. Regan of the dairy department of the University of California was elected president of the Western Dairy Instructors' association at its annual meeting in Portland during the week of the Pacific International. H. W. Atkinson of the University of Idaho was made vice president and E. V. Ellington of Washington State college secretary-treasurer. The association is sponsor of the dairy and dairy products judging contests each year at the stock show.

Matters of common interest to dairy instructors in the west were discussed at the conference, which was favored with talks by J. B. Fitch, head of the dairy department at Kansas State Agricultural college, and by O. M. Hundiker, formerly head of the dairy department at Purdue now with a creamery company in Tacoma.

Difficult Churning

By A. B. NYSTROM.

Will you please tell me what to do for a cow when it takes three hours to churn her cream? When fresh last June I could churn in 20 minutes. This is her second calf.

R. E. D.

The causes of difficult churning are as follows: Advanced lactation, improper ration, sweet and thin cream, low churning temperature, insufficient agitation.

In the first place it must be understood that in the churning process the butter "comes" because the fat globules stick together during the agitation of the cream until the fat particles are large enough to permit the draining of the buttermilk. Obviously any condition that will lessen the adhesive properties of the individual fat globules or prevent them from striking each other during churning will have the effect of causing difficult churning.

As a general rule the cream from cows far advanced in their lactation periods does not churn as easily as that from fresh cows. The reason being that fresh cows produce large, soft fat globules and cows nearly dry produce small, rather hard, fat globules.

Cows fed on dry feeds not properly balanced will produce a hard fat; a combination of feeds such as grass hay, ground barley and mill run will be sure to produce hard fat globules that will not churn easily under ordinary conditions. On the other hand a ration of clover hay, ground oats, mill run, linseed oil meal and corn silage will produce a soft fat almost regardless of the stage of lactation.

Sour cream churns easier than sweet cream. When sour the cream is less viscous and splashes more easily than when sweet; hence the fat globules strike each other more often and churning is easier with the sour cream. The same difference is noted between creams of high and low fat content. Cream from 25 to 35 per cent fat churns much easier than that which tests below 25 per cent.

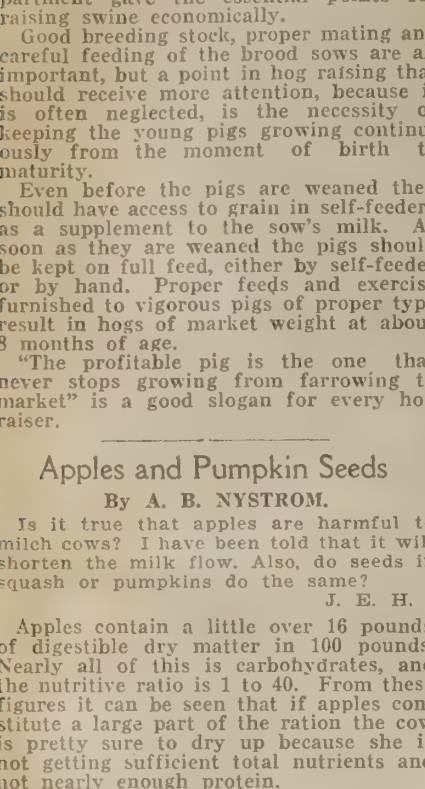
An accurate thermometer is a necessity in churning. Cream should be churned at a temperature that will cause the butter to come in about 40 minutes. The exact temperature required will cause slow churning and hard butter while high temperatures cause quick churning and soft butter. During the winter months a temperature around 62 degrees F. is about right for normal cream. In the case of abnormal cream the adjusting of the churning temperature will usually solve the problem of difficult churning.

Briefly stated the points to observe to solve the problem of difficult churning are as follows:

1. Cream from cows recently fresh usually churns without difficulty.
2. Feed the cream by holding at 70 degrees F. for about 10 hours and then cool to 60 about 4 hours before churning.
4. Don't fill the churn over one-third full and make sure there is complete agitation during churning.
5. The churning temperature must be raised or lowered until the butter comes in 40 minutes.

Japan Looks to More Cattle

If Japan takes to cattle raising there should be an opening for the breeders of the Pacific northwest.



A correspondent of the Associated Press, writing from Tokyo, November 4, says:

Having more than 7,000,000 acres of arable land, a temperature compared with that of the American northwest and everything nature could supply for a cattle raising country, the Hokkaido, Japan's northern island, last year had 180,000 head of horses, 32,000 head of oxen, 136,000 hogs, 1800 sheep and 556,000 fowls. While a good profit heretofore has been made from horse raising, authorities believe cattle raising, now that the Japan are eating more meat, would be even more profitable.

It is proposed to bring 3,500,000 acres of this land under cultivation and turn approximately 2,200,000 acres into pasturage. It is estimated that on this there could be raised 540,000 head of cattle, 300,000 horses, 3,000,000 sheep and 300,000 hogs.

DRAIN THE HOG PEN.

Build the hog pen on a little elevation so that water can not stand in it. It is hard enough at best to keep a pen fit for a hog.

Just how *does* Kow Kare increase the milk yield?

Maybe you have been a regular user of Kow-Kare in treating cow diseases, but you may have never fully realized that this famous cow medicine is being used regularly in thousands of dairies to increase the winter milk yield.

Both uses are equally logical. Cow Diseases — nearly all of them — arise from a lowered vitality of the genital and digestive organs. Kow-Kare removes the cause by reaching these very organs and restoring vigor. The milk yield is controlled by the same set of organs. Dry winter feeds put a greater strain on their functions and produce a lowered vitality and yield.

Kow-Kare, fed moderately and regularly, gives to the milk-making organs the added strength they need to offset winter feeding conditions. A greater milk yield cannot fail to result.

The expense of this Kow-Kare treatment is decidedly small. Most dairymen give a tablespoonful morning and evening in the feed, one week out of each month. The increased milk-profit pays for this a hundred-fold.

No cow medicine can equal Kow Kare for the treatment of actual disease. For twenty-five years it has been the standard remedy for *Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.*

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Guide to Feeding

Balanced Ration Not Definitely Recommended for Whole Herd

By A. B. NYSTROM.

Please make up a ration from the following feeds: Mill run at $32 per ton, corn meal at $42, coconut meal at $38, dried brewers' grains at $28, ground oats at $48 and ground barley at $46. For roughage I have choice clover and timothy hay or alfalfa, first cutting. I have mangels for succulence. Also mention how much salt to feed to the average cow daily. My cows are all Holsteins and give on an average three gallons of milk daily. I would also like to know what kind of mineral to feed and how much to each cow. The cows are in a run-down condition. T. T.
Kent, Wash.

With the exception of the timothy hay, mangels and the corn meal, these feeds are all rich in protein and unless you are careful you are apt to get a ration that is too narrow, having too much protein. However, since a balanced ration should never be considered as a definite recommendation for the whole herd, but rather as a guide to feeding, it becomes an easy matter to get a good basal ration for the herd using the feeds you have mentioned.

If you feed to each cow daily:

15 lbs. alfalfa hay	@20. ton	15.0c
50 lbs. mangels	@ 6. ton	15.0c
1 lb. dried brewers' grains	@28. ton	1.4c
1 lb. mill run	@32. ton	1.6c
4 lbs. corn meal	@42. ton	2.1c

you would have a ration with a nutritive ratio of 1 to 5.1 and at a cost of 35 cents per day. This will do as a starter. Now by watching the individual cows you will seet that some will consume 50 pounds of mangels, but will eat more than 15 pounds of hay. These must have some more corn meal or ground barley. Others will not eat all the hay you give them, but will call for more mangels. These need not have a change in the grain ration, since the basal ration is rather narrow to start with, but they should have all the mangels they will clean up. If the mangels cost more than the price indicated, or if there is not enough on hand to feed as heavily as suggested and last through the winter or until other succulence is available, it will be well to decrease the allowance to 40 pounds per day. But in so doing it will be necessary to add another pound of corn meal to the ration.

If clover and timothy hay is used in place of the alfalfa the grain ration should be changed to:

Three pounds dried brewers' grains,
Two pounds mill run,
One pound corn meal.

In all cases the individual cows should be watched closely. The highest milk producers will need more high protein feeds, and the low milk producers less of the protein feeds. If it is noticed that certain cows are losing in flesh it will be necessary to add more corn meal. As soon as the barley falls to $4 per ton less than corn meal, then ground barley should be used in preference to corn. Otherwise use the corn meal.

Cows should have about three-fourths to one ounce of salt daily. One-half of this may well be mixed with the feed, but it is not wise to mix with the feed all the salt the cow requires, as it is easy to overfeed on salt. A box of salt in the yard where the cows can have access to it is the bet way to supply a part of the salt requirement.

Any ration containing alfalfa hay, which is high in lime, and mill run, which is high in phosphorous, is not likely to be deficient in mineral matter. It is more likely that your cows have not been fed enough of the common feeds—or they may have been getting too much protein as compared with the carbohydrates and that is the reason they are "run down."

If a deficiency in the mineral content of the ration is known to exist, some dairymen have obtained good results by feeding quantities of ground bone or bone ash, to furnish phosphorus, and ground lime stone and wood ashes to furnish lime. These should be placed in a separate box and not mixed with the feed.

Hogs on Barley Stubble

Fifteen acres of corn have been hogged off on the Lewis & Huxtable farm near Union Gap, Yakima county. There were 200 spring pigs kept on this farm during the summer for the purpose of harvesting the corn crop. The pigs had access to alfalfa pasture during the summer, but also had the range of barley stubble, which they cleaned up thoroughly.

Mr. Lewis reports that the hogs do a very clean job. After the hogs have eaten all the grain, cattle and sheep will be turned into the field to consume the large part of the stover, which the hogs did not eat.

In addition to the spring pigs just fattened, the partners have over 300 fall pigs, which were farrowed during August. They will be carried over winter on late alfalfa pasture, and a supplement of corn and other grain.

LOOKING BACKWARD.

Don't you wish you had repaired that roof before the rainy season began?

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack,

Include

DR. HESS STOCK TONIC
in the ration

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.

POULTRY AND RABBITS

Must Feed Hens Well

You can not work a hen to death, but you can starve her. And many a farm hen is sworn at and branded as a no-good when the caretaker is all to blame for underfeeding her.

Everywhere the gospel of "make-'em-scratch-for-it" is being preached, and rightly so. But "it" must be there to scratch for and find or you will find yourself scratching in the nest for eggs and finding none. This scratch-for-it idea may be carried too far, though it is as sound doctrine as the golden rule.

The farm hen that gets off the roost at the first peep of day and begins to scratch for food is usually listed as a good men to have. Likewise, she that scratches until black night drives her unwillingly to bed is booked as a high producer. But how many hens get up early and stay up late because they can not find enough food to satisfy the demands of their bodies? Thousands of them.

Underfeeding is as bad as overfeeding. The undernourished hen is as sure to produce few eggs as is the overfed and fat one. On the specialized poultry farm there is perhaps little danger of letting the hens go hungry, for such farms are conducted along lines of scientific feeding. The poultryman knows how much and what kinds of feeds to give. But on the farm where the poultry flock is a side issue and poultry care is not made a matter of conscientious study there is danger of poor feeding—too much or too little or just enough improperly balanced.

The farm flock should be handled by the caretaker. Feel of the hens. You can tell whether they are in good physical condition or not. You can tell if they are thin-fleshed; you can tell if they are fat. Look at their combs; look at their eyes. Watch them as they go about their daily rustling. Listen to their singing if they sing or to their complaining if they complain. You can tell, and, having told, you can remedy the condition if something is wrong. If you find scantily filled crops when you feel of the birds on the roost at night you may safely make yourself a bet that they are undernourished. The crop should be well filled with good, solid food at night. It should be empty in the morning.

Do not make the mistake of giving the hens all the feed they can gobble down when they come from their perches in the morning. Give them just enough to break their hunger without destroying their ambition to get a little more. Keep them active all day looking for feed, but not starving if they do not find it in ample quantities. Work out the feeding schedule so that their cravings will be satisfied, but not satiated when night sends them to the roosts.

Under these conditions the late to bed and the early to rise hen is the one that produces eggs, for her activity indicates the vigor that is essential to success in any line.

Get Ready for Spring

These winter evenings are a good time to do a little figuring. Next spring when we want hatching eggs, an incubator to hatch them in and a warm place for the baby chicks to start their feathers in is a bad time.

If one wants a high percentage of hatch from one's eggs, it is necessary that the cock or cockerel be placed with the hens some little time before the eggs are selected. Therefore, now is the time to make sure that the right male bird will be available for mating along in February or early March.

If one plans to use the hens rather than the incubator, now is none too early to plan the hatching quarters and get the hatching nests ready. There is more time to do it properly now than there will be the day you desire to set the hen.

If you want to use an incubator you should not delay another week in making a study of the kinds and their methods of operation. Order it in plenty of time and become as familiar as possible with its construction and the rules for its successful use.

Possibly you want to make your own brooder. You can do it with reasonable success if you have a little mechanical and carpentry skill. If so, get it ready while there is time to spend on the details of it. If you would rather buy one, why wait until the eggs are set or until some of them are pipped?

Some parts of the country are covered with two feet of snow and the thermometer says zero or lower. Looks like baby chick time never would come. But it will, and the successful poultryman, even though he or she be in charge of a farm flock of only 50, is the one who gets properly ready weeks ahead. He who waits until the last week goes without adequate equipment and the penalty is semi-success or failure.

When the Frost Goes, Look Out

Winter's freeze may nip a few combs and otherwise injure the poultry flock, but it lends a hand in helping the farm poultryman keep his roosting quarters sanitary—that is, a little sanitary. Frozen droppings under the roosts are not unpardonable, but when the frost goes, look out! If one has been careless during the cold weather and allowed the droppings to accumulate on the board he must watch for the first thaw-up and get busy. A tremendously filthy and unsanitary condition will develop within a day after the temperature rises. The house will become soggy and ill-smelling. The hens will get their feet polluted and will in turn mark the eggs with their feet and render them nearly unsaleable.

Of course, it is always the best plan to clean the droppings board every day. It is little more trouble and the results more than pay for the extra effort. A little chaff or fine straw sprinkled on the boards immediately after cleaning will help greatly the next morning and result in a better job of cleaning. This material may be taken from the litter on the scratching floor, and it improves rather than injures the fertilizing quality of the droppings by adding its measure of humus to the soil onto which it goes.

AVOID RABBIT DISEASES.

Rabbit diseases, like those of poultry, are due in a large measure to careless provision for them and insanitary condition in their housing. Just as the hens in the laying flock give best results in clean, bright, dry, sanitary quarters, so will the rabbits and hares thrive in this kind of housing.

GROW CARROTS FOR RABBITS.

Rabbits, as a rule, are fond of carrots, and this root is a valuable feed for them.

Be Your Own Weather Man

THIS remarkable weather prophet tells exactly what the weather will be 8 to 24 hours in advance. Not an experiment or a toy but a scientific instrument of proven accuracy. Works automatically—always in order.

THERE IS AN IRRIGATED FARM for YOU in WESTERN CANADA

Irrigation Insures and Intensifies

The Canadian Pacific Railway offers you in their Irrigation Block an opportunity to achieve independence and grow rich on an irrigated farm in Western Canada. The lands offered are in the largest and most extensive irrigation undertaking on the continent. The climate is not excelled by any agricultural area in America. The lands are in the Sunny Southern Alberta district. Additional irrigation projects are now being constructed with the assistance of the Provincial Government of Alberta.

20 YEARS TO PAY All you have to pay down is ten per cent of the purchase price, balance in nineteen annual installments with interest at six per cent. **BUT, if you purchase under settlement conditions, which require occupation and reasonable improvements, there is no further payment of principal until the end of the fourth year, and besides this the interest for the first two years will be only two per cent per annum, balance of interest at six per cent and principal divided into sixteen equal annual installments.**

Irrigation Is Crop Insurance

There is an unfailing supply of water which is administered under the direction of the Canadian Government. The water is free, the only charge being a fee of $1.25 per acre for the maintenance of the system and the delivery of the water. Irrigation here is NOT expensive. Crops are assured.

$2,000 Loan to Farmers

The Canadian Pacific Railway, confident in the producing ability of these lands, as many times demonstrated, will loan to approved settlers on irrigated farms $2,000 on improvements with no security except the land itself. You can take 20 years to repay this loan at six per cent interest.

Why an IRRIGATED Farm

Because irrigation in Sunny Southern Alberta
—insures crops every year
—increases crops every year
—makes you practically independent of weather conditions
—produces great quantities of coarse grains, pastures, alfalfa, roots, thus developing the livestock industry, which is safe and ultimately more profitable than wheat farming
—tends towards close development, well cultivated farms, good neighbors, good roads, schools, churches, telephones, mail delivery, co-operative marketing and a high standard of community life.

This Is Your Opportunity

The Canadian Pacific Railway knows that its prosperity depends on the prosperity of the settlers along its lines. Because it wants good settlers it is willing to sell these lands at these remarkable prices and terms.

ORCHARD AND GARDEN

Banding Apple Trees

The old custom of banding apple trees for codling moth control has by no means gone out of use. J. Howard Wright, manager of the Wright Fruit company in Yakima county, Wash., had 3000 trees banded the past season and from the number of worms he has been able to catch and kill, he is positive he has greatly helped in the control of the moth the next season. Checking over the results, he finds that 30,000 worms were destroyed in this final handling of the bands for the season. To band the trees and catch the worms Mr. Wright regards as an effective way of lessening the infestation the following season. As Mr. Wright explains the habits of the worms, the majority of them leave the apple before it drops to the ground and they crawl down the tree to hide under the band. The worm preferably secrets itself on wood and the trunks of the trees are the customary places for it to prepare itself for the winter. Wherever any bark has separated from the trunk, as where there has been frost injury in recent years, the worm is quite likely to be found, and such places often harbor a lot of them.

Mr. Wright had his bands especially made and a four-penny finishing nail is used to fasten them to the trees. Before putting the bands on, however, the trunks of the trees are scraped bare of loose bark, so as not to afford a harboring place for the worms, hence they are likely to seek shelter under the band.

Avoid Too-Close Planting

"There is a growing demand for sour cherries, both for canning and for fancy trade," said E. D. Hunter, county horticultural inspector of Skagit county. "The trees require good soil and drainage, the best results being obtained from sandy loams which have a slight slope.

"In planting an orchard it is better to use 2-year-old trees. The hole should be large enough to accommodate all roots without crowding and if there is a hardpan it should be broken up by blasting. It is much better, however, to avoid any soils where the subsoil is heavy or impregnable.

"Many new orchards are planted too close. It is far better to have the trees too far apart than too close. They should never be set less than 25 feet each way.

"The young trees should be headed low, and it is best to cut out middle limbs to give the tree an open center. Pruning should be studied carefully. Cut out all branches that are apt to create a weak crotch and permit the tree to break when heavy with fruit. The heading should be continued for the first four or five years in order to produce a strong trunk, after that thinning only should be done to take out limbs that rub or those that have been broken. The trees should begin to bear at the age of 4 years.

As for varieties, I would recommend the Mountmorenci if the large type tree can be secured. The Early Richmond is also a good cherry and, like the Mountmorenci, it has a light red fruit. The English Morella is a darker cherry and sometimes is almost black. It is not grown as extensively, however, as either of the other varieties mentioned.

"While sour cherries are self-fertile, they have been found to pollinize the sweet cherries when the two types are planted in the same proximity. For this reason some growers are planting the two varieties in the same orchard and are obtaining excellent results."

Grapes Bring Good Returns

R. S. Huff of Sumner has a small patch of grapes on some sidehill land which bring him a good return each year. There are a number of varieties, but the best paying grapes are the Island Belle and Niagara. There is a good market for both of these varieties and they produce a fair crop every year.

Mr. Huff believes that a small patch of grapes pays better than the same amount of land planted to an orchard. They can be raised on hilly land where other crops would be hard to handle, and they will do well without much fertilizer. In order to get best returns from the cuttings the vines are pruned late in the winter and the cuttings set out in the spots where it is desired to have them grow. A number of cuttings are placed in each hill, and the best one saved to produce the vine. This plan allows for loss and also gets away from the necessity of transplanting which causes a setback and necessitates extra labor.

CODLING MOTH LOSS, $756,000.

Ravages of the codling moth cost Yakima growers $756,000 this season, estimates W. L. Close, district horticultural inspector, who figures the loss at 1000 carloads of apples worth $1 per box f. o. b. With the estimate he furnishes a program for preventing a repetition of the loss next season. It includes removal and destruction of all culls, burning of scrapings from rough bark and crotches, digging up the ground for a distance of three or four feet from the base of the tree, and pruning with a view to effective spraying.

Orchard Needs Bees

"Sour cherries pay so much better than apples or pears that we are taking out what apples we have left and will replant the field with Montmorenci cherries," remarked S. J. Harmeling of Vashon, King county, when asked his opinion as the best varieties of apples for commercial use. "We already have six acres of our orchard planted to sour cherries and half of that amount is in bearing. The variety does well in this climate, but it is a good plan to set out an occasional tree of Richmonds for pollinizers.

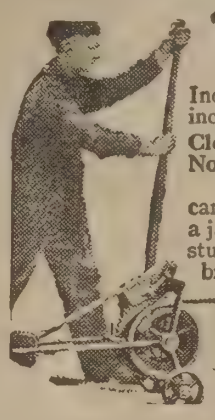
"For best results, one should have an abundance of bees, since you can not expect perfect pollinization without them. If an orchardist can have his own bees he is more certain there will be enough to do the work, but there are some that can depend on their neighbors' colonies with a good degree of success."

Mr. Harmeling told how he preferred the dwarf trees on the side hills because they are easier to pick and the rows can be cultivated much easier. Last year the pickers found it was easier to pick 400 pounds of fruit from the dwarf trees than 200 pounds from the standard trees. The price for picking was 2 cents per pound for the standard orchard and 1 cent with the dwarfs. All of the pickers preferred the latter, since they could earn more per day.

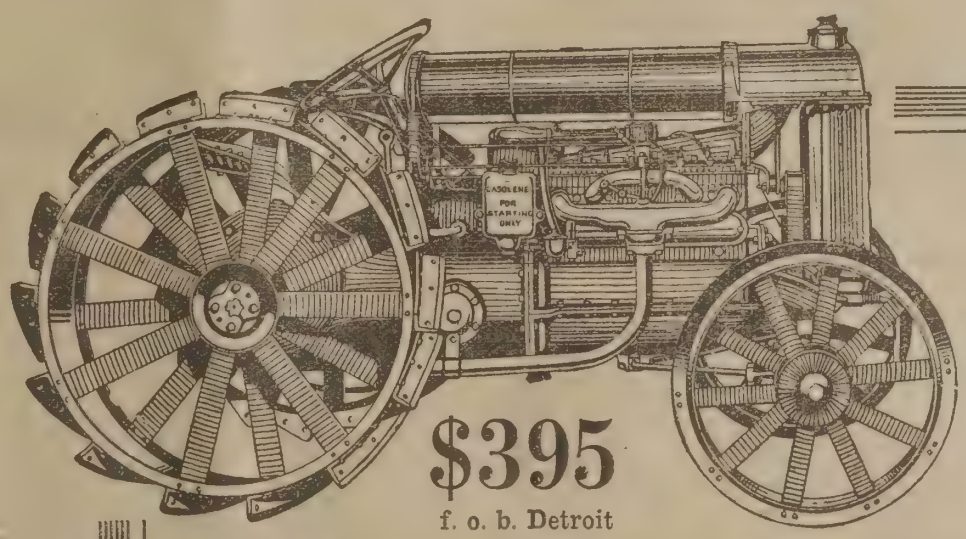
As for the pears, the Comice was mentioned as the best paying variety since it yields best and seems to be the most in demand. The Bosc was also highly recommended for commercial use and is one of the best bearing varieties that can be grown for the local market. There is also a good demand for the fruit.

One of the orchards was planted to pears, both Anjous and Comice while sour cherries were planted between the rows as fillers. When it became evident that the price for the cherries was better than for the pears and the cherries made comparatively better yield it was decided to leave the cherries and take out all of the pears. The cherry trees at the age of 4 years produced an average of 25 pounds each.

"As for fertilier, we have found nothing better than a good crop of vetch," concluded Mr. Harmeling. Barnyard manure is one of the best forms of manure, but it is impossible to get it in amounts sufficient enough to apply to the orchard. Even if we could get it, the cost would be prohibitive. By planting a crop of spring vetch in the fall and let it grow all winter to be turned under in the spring. Such a practice adds much humus to the soil as well as nitrogen for which the plant is noted.



"We prefer the purple vetch for fall seeding with wheat as a hay crop because it makes a rapid growth in the spring and it adds to the quality of the wheat for hay. It is not as good for a cover crop as the spring variety with the yellow blossom.



U. S. APPLE CROP.

The government's estimate of the 1922 apple crop of the United States was 31,901,000 barrels, as against 21,204,000 barrels in 1921. The 1922 crop is given as 68.5 per cent of a full crop, the average for a 10-year period being 57.3 per cent. As to the quality of the crop, that is given as 79.1 per cent, as against a 10-year average of 80.0 per cent.

KINKADE GARDEN TRACTOR
and Power Lawnmower
A Practical, Proven Power Cultivator for Gardeners, Suburbanites, Truckers, Florists, Nurserymen, Fruit Growers.

Nutrition Work

Carried on Among School Children

A novel plan of carrying on nutrition work among the school children of the state is being started by Mary E. Sutherland, nutrition specialist of the state college extension service. When the children are weighed they are given a yellow card, upon which the weight may be recorded each mouth, as well as the figures which indicate what their weight should be if they were normal. In addition each child is given a card to indicate the class in which the child stands. A white card indicates that the bearer is up to average weight; blue card that the holder is less than 7 per cent below average, while a red card indicates that the student is more than 7 per cent under weight and should do everything possible to bring his weight back to normal.

A number of county home demonstration agents in the state are taking up this system. A number of schools in King county have already taken up the work, according to Miss Edna Walker, county home demonstration agent, and many others have expressed their desire to start the plan as soon as arrangements can be made to do so.

More Potatoes in the Diet

There is estimated to be approximately 53,000,000 bushels of surplus potatoes in the United States this year and a campaign is under way to have consumers eat more potatoes in their diet. Dean E. C. Johnson of the state college is one of the eat-more-potatoe advocates. "Careful grading of the crop will help in the marketing preblem," said Dean Johnson,' "as it will not lower the price below what it is already. The unmarketable grades can be fed to stock. When potatoes are boiled and fed to hogs they will replace corn at the rate of about four pounds of potatoes to one pound of corn," he said. "A ration for a 100-pound pig would be two or two and a half pounds of corn or other grain and eight or nine pounds of potatoes a day, properly supplemented by half-pound tankage or its equivalent. Potatoes may be fed to dairy cows if well washed and cut in small plieces. They should be fed not more than 25 pounds a day, after milking, not before. They take the place of root crops or silage, but not grain, so the farmer who is feeding for milk production should feed grain in addition."

Berries, Chickens and Cows

Dan Jacobson of Puyallup has one of the best small berry patches of raspberries in the valley, according to his figures from the season's crop. From three-quarters of an acre of berries there were over 400 crates for the second year of bearing. The varieties were Cuthbert, Antwerp and Marlborough.

The field was fertilized with a combination of henhouse litter and stable manure. The patch was well taken care of and the canes grew to a good size. There is now an excellent growth of new canes for the next year's crop and the prospects for a similar crop next year are good.

There are but four acres on the Jackson farm and it has 1000 White Leghorn hens and two cows. Kale and mangels are grown to supply green feed for the chickens and cows and there is more than enough manure for the crops on the farm.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising, 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review building, Spokane, Wash.

POULTRY (Continued) 174

$2000 FOR FIVE HENS—A RECORD PRICE for record hens. We announce the purchase of F. E. Gilbert's winning pen of White Leghorns at the recent Puyallup egg laying contest. These five birds laid 1421 eggs in 12 months, thus establishing a new world's record. These birds are to be mated with the best cockerel to be obtained and used in building up Queen Quality strain of chicks. We have also contracted with Mr. Gilbert for the eggs from the pen sisters of these wonderful birds. We will have a limited number of chicks and eggs from them for sale this season. The greater part of them will be used for our own use. In addition to the Gilbert birds, we will have many flocks direct from Hollywood and Tancred stock. We also hatch R. I. Red and Barred Rock chicks of exceptional quality. We are now booking orders for early delivery and have sufficient capacity to assure prompt delivery at time promised. Incubators, 15 per cent off. We offer a special discount of 15 per cent on Queen incubators purchased from us during November and December. In addition to the Queen, we carry the Master's incubator, Petaluma electric incubator, Blue Flame brooders, American brooder stove and are agents for the Kresky brooder stove. Write for our new catalog. Queen Hatchery, 87 Sewart st. Seattle Wash. Ell. 2054.

"HENACRES" BABY CHICKS FOR 1923. IT is time to plan your poultry work for next spring and we suggest that you write for our free illustrated catalog now. The booklet contains lots of information on poultry management, gives our feeding formulas, etc., besides describing our stock. "Henacres" Leghorns have made good all over the northwest, so you take no chances in buying them. Some one in your neighborhood knows us, ask him. We have already sold 40,000 chicks for 1923. "Henacres," Box A, Prosser, Wash.

BABY CHICKS—OREGON'S BEST AT REAsonable prices. Leghorns, Reds, Anconas, Minorcas, Barred Rocks, White Rocks. We pride ourselves on a long list of satisfied customers. Postal secures free catalog. C. N. Needham, Salem, Ore.

CHAPTER TWENTY-SEVEN.

Over the Ice Caps at Dawn.

"Exactly the way I feel about it, old cow!" exclaimed Holloway. "Here we are in midwinter! But only a few miles from us there's grass a plenty and warm weather to spare. But we can't get to it. No, we can't get to it just yet. It's something for men to worry about and for cows to bawl about. But I'm hungry again. Can anybody rustle up anything at all to eat."

"I've got some scraps of dried buffalo meat. Enough to give each man a few bites," Cooper replied.

"And I've a bottle of milk," said Orlando.

"Then let's have a cold snack," urged Givens. "We'll never need it worse, I hope."

The meat was soon distributed, and Orlando poured some milk into each man's cup. When those were disposed of all declared that they felt better.

"Pity we haven't something for Brindle. This has been a hard fight on pack cows as well as on pack men," Sanders remarked.

"More than a gallon of shelled corn in one of her rawhide pockets, you recollect," Orlando told them. "I mean the corn we brought along to parch in case we ran out of breadstuff."

"Give her at least half of it," ordered Cooper. "She didn't have any supper, you know."

After getting out the little bag of grain the cow's owner, groping about, kicked and brushed the loose snow away till he found hard ice, on which he poured the corn. Brindle could be heard licking it up and munching it greedily.

Another silence followed, broken at length by Esau's muffled voice, coming from under his blanket: "What time do you reckon it is?"

"My guess would be 2 o'clock," replied Sanders.

"If that's right we've got more than three hours to shiver here yet before daylight comes to our rescue," growled Givens. "From the way I'm feeling I'll be froze as stiff as a poker before that time."

"Maybe we'll not have to wait so long, Jeff," suggested Sanders. "This cloud may drift away from over heads soon and give us a glimpse of some stars to steer by."

"Bet a dollar I'll be past moving long, long before this snowstorm slides on! If feeling counts for anything, my feet are already a part of this ice cap."

"So's mine," declared Esau. "Don't see how I can stand this settin' still much longer. Guess, though, I'll try to grin and bear it for a spell."

"With me it's either bounce up and traipse on or sit still and freeze to death!" declared Givens, in emphatic tones.

"I'm feeling about the same way, Jeff," Holloway assured him. "I don't care to freeze to death any time, and especially not in September. People wouldn't believe it."

"But if we only wander about and never get anywhere, seems to me we'd better sit still and tough it out as long as we can," urged Sanders, who, from the first, had had his feet on part of his blanket.

"For my part, I've just got to do something right away!" Cooper's voice exclaimed. And the noise his boots made meant that he had sprung to his feet. "I'm bound to do some tramping, no matter in what direction, or my feet will break when I go to walk on 'em. Even if we don't do anything but straggle about we may stray out from under this cloud. After that we'll see a star or two and know which way's which."

"But in this awful darkness we're likely to lose some of us," objected Sanders.

"Is more or less danger of that," Cooper admitted. "We need something to guide us through this pitchy black. Wonder what we can use. If any of you feel able to sing, strike up a lively tune. Then everybody keep within earshot of the singing."

"For my part, I need all the breath I've got to travel with," declared Givens. "This rarified air ain't any too easy for me to breathe, anyhow."

"I know something that will beat singing out of sight," Orlando assured them. And he at once began to grope for Brindle's pack. When he had taken out the cowbell and made it ring, all agreed that that would be the best thing they could find to keep them together.

"Let's hope it won't guide the redskins to us," Givens said.

And Cooper answered: "It's not halfway sure that the Utes have followed us up onto this snow cap. And if they have they're probably at least a few miles north of here. Even if they happened to be closer, the noise of the bell won't carry far in this storm, I imagine."

"Frisk will give us warnin' in good time if any redskin comes sneakin' around," Esau assured his invisible fellow travelers. "Even if they got nigh, they'd have hard work shootin' us in the dark. Fact is, I don't see how they'd set about doin' anything much to us."

"I'm afraid they could do a lot to us if they found us—the cunning rascals!" Cooper said. "But we'll hope they're not near enough to hear the bell. Anyhow, we'll have to take the risk."

"I don't see any other way," Sanders told them.

When the bell collar had been buckled around Brindle's neck and Orlando had rolled up her blanket and stowed it away he put on her pack. Then they all took up their own packs and buckled on, and the little procession started.

"Jess, guess we'll let you lead the way again. You've proved yourself a pretty good pathfinder so far tonight," Cooper's voice said that.

Holloway laughed. "Maybe so while I could see a few winks. But we're all blind as bats, and one leader is as safe as another. Usually I have a pretty good sense of direction. But we've been tramping a considerable while since we could see, and I don't claim to know anything. I'm going to start out on what seems to me a due-east course. But it's just as apt to be due west, or north, or south."

Now Sanders said: "All we ask of you, Jess, is that you strike out on some one course and stick to that. Even if that course is due west, it will lead us out from under this cloud sooner or later. And when we get out we'll try to stay out. But if you go to leading us in circles, we're apt to wander in these clouds and thick darkness till daylight comes."

"Easy enough to tell me to follow a straight line, Abe. But the experience of all people who have been lost in the dark proves that it's well nigh impossible to do that. There's something that pulls a man in a circle, no matter how hard he tries to go straight."

"Seems to me we could manage to strike a light long enough to catch a glimpse of a compass," Orlando suggested.

And Holloway said: "It would be a little hard to make a blaze, now that we've used up all of our matches. Even if we got one glimpse at a compass, that wouldn't do much good. We'd have to strike a light every few minutes. So here goes to do the best we can in the dark!"

On they straggled now, the whole invisible party. So intense was the blackness that, as far as the present was concerned, they could all just as well have been stone-blind. Both Jess and Orlando had hold of Brindle's rope, Jess in the lead and Orlando farther back. The others came on behind, guided through the black snowstorm by the ringing of the cow's bell.

Now they all moved on without speaking. Once, a short time later, a slight change occurred. Something, probably a strong gust of wind, broke open the cloud overhead, and let a little starlight down. While the light lasted the lost wanderers could catch dim views of one another.

But soon that cloud crack shut together and the blackness swallowed them up again.

Hour after hour—or so at least it seemed to them—the little party of lost gold seekers trudged through the snowstorm and that pitchy darkness. In what direction or directions they were moving they did not know. Owing to the roughness of the snow field they had to advance slowly, cautiously, in the dark, like so many blind people. Either this snowstorm was a very extensive one, or they were moving in circles. Doubtless they were circling. While they would have been delighted to escape from under the cloud once more, the main purpose of their tramping just now was to warm themselves—to keep from freezing.

Now and then they paused for a little while, to rest and breathe. The rarified air of the mountain top made that necessary. But they did not sit down; and each halt was for only two or three minutes. Soon they would be moving on again, guided by Brindle's bell through the blackest snowstorm they had ever been in.

At last, when it seemed that all the wanderers must either sit down to rest and freeze, or drop down from weariness, Given made a discovery: "Fellows, either my poor eyes are playing pranks with me, or yonder's a light spot! Can any of you see it?"

The light was so very faint as to be scarcely discernable, but it was no illusion, and they were all soon gazing toward it. The spot was to the right of their present course and Jess, turning, led them all in that direction.

"We'll mighty quick find out what's there—whether a lantern or a lightning bug!" he called back, gaily. Jess was about the only member of the party still able to joke.

After dragging their tired feet for a few minutes toward the light the travelers found themselves emerging from the storm and passing out from under the cloud. The visible spot they had discovered proved to be the moon, which, little more than a crescent, was just rising. Now they shook the snow off their blankets and took heart.

"At last! Thank the good Lord!" exclaimed Givens, fervently, when the stragglers were under a clear sky and twinkling stars once more. Now they could plainly see that wall of blackness behind them. "We didn't break out of that big splotch of midnight a minute too soon for me! I'm just about petered out—ready to flop down in my tracks. Another mile or two, and you boys would have had to tote me or leave me."

"Spunk up! Spunk up there, Jeff! Don't go to flopping like—like a dishrag!" called back Holloway.

And Sanders added: "Yes, we've got enough to tote our own heavy feet, without toting any longlegs like you!"

"We must push ahead till we're off of this snow cap and a few miles down the mountain," Cooper told his fellow-stragglers. "No wood to make a fire up here, and nothing but a floor of ice to sit on and rest on. And besides——"

"Yes, and no grass for faithful old Brindle, that's been with us in all our wanderings, and——" Sanders was saying.

"And done as much hard travelin' and steep climbin' as any of us tonight," added Esau.

"And toted a ten times bigger pack," Givens mentioned.

"To say nothing of her milk that we've drunk tonight." Cooper was speaking. "Without that to brace us up I'm of the opinion some of us would have collapsed before we straggled out of that black snowstorm. Yes, we've certainly got to look out for Lando's old Brindle.

Now, quickening their gait a little, the weary-footed wanderers trudged on, painfully, straight toward the rising moon. There was half a mile more of ice and snow, and day was breaking when the straggling procession passed from the ice cap to bare earth and rock. Scarcely had they left the snow wastes behind them when the air began to grow warmer.

And it grew still warmer when the sun came up brilliantly. Though more than one of the party declared they would have to stop and rest, they kept dragging themselves along. So nearly exhausted were they that most of them had forgotten the Indians they were fleeing from. But Orlando, on seeing a clump of weeds, pulled a handful and stuffed it into Brindle's bell.

"We don't need that ding-dongling any more. And who knows who might hear it?" he remarked, after the bell ceased to ring. Then he turned and moved on down the mountain.

"That's right, Lando boy. Just as well be cautious as not," said Esau.

And Cooper added: "Good idy. That string of red trailers we spied at dusk last night are used to climbing, and they may be used to crossing the snow cap. When it got too dark for them to track us last night they may have posted right off to this side."

"And if—if they did, they're over here now. Yes, over here somewheres this blessed minute, the whole big bunch of 'em, waitin' for us to show up," suggested Esau.

"That may be. To be sure it could be," Sanders answered. "But, for my part, I'm going to hope we've run off and left those varmints on the other side of this big jumping-off place."

"All right to hope that, Abe, provided we don't count on it too strong," remarked Cooper. "The hard fact is, though, that we may run across some of 'em or all of 'em at any minute, and have to battle for our lives. We don't want to forget that. All right to hope for the best, provided at the same time we're ready for the worst."

In spite of their great weariness, the whole party stumbled and toiled slowly down the mountainside till they were among woods. Here they began to see signs of life—larger life. Ever since leaving the ice they had been seeing conies and bushy-tailed ground squirrels. Now Cooper, leaving his fellow-wanderers, straggled off to one side till out of sight. A little later the report of his rifle was heard, and he returned carrying a pheasant.

Not very much farther down the party came to a bench of the mountain, where they found a grassy opening and a big, boldly-flowing spring. Here they went into camp, glad of a chance to rest at last.

After laying off their own packs, unsaddling the cow and turning her loose to graze, the whole party threw themselves down on the ground or on their blankets to rest. The sun and the air were warm, and nobody was any longer troubled with cold.

So nearly exhausted were they all that it was not till they had been resting more than an hour that they could summon energy enough to get up, gather a little wood and strike fire. After that some of them made up batter and cooked flapjacks, and each broiled for himself a piece of the pheasant. Half starved as they were, there was not half enough. But they made it do for a breakfast.

After eating, and drinking from the spring, they all threw themselves down on the grass to rest and sleep. In spite of the known danger from redskins, Frisk was left to do all the watching for the party. And Brindle, without either hobbles or bell, was turned loose to shift for herself.

Not till an hour or two past noon did any of them awake. Then Cooper sat up and gazed around for a few minutes. On the grass by the little stream lay Brindle, stretched at full length in the warm sunshine. Having satisfied her hunger, she was resting and sleeping. Frisk was also stretched out and asleep.

"Boys, I'm thinking we'd better bundle up and get down the mountain a few miles further before night overtakes us. For one thing, we want to locate some big game if we can, to fill up our hollow stomachs. We can find a better camping place down there, I think. And the farther we travel in that direction the less likely those red wolves will be to trail us down."

One by one the men awoke, rubbed their heavy eyes, gaped, stretched and then gazed around stupidly while they felt of their sore legs or feet. When they were fully awake and Cooper had repeated his advice, they all agreed that that was doubtless the wisest thing to do under the

(Continued on page eighteen.)

Bits of Fun for Everyone

Me, Too, Neighbor.

Jack—I notice you got up and gave the lady your seat in the street car the other day.

Fred—Since childhood I have respected a woman with a strap in her hand.—Exchange.

Wants to Keep His Customers.

"Will you love'n honor?"

"Uh-huh."

"Lady, are you all set?"

"S'nuff! He's your'n. Ten bucks. If you need my service again, I make special discount to old customers."—The Railroad Telegrapher.

The Universal Number.

Uncle Jack wished to talk to Mary's father at his office. He could not find the telephone directory, and so appealed to 3-year-old Mary for information regarding the telephone number: "Mary, what does mother ask for when she talks to daddy at the office?" he inquired.

Mary was wise for her days. "Money," she lisped.—Sheffield Telegraph.

A Question of Terms.

Isaac Blumstein had a toothache. A friend recommended a dentist. So Isaac went to his office. But on the door he read: First visit, $5. Subsequent visits, $2. This was pretty tough for Isaac. He thought a minute very hard and then he opened the door and walked in with a chirrupy:

"Good morning, doctor! Here I am again."—Exchange.

Economy.

Motorist—"I have not paid a cent for repairs on that machine during all the 10 months that I've had it."

Prospective Buyer—"So the man who repaired it told me."—Exchange.

Breaking the News Softly.

Brown always did possess a soft heart. This is how he wrote: "Dear Mrs. Harrison: Your husband can not come home today, because his bathing suit was washed away. P. S.—Your husband was inside it."—Exchange.

Why He Didn't Marry.

"Why have I never married?" The confirmed bachelor repeated a leading question. "Well, once upon a time in a crowd I trod on a lady's gown. She turned, furiously, beginning: 'You clumsy brute!' Then she smiled sweetly, and said: 'Oh, I beg your pardon. I thought you were my husband.' "—Pittsburgh Chronicle Telegraph.

A Cork Needed.

The train came to a stop at the edge of town beside the glue factory, and the odor was most obnoxious. A dainty young miss took a bottle of lavender salts from her handbag and sniffed vigorously. In a minute or two the old gentleman behind her looked up from his paper, sniffed suspiciously at the air a time or two and tapped her on the shoulder.

"You'll have to cork up that bottle, lady," he said." I can't stand that awful smell any longer."—Successful Farming.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Family Circle Girls

Dear Family Circle Girls: I have many letters from you and some do not give me names and some do not give addresses, but ask a lot of questions. You must give both if you want the best service and if you don't some of you will have no attention as I shall only answer questions of interest to a great number in the paper. I will never print your names, so you need not fear. Address me always in care of THE FARMER.

It is proper to thank a young man pleasantly for any courtesy like helping you on with your coat and such attentions, but it's customary for the man to thank a lady for a dance and a smile and a slight bow is sufficient acknowledgment.

I have many inquiries as to how to overcome bashfulness. It is something many young people are afflicted with and it makes them awkward and feel unhappy.

Bashfulness comes from self-consciousness, so the best way to overcome it is to try to forget one's self. As a means to that end I would suggest that every care be taken to have one's dress as neat and becoming as possible. Be free from any fears that a pin has loosened and that your clothing is out of place. Have every button fast and your hair as becomingly dressed as you can.

Next remember that we are all "just folks," all of us American citizens and a part of this great republic. Remember that character is always the real test of a man or woman, and if you are living your life day by day and trying to do your best you are of just as much account as any one else.

Think of these things by yourselves and then when you are out in company try to forget yourself as much as you can and watch for the good things in the people about you. If there is some one who doesn't seem to be having a good time seek him or her out and try to increase the pleasure. Should there be an old person in the company, some old aunt or uncle or grandmother, pay them attention. They are so often ignored and do feel left out and lonely. This will take your mind off yourself. Find out what interests those you meet and draw them out and then be a good listener. Never mind if you have things you want to say, cultivate the happy art of listening. Nothing will help you more to being considered a good fellow. Try it. When you meet a stranger and begin to feel that bashfulness coming over you force yourself to look the person quietly and calmly, but steadily, in the face for a few seconds and sort of get hold of yourself. Learn to look courteously at a person without anything like a stare.

Remember all the time that you are just yourself and have your place in the world and try to do yourself justice. A little practice will begin to tell and you will begin to have what we call poise. This will apply to boys as well as girls for boys, too, are afflicted with bashfulness.

"Should a girl accept money from a man friend?"

No, she never should, under any circumstances. No girl should place herself under obligation to a man friend. She should have too much pride and independence. It is an accepted custom that good taste forbids the acceptance of anything from men friends by women except books, flowers and candy. After an engagement one can accept other gifts. I am sure you girls want to know what it considered proper and in good taste.

"Is it wrong to powder and paint?"

The way very many of the girls are using powder and paint I think it is decidedly wrong and certainly in very poor taste. I see them every day, young girls not more than 14 and 15, with lips painted, eyebrows penciled and faces one general smear of red and white paint and powder. Oh, if they could know what they look like I am sure they would run home and get it off. I can not understand how a mother can permit a girl to appear in public fixed up to look as only poor outcast street girls and women used to look a few years ago.

Oh, girls! Don't be afraid of being old-fashioned, keep your skin clean, sleep eight or nine hours every night, take care of your health and your complexion will take care of itself. Use just a dust of powder.—A. W. Barland.

Dear Mrs. Barland: I notice in your reply to "Billie's" letter you ask the girls their opinion about dancing. I can not express myself very clearly on the subject, but I think it is all right. Of course I'm rather young, only about 17, but I think if one is careful about the places she goes to dance everything will be all right and one can have a great deal of fun and still retain one's good name and character. Some think these are jeopardized if not ruined by dancing.

Dancing is surely much better than petting parties and questionable car rides and I think dancing more fun than they could be. I have been going with the same boy for about a year and I like him because he is different from the others. He isn't "a good-goody," but he is different and has given up smoking at my request.

I am in high school and am trying to decide what to take up. I like to write and have been told I have a talent for writing. I also like elocution, but as yet have had no training in either.

Is bobbed hair really bad taste? Mine has been bobbed for nine months and I do like it this way as it is becoming, my friends say, and is so easy to take care of. It is rather curly and I hate to think of letting it grow out. I hope I haven't taken too much of your time. "Bobbee," Ore.

"Bobbee," enjoy your hair the way it is till you are tired of it. Since bobbed hair has become so common that girls do not look conspicuous that way I wouldn't call it bad taste. But as I said before it is only a fad and all of you will be going back to hair pins before long. —A. W. B.

DOING DOUBLE SERVICE.

"Johnny, rearrange the letters h-t-o-l-c so as to make a word meaning something that we could not get along without," said the teacher. Johnny thought and thought, and finally gave it up. Teacher undertook to help him.

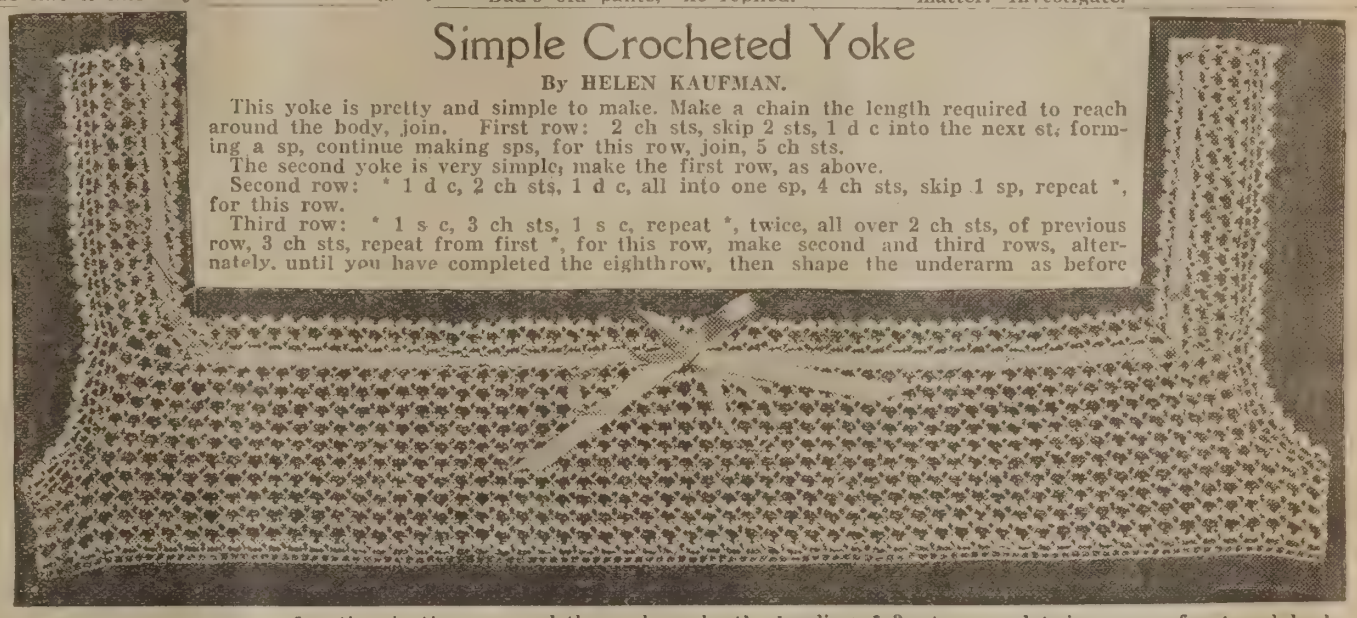
"What is your coat made out of, Johnny,"

"Dad's old pants," he replied.

Nightfall on the Farm

By JULIA M. MARTIN.

While breathless millions flutter by,
So gay on lightly proffered arm,
We'll closer, dear ones, draw the ties
Of precious kinship on the farm.
We'll softly sing the mellow songs
That sweeter grow with age's test.
Too rich our hearts for melodies
That tinkle from the shallow breast.



While restlessly they burn the road,
Or fearing pause for thought they dance,
We'll sip, tonight, the finer smiles
Unknown to flitting favor's glance.
While transiently so gay they go
To flee a shuddcrous morrow's leer,
We'll celebrate unselfish love
And guard our kinship doubly dear.

TWO INCHES TOO LOW.

Is the sink in the kitchen too low, too high or just right? That is an important matter. Investigate.

Simple Crocheted Yoke

By HELEN KAUFMAN.

This yoke is pretty and simple to make. Make a chain the length required to reach around the body, join. First row: 2 ch sts, skip 2 sts, 1 d c into the next st, forming a sp, continue making sps, for this row, join, 5 ch sts.

The second yoke is very simple, make the first row, as above.

Second row: * 1 d c, 2 ch sts, 1 d c, all into one sp, 4 ch sts, skip 1 sp, repeat *, for this row.

Third row: * 1 s c, 3 ch sts, 1 s c, repeat *, twice, all over 2 ch sts, of previous row, 3 ch sts, repeat from first *, for this row, make second and third rows, alternately, until you have completed the eighth row, then shape the underarm as before and continue the pattern for the depth desired, finishing with the second row, break thread. Repeat for the back. Make the shoulder straps separately of second and third rows, repeat twice and sew to the front and back.

Around the neck, make the beading, * 3 d c over 2 ch sts, catching them together on the 3d st, as before, 3 ch sts, repeat *, around front, back and straps, then make second and third rows, once around the straps and twice across front and back.

Repeat first, second and third rows around the armholes.

The yoke may be made any size, according to the first ch and any depth desired.

Home Recipes

A Remedy for Burns—Cover the burn with sweet cream, all you can put on, then over this put talcum powder and wrap up. This has been used for a bad burn and there was no blister. Use thick cream and more than once if necessary.—Mrs. E. A. H., Oregon.

To corn beef: To 100 pounds of beef use four pounds salt: boil the brine well and cover the meat and let stand 36 hours. Remove meat from the brine and let dry over night or 10 or 12 hours. Make a new brine, using five pounds of salt to 100 pounds of meat, one pound of brown sugar, one-fourth ounce of saltpeter, one-half ounce black pepper. Boil these ingredients with the brine and pour over the meat, careful to keep the meat well covered. Should a slimy substance form, the meat should be taken out and cleansed as before and this same brine boiled and skimmed as long as any substance rises to the top. Put the meat back into the barrel and keep covered by a weight over the top. MRS. J. W. OSBORN.

Cake Dressing or Pudding Sauce.

Two cups brown sugar, one cup boiling water, pinch of salt, one teaspoon butter, two tablespoons cornstarch, one-half teaspoon lemon extract, unless for fruit cake or pudding, then use vanilla. Put this on stove in saucepan and cook till thick. Use as cake filling or as a pudding sauce. (If for the latter it is better hot).

Iodine can be removed from clothing by rubbing the spots with glycerine, allow to stand two hours then pour very hot water over the spots and wash garment in medium hot water and rinse well. —Mrs. L. S. H., Idaho.

Prune cake: One cup sugar, two cups flour, one teaspoon soda, one teaspoon cinnamon, one-half teaspoon cloves, same of nutmeg, one egg, one and one-half cups of prunes, one-half cup butter or thick cream, a little salt, and bake in a slow oven. MRS. W. H. T.

To can chicken: Kill the fowl and draw at once; wash carefully and cool thoroughly. Cut into convenient sections if you wish to can with the bones in. Scald in boiling water and dip at once into cold water. Pack immediately into glass jars, fill with boiling water, add a level teaspoon of salt to each quart, put caps and rubbers on cans, but not tight, and sterilize for three hours after water begins to boil. This can be done in a common wash boiler with a wooden frame placed in the bottom.—United States Bulletin.

Advance Announcement of

FREDERICK & NELSON'S

48th Semi-Annual Furniture Sale

HERETOFORE Frederick & Nelson's Semi-Annual Sales of Furniture have been held in January and July of each year. Beginning next year, these Sales will be held, instead, in February and August.

It is, therefore, thought proper to call the public's attention at this time to the fact that the next Semi-Annual Sale — the forty-eighth successive event—will begin **Thursday, February First, 1923.**

FREDERICK & NELSON
Fifth Avenue and Pine Street.
SEATTLE.

Farm Credits Take Limelight

Big Propositions Are Pending at the National Capital

Legislation to give the agricultural producers a fairer and better credit system is assured of enactment at an early date. The only question at this time is the extent of the reform and its methods. Numerous bills are now before the senate's banking and agricultural committees, but the representatives of the great farm organizations and members of the agricultural bloc have not settled down to a definite program of legislation.

A bill introduced in the senate by Lenroot of Wisconsin, and in the house by Anderson of Minnesota, embraces principles acceptable to the Harding administration. It would make the 12 federal land banks the agency through which better credits would be extended to farmers. It increases the capital of each of the federal land banks from $1,000,000 to $5,000,000, a total of $60,000,000 capitalization, as against $12,000,000 at present. A farm credit department is created as an annex to the federal land banks, and the bill gives them larger powers of lending, while at the same time putting them into the business of making direct short-term loans to farmers.

It also proposes a number of amendments to the federal reserve act. One would impose a limitation upon the profits of the federal reserve banks.

"These changes," said Senator Lenroot, "have been approved by the secretary of agriculture, members of the farm loan board and also, I understand, by the treasury department."

It is said that this bill is acceptable to Senator Capper, head of the farm bloc. It is reported from Washington, however, that republican insurgents, assured of democratic aid, are threatening to oppose the Lenroot-Anderson bill as inadequate to meet the needs of agriculture.

At this writing it looks as if the attitude of the farm bloc toward the Lenroot-Anderson bill will be largely determined by the attitude of other senators and the administration toward the bill of Senator Norris of Nebraska to establish a $100,000,000 government corporation to finance sales of agricultural products. The general feeling is that the Lenroot-Anderson bill is a good measure in the right direction, but not adequate to the urgent needs of the farmers, and the Norris bill is regarded as a supplemental measure intended to round out the demands of the aggressive farm leaders.

The senate agricultural committee last week ordered a favorable report on the Norris bill. It has not yet been given the administration's approval and Eugene Meyer, director of the war finance corporation, told the senate banking committee he was opposed to it.

The Norris bill proposes a permanent government corporation to deal in agricultural products. It would be composed of three members, appointed by the president, and would have power to issue $500,000,000 in tax-exempt bonds. Its $100,000,000 capital would be subscribed entirely by the government and it would have authority to operate government ships and buy, sell, lease and operate elevators.

Representatives of large cooperative marketing associations were before the banking committee last week, and a sharp difference of opinion developed between Aaron Sapiro, attorney of a number of California cooperative associations, and George B. Jewett, representing the Northwest Wheat Growers, Associated. Mr. Sapiro advocated an elaboration of the federal reserve board and the placing of farm financing in its hands, with an independent organization for assistance. He would make use of existing banks for getting loans to farmers, and he favored state action instead of national in the provision of loans on growing crops.

"We do not object to this plan, but we are certain it does not go far enough to be of much benefit to our western farmers," said Mr. Jewett. "Our country banks need and will welcome federal assistance in financing agricultural producers. They are not in shape, in many sections, to care for their patrons without some help. American farmers are inclined to look with doubt on any proposal to place the agricultural credit work in the hands of the federal reserve board. They feel that it is a commercial and industrial banking institution and that agriculture is an important and large enough industry to have its own agency. The plan for state action to provide growing crop credits is impractical. We need credit now and next spring, not 10 years from now. In many states constitutional amendment would be necessary before such action could be taken. In others initiative measures would have to go before the voters. In the meantime more and more American farmers would be forced from their lands, until by the time the credit organizations were ready to function there would be mighty few farmers for them to extend credit to."

Cooperative marketing of farm crops received assurances of support from members of administrative, executive and congressional branches of the government at the first national council of farmers' cooperative marketing association.

Secretary of Commerce Hoover, Eugene Meyer Jr., managing director of the war finance corporation, and Ralph C. Miller, member of the federal reserve board, told delegates that commodity associations had done more toward restoring financial stability in the United States than any other factor, and Senator Capper of Kansas, leader of the senate farm bloc, declared the prospects were growing better daily for action on rural credits legislation. Permanent organization of the national council of farmers' cooperative marketing associations was authorized in the closing session.

Creation of a farm credits department in federal land banks with capital sufficient to issue farm credit to the maximum of $600,000,000 was another project indorsed by the conference.

The interstate commerce commission was requested by the conference to institute hearings to open up the whole question of revision of freight rates, with a view to possible lessening of the burdens borne by shippers of primary commodities.

Among the bills to be taken up by the senate banking committee is one by Senator Borah, to limit the profits of joint stock land banks to six per cent.

A one-third reduction in freight rates on agricultural products was proposed in a bill introduced by Senator Gooding of Idaho.

The present congress will expire on March 4, next. Undoubtedly it will enact remedial credit legislation, but whether it will be able or willing, in the brief time between now and March, to work out the railroad problem and give the farmers relief in reduced freight rates is doubtful. Leaders of the agricultural groups in the house and senate are particularly anxious that there should be some solution of the railroad problem that would bring lowered freight rates, but Chairman Cummins of the senate interstate commerce committee said that comprehensive legislation along the lines recommended by Mr. Harding could not be had at this session.

THE FARMER is glad to report this encouraging manifestation at the national capital of an aroused and deepened interest in the welfare of the American farmers. There seems to be unity of opinion that the farmer has not had a square deal in the past, and the proposed relief is along the lines that we have been urging for many, many months—better and fairer credit facilities for the farmer, better and cheaper transportation service. We are confident that if congress and the administration will handle these problems with fairness and wisdom, agriculture will be assured of real and enduring relief, and that from the resulting prosperity of the farmers all elements of our population, including the workers and business men in the cities, will enjoy a reflected benefit and prosperity.

The real and the fair test of the measures that are to be enacted at Washington is: First, will they benefit agriculture? and, second, will they benefit the nation as a whole? All that the fair-minded farmers of this country want is a square deal; they are not asking legislation that would benefit them to the injury of the rest of the American people.

High Points in News of the Week

The possibility of the United States calling an international economic conference to be held in this country similar to the manner in which the conference for the limitation of armaments was called, is being discussed in Washington, D. C. The inability of Europe to solve her financial and reconstruction problems, together with insistence from across the sea that this country take part in her troubles, has led to the possibility. Speculation has also arisen as to the likelihood that France and England will ask this country to arbitrate between them as to how much reparations Germany shall pay and when.

The conference between the premiers of France, Italy, England and Belgium last week failed to reach an agreement. In fact, agreement appeared far from probable. France continues her determination that unless agreement is reached before January 15 her army shall invade the Ruhr district of Germany and take charge of it as penalty for failure of Germany to meet the terms of the peace treaty.

* * *

While the United States government shows no inclination to cancel any of the war debts of foreign countries, there is reported to be a likelihood that some interest payments may not be insisted upon.

* * *

Trial of a large number of coal miners in the Herrin, Ill., district, is now under way. The men are charged with murder in connection with the massacre of a number of strike breakers several months ago. Feeling is running high at Herrin, and it is reported that an organization of law-abiding citizens has been effected to guarantee the safety of those who testify against the defendants. One organization is declared to have gone on record as determined to take 10 lives for every witness who may be slain as a result of testimony adverse to the alleged murderers.

* * *

John Wanamaker, former postmaster general and known the world over as a great American, died in his home in Philadelphia last week.

* * *

Steps were taken at a fruit convention in Sacramento, Cal., last week looking toward improved transportation service during the shipping seasons in the future. The convention was attended by representatives from nearly all the Pacific slope states. A transportation committee was appointed to endeavor to secure guarantees of adequate car service next season.

* * *

Reports from various nations that attended the disarmament conference in Washington last year indicate a general compliance with the plans for reducing naval armaments. On the part of the United States and Japan, suspension of building programs constitutes the chief compliance with the treaty. England reports the destruction of a few minor war vessels.

* * *

The highest total wheat yield in Canada since 1915 is the estimate of the 1922 crop just issued by the dominion bureau of statistics. The estimate places the total wheat harvest at 319,425,000 bushels. Last year's final estimate of total yield was 300,858,100 bushels. The total yield of oats for 1922 was 513,033,000 bushels and has only once been exceeded.

Farm Business and Markets Outlook

(Continued from page five.)

white, Bluestem, Bart, $1.50; soft white, western white, $1.25.

Grain futures: Wheat—Bluestem and Bart, December, January, February, $1.50; soft white, western white, December, January, February, $1.25.

Just Folks

The common things of life may be the most interesting after all.

This morning at home I took up the daily paper and I do not think there was an article or item in it that struck my fancy more than a cablegram sent by the Associated Press from Lausanne, Switzerland, where the big diplomats are gathered in the Near Eastern conference.

This item sent over the world by cable tells how Mussolini, who is called Italy's cyclonic premier, and who has been making old school diplomacy gasp, made it startingly plain that he had not forgotten the day when he was a butcher's boy. Having gone to the railway station to say goodby to Premier Poincare of France he was returning by automobile to his hotel, when he suddenly stopped the car before a butcher's shop run by an Italian. He darted in and wrung the hand of the astounded propfietor, exclaiming: "I hope you have not forgotten me; you know I worked for you 15 years ago."

Later, walking to the office, I passed the president of the leading bank in town. He was screening coal ashes. He pointed with considerable pride that he had saved a tubful of good coal out of two tubfuls of ashes. Of course, there was no urge of poverty that made him do this, but like every red-blooded American, he enjoyed doing chores out in the open, and, what is more, he made of thrift a high accomplishment, regarding preventable waste as the token of vulgarity.

Before reaching the office a girl in her later teens, in commonplace dress, stopped me to ask about the location of a certain street in the city. She had taken the wrong street car and it had left her where she was lost. I was not familiar with the street named, and asked another man who came along. While we were trying to locate the street the county superintendent of schools came along and joined in the common effort to give an intelligent answer to the young woman. Finally, the county superintendent said: "I have my car here and am going with my wife to Cheney, and if you like will take you over the bridge and locate the street you desire."

A few blocks farther in my walk I passed a nice, little brick shop on the busy corner of the street. It had just been put up under the elevated railroad track. It had been built for "Happy Jack," who is blind and who had been living and peddling papers, gum, peanuts, etc., from a miserable little shack, a few feet away. I had learned that the business men of the street had a fondness for the cheerful bravery with which Happy Jack was meeting the fortunes of life, and wishing to do away with his ill-favored shop, had prevailed upon the railroad company to permit them to put up a fine-looking one-story brick building, with a little living room for Happy Jack in the rear and a good little shop in front.

I reached the office, more than ever convinced that the world was not so very bad a place to live in after all.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3858. Junior's Dress—Cut in three sizes: 12, 14 and 16 years. A 14-year size will require 3 yards of 38-inch material. Price 10 cents.

3976-4226. Ladies' Costume—Waist 3976 cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4226 cut in seven sizes: 25, 27, 29, 31, 35 and 37 inches waist measure. The width of the skirt at the foot is 3 1-8 yards. To make this dress for a medium size, of one material, will require 5 1-4 yards of 40-inch material. Two separate patterns, 10 cents for each pattern.

4216. Lady's Day Dress—Cut in seven sizes: 36, 38, 40, 42, 44 46 and 48 inches bust measure. A 38-inch size requires 3 3-4 yards of 54-inch material. The width of the dress at the foot is 2 1-4 yards. Price 10 cents.

3469. Dress for Breakfast or Service—Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. The width of the skirt at the foot is 2 yards. It will require 7 3-8 yards of 27-inch material for a medium size. Price 10 cents.

4082. Lady's Dress—Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. To make the dress for a 38-inch size requires 6 yards of one material 32 inches wide. As illustrated, it will take 2 1-2 yards of plain material for sleeves and front, and 3 3-4 yards of striped material. The width of the skirt at the foot is 2 1-4 yards, with plaits extended. Price 10 cents.

3868. Lady's Apron—Cut in four sizes: Small, medium, large and extra large. A medium size requires 2 1-2 yards of 36-inch material. Price 10 cents.

4208. Girl's Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 3-4 yards of 32-inch material. Price 10 cents.

4207 Girl's Dress—Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

4220. Boy's Trousers and Knickers—Cut in five sizes: 6, 8, 10, 12 and 14 years. An 8-year size requires 1 yard of 54-inch material for either style. Price 10 cents.

4223. Boy's Blouse—Cut in five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 2 7-8 yards of 32-inch material. Price 10 cents.

4222. Girl's Costume—Cut in six sizes: 4, 6, 8, 10, 12 and 14 years. A 12-year size requires 2 1-2 yards of 27-inch material. Price 10 cents.

4045. Lady's Negligee and Cap—Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 5-8 yards of 32-inch material. The cap alone requires 1-2 yard. Price 10 cents.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color the buttermilk. Tasteless.

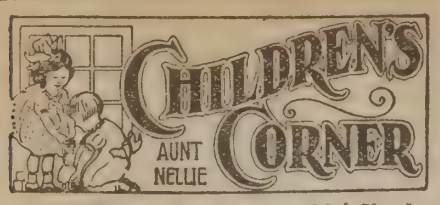
White-of-Egg in Calumet a Vital Element Most Baking Powders Lack

Don't use a leavener that does not contain white-of-egg. When you do you take chances—you run the risk of spoiling your bakings.

CALUMET

The Economy BAKING POWDER

contains a small amount of white-of-egg. This makes it possible for representatives of the company to test it frequently for leavening strength—right on the dealer's counter. Nothing but absolutely fresh stock is permitted to remain on the dealers' shelves. It must always be up to the high Calumet standard.



Remember the white-of-egg in Calumet protects the success of your bakings. It is the economical positive bake-day aid and its sale is 2½ times as much as that of any other brand.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

THE WORLD'S GREATEST BAKING POWDER

Sylvia Wilson is 10 years old. She has a white rabbit and two baby bunnies for pets. The Wilsons raised 150 young chickens on their ranch in Spokane county, Wash, this year Sylvia says 12 children attended school where she goes She has a very nice teacher

Birthday Greetings

SATURDAY, December 23—Ella Ray, 10 years old.

SUNDAY, December 24—Bill Cettla, 10 years old; Erick Cettla, 10; James Sheahan, 11.

MONDAY, December 25—Dorothy Barry; Ethel Hinderbrandt, 7 years old.

TUESDAY, December 26—Margaret Taylor, 11 years old; Pauline Brandt, 11; Beryl McCarthy, 10.

WEDNESDAY, December 27 — Doris Jones, 10 years old; Marie Wichert, 10.

BEDTIME STORIES

By THORNTON W. BURGESS.

JOHNNIE LOSES HIS TEMPER.

Nowhere on all the green meadow or in the green forest is there a better-natured little chap than Johnny Chuck. He is so good-natured that Reddy Fox used to sneer at him and say that Johnny didn't fight because he was a coward and didn't dare. But Reddy Fox doesn't say that now. My, my, I guess not! You see, it happened this way:

Johnny Chuck had been growing. He was stout and he was strong. But Reddy Fox hadn't noticed this. He thought of Johnny Chuck only as the timid little chap who first made his home under the apple tree and was almost afraid of his own shadow.

So one day when Johnny Chuck lost his temper Reddy Fox was treated to the greatest surprise of his life, and ever since then he has had the greatest respect for Johnny Chuck. Johnny was out for a morning walk. He was strolling down the lone little path without a care in the world. when he heard a thin, little voice squeaking pitifully over behind a clump of tall meadow grass. "Don't. Oh, please don't!" begged the voice.

"I'm going to eat you up when I get through having some fun with you," replied a gruff voice. Johnny Chuck recognized it at once.

Johnny stole softly up behind the clump of tall meadow grass and peeped through. What he saw made his blood boil. His eyes snapped and he doubled up his fists. There was Reddy Fox knocking poor little Danny Meadow Mouse about. Danny's clothes were torn, his face was scratched, and he was so frightened that he had lost the little bit of voice that he did have. Reddy Fox was enjoying himself. There was no doubt of that. He would let Danny Meadow Mouse run a little way, just far enough for Danny to think that perhaps he had really escaped. Then Reddy would pounce on him.

There was Reddy Fox knocking poor little Danny Meadow Mouse about.

Something snapped inside of Johnny Chuck. He forgot that he had ever been afraid of Reddy Fox. He forgot that Reddy was much bigger than he. He forgot everything but rage. He landed on Reddy Fox like a whirlwind. He took Reddy so by surprise that Reddy was knocked clear off his feet.

"Coward!" roared Johnny Chuck. "Why don't you take some one your own size."

They tell about that fight on the green meadows even now. At first Reddy Fox, forgetting that Johnny Chuck had grown, thought that he would soon teach Johnny not to meddle in other folk's affairs. But he soon found that he had got more than he had bargained for. Then his one thought was to get away. But Johnny Chuck wouldn't let hi mgo. My, how those stout little feet of Johnny's made strong by digging in the hard earth, did hurt! Reddy's beautiful red coat was soon in tatters. His tail was a sight. When finally he broke away he was a sorry spectacle. He sneaked off to the laughing brook to clean himself up, for he did not dare to go home looking so.

"Hurrah for Johnny Chuck!" shouted all the little meadow people, who had gathered to watch the great fight.

"That's nothing," said Johnny Chuck, who had recovered his temper and now felt rather ashamed. Then he put his hands in his pockets and strolled over to the house of Danny Meadow Mouse.

Pike's Peak or Bust

(Continued from page fourteen.)

circumstances. So they saddled and packed the cow, strapped on their own packs, shouldered their guns and were soon making their slow way down the mountain.

When they had traveled a few miles, Holloway, still leading the party, was heard to say: "I believe we've struck our old trail—the trail we followed on our way over. Seems to me I recollect that big boulder."

A mile or two farther down, when the travelers came to a great rock rising 20 or 30 feet, Holloway exclaimed: "Now don't you see? There's Grizzly Bear rock—the rock we'd camped by when we had the scrimmage with that big varmint."

"Looks for all the world like the same rock to me," spoke out Orlando. "But I wouldn't be dead sure till I see the other side."

When at the east wall of the great rock they found the same grassy glade, the same tiny spring flowing from under the rock, and the dead ashes of an old campfire.

Now Givens exclaimed: "Very identical spot! Right here it's camp again! And let's stay here till we're all well rested and well fed, if it takes a week of Sundays. We've had a hard race for our lives and now we're entitled to pick our teeth and take things easy for a while."

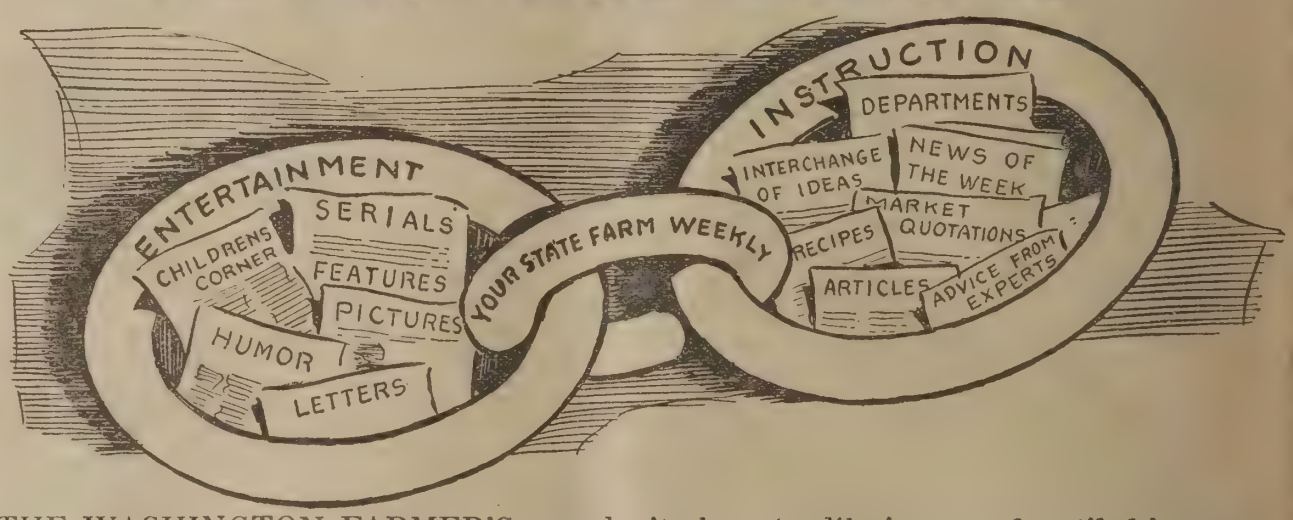
"If we camp here again we're likely to have another fracas with that bear," Sanders suggested.

"Fracas or what not, bear or what not, I'm in for camping," Cooper declared. "And whatever comes, varmint or redskin, we'll have it out with 'em. For my part, I'm weary of this hotfooting it. Six able-bodied men, every man with a rifle and a six-shooter—42 shots in all—ought to give a good account of themselves in a battle."

"And this rock wall will be a bully thing to back up against," was Holloway's remark.

All were both willing and glad to stop, and they lost no time in making camp. Their fire they kindled where their first fire had been. While some were doing that and collecting wood for fuel, the others took up their rifles and set forth in quest of meat for supper and breakfast.

(To be continued.)



LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in the Junior Farmer:

LINKED TOGETHER

TWO GREAT ESSENTIALS FOR THE FARM HOME MAGAZINE-

THE WASHINGTON FARMER'S popularity has steadily increased until this magazine is now welcomed in every nook and corner of the Evergreen state.

The reason is that it is just suited to the needs and likes of the thousands. It offers an ideal combination of informative and entertaining matter. It gives the facts which you can use in solving your problems, and also prints live fiction, interesting pictures, bits of wit and humor, side-lights on forceful personalities and other entertaining matter.

This variety of worth-while articles can be obtained at a low subscription price on account of our cooperative subscription plan. For the seventh season we ask our readers to assist us in eliminating the subscription agent. We say to you, Send in your subscription orders direct. Get your neighbors to do the same. If your own order is attended to for the year send us at least one new subscription. We will and do give you and your neighbors the benefit of every penny saved, both in the form of a low subscription price, and by giving you a magazine of high quality in every department.

In your neighborhood will you please act for us in giving our cooperative plan a real boost?

Dec. 21, 1922.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

News for Breeders

NEW GUERNSEY CHAMPIONS.

Announcement of two new northwest Guernsey championships is contained in advanced register records approved by the American Guernsey Cattle club the last two weeks in October, which include five made in the Pacific northwest, three of them in Oregon and two in Washington. V. H. Harwood of Astoria, Ore., put a junior 2-year-old record of 619.90 pounds of butterfat on Imp. Lady Beauty of Ore Hill; W. O. Reith of Astoria one of 541.15 pounds on Adaline of Ore Hill, a mature cow, and Clyde Ringo of Mulino, Ore., one of 528.46 pounds on Mixter Golden Dean, a 6-year-old. The first is a new class G record for Oregon and has previously been announced in THE FARMER. The second is a new class AA record for Oregon and displaces that of 535.84 pounds of butterfat held for some time by Modele's Jolly Lass, owned by A. I. and J. Hughes of Oregon City.

On Melita of Chicona, a senior 2-year-old, A. L. Gile of Chicona put a record of 424.60, and on Effie of Hope Farm, a mature cow, S. P. Davis of Olga, Wash., put a record of 698.49 pounds.

HEAD THREE STATE HOLSTEIN HERDS.

Two sons and a grandson of Matador Segis Walker, the Carnation herd sire, headed the three state Holstein herds at the Pacific International this fall; the veteran grand champion, Matador Segis Walker 6th, led the winning Washington herd, and three other animals in it were shown by "Mat's" owners. They included May Walker Skylark, first prize 4-year-old and reserve champion; Carnation Matador Queen, second prize 4-year-old, and Sylvia Segis, first prize junior yearling heifer. John L. Smith had three in the herd: Hazelwood Heilor Butter King, first prize junior yearling bull and grand champion in 1921; Hazelwood Bessie Pauline Heilo, first prize senior yearling and junior champion heifer, and Hazelwood Sir Bessie Segis, first prize junior bull calf and junior champion. David Nisbet's club heifer, Olympic Greenbank Queen, first prize senior heifer calf, and two prize winners owned, respectively, by William Bishop and by Western State hospital, completed the group.

WINS GRAND CHAMPIONSHIP.

J. I. Hutchin of Lynden, a Holstein breeder and general farmer, had two typy females that he knew were good producers as well as good individuals and was persuaded to take one of them to the county fair at Lynden. Nettie Wayne De Kol, the older of the two, took first in her class and was made grand champion of the Holsteins. Mr. Hutchin has already made plans for coming out next year with a larger herd.

The herd was started in 1909, when Mr. Hutchin bought three head, a cow in milk, a heifer and a bull, from William Bishop and began to breed up the herd. He had exceptionally good luck and got only four bull calves out of the first 17 calves from the grade and registered cows. The percentage of heifers has been heavy for the last year and Mr. Hutchin is raising all of the promising heifers for milch cows.

A FIGURE LEFT OUT.

In the recent report of the Guernsey sale of Dr. P. W. Willis of Redmond, Wash., a typographical error made The Washington Farmer say that W. O. Peterson of Renton, King county, bought Sammamish Roxie for $10. Mr. Peterson paid 41 times $10 for this good old cow, which was a stablemate of the late world record Guernsey, Sammamish Topsy. Mr. Peterson is building up one of the good Guernsey herds of the state. He has had a registered bull in his herd for two years and now owns Topsy's Robin Hood, one of the good bulls produced on the Dr. Willis, Orchard Hill, farm.

MAY WALKER SKYLARK DIES.

Carnation stock farms report the loss of May Walker Skylark, the prize 4-year-old female and reserve champion at the Pacific International Live Stock exposition at Portland. The animal died shortly after returning from the Portland trip, death being due to trouble in calving.

DON'T SWEAR AT HIM.

No matter if the hog does root up his pasture or root his way out of the pen, don't get excited and swear at him. He's a hog, and has a nose especially designed for rooting.

THE AVERAGE IS LOW.

The average milk production per dairy cow in the United States is considerably below 4000 a year, or less than 500 gallons. The world record cow produced 37,000 pounds, or over 4500 gallons.

SELLS THREE JERSEYS.

C. E. Starr of Mud Bay, Thurston county, reports the sale of three registered Jersey heifers to J. H. Taylor of Montesano.

OIL MAKES EASY GOING.

A little oil smooths out many a rough place on the farm.

No scars—no blemishes

GOMBAULT'S CAUSTIC BALSAM does the work better than firing. Hair positively grows back natural color.

Northwood Herd of Milking Shorthorns

The general farmer's cattle are the kind that will produce milk and beef. Milking Shorthorns fill this requirement. We want to place out bull calves where they will improve the herd. We are pricing our calves within the farmer's means. Will give terms on satisfactory references. We solicit your inquiries.
NORTHWOOD FARMS.
Redmond, Washington.

Quality Ridge Angus

15 head of bulls, 20 head of heifers and young cows for sale at farmers' prices. Our herd carries some of the best blood of the breed.
Tuberculin tested.
Prompt reply to your inquiry.
J. A. HARRIS & SONS, Eden, Idaho.

Oreglow Jerseys

April bull calf, show record, dam and sire's dam long distance cows of the breed, priced right. Write for particulars.
OREGLOW FARM, Boring, Ore.
D. BROOKS HOGAN, OWNER.

Four Jersey Cows

Two with official tests, two on test. All good records, St. Mawes and Gertie's Lad breeding. Priced to sell.
G. W. LAWSON, McMinnville, Ore.

Allendale Jersey Farm offers bull dropped Mar. 29, '22. Outstanding individual. Golden Glow, Chief and Majesty cross. Price, registered, $100.
A. A. BINBY. Freewater, Ore.

When answering advertisements don't fail to mention this paper.

Fourth Gold Medal Jersey Bull

now in use in my herd. No other herd ever had so many. Young stock for sale.
ED CARY, Carlton, Ore.

Maple Ridge Farm offers for sale richly bred young bull ready for service; 3 nearest dams of sire average 841 lbs. fat; dam is R. of M. daughter of St. Mawes Noble. Bargain. Terms.
J. C. BROWN & SONS, Shedd, Ore.

St. Mawes Jerseys 4 St. Mawes heifers from 6 months to 18 also bull 6 mo. old, by son of St. Mawes Lad and R. of M. dam. Priced from $150 to $325.
SHADILANE FARM, North Powder, Ore.

Jersey Bulls at Bargain Prices

Send today for our special sale list of registered Jersey bulls from R. of M. dams. Easy terms, liberal credit.
WARREN GRAY, Box T. Jefferson, Ore.

Thousand Springs Farm Durocs

Three March boars, sired by Sensation Island King, a worthy son of Great Orion Sensation and their dams were sired by Wonder Sensation. Their sire was first prize Jr. yearling at Western Royal, second prize at Pacific International, and headed first prize aged herd. They were prize winners where shown. Priced to sell as low as $40, satisfaction guaranteed. Open and bred gilts same breeding, at a right price.
MAX M. MOREHOUSE, Mgr., Wendell, Ida.

RICHARDS CHAMPION DUROCS

We have 200 spring and fall pigs, the best we ever raised, all sired by our grand champion herd boars and out of Big Type sows. 50 boars now ready for service, 100 gilts now being bred for spring farrow. These pigs priced cheap to sell. Satisfaction guaranteed.
RICHARDS LIVE STOCK COMPANY.
VIRGINIA, IDAHO.

Durocs at Bargain Prices

Spring boars and gilts, Great Wonder breeding. Gilts bred to Sensation boar. Some of them state fair prize winners; all good individuals. Priced for quick sale.
J. E. FINNICUM, Dayton, Ore.

Cornell's Duroc sows were undefeated on show circuit. Choice lot of bred gilts priced to sell. Satisfaction guaranteed.
S. D. CORNELL, Grandview, Wash.

Aviator and Pathfinder Durocs

Choice spring gilts, bred to Oregon Aviator; also September boars. Have won wherever shown.
M. AVERHOFF. Albany, Ore.

The Big Wonder Herd

of big type Poland Chinas, offers a few choice boars, ready for service; sired by such boars as the 1200-lb. Giant Buster and Saint Peter, a great son of Peter Pan. Satisfaction guaranteed on all orders.
E. O. LOE, Silverton, Ore.

Poland Chinas Last chance to buy top fall pigs, either sex, at $15 to $25. All registered. 110 to pick from. Write at once.
FRED D. ENTERMILLE, Baker, Ore.

River Banks Berkshires

Long, smooth, deep, grand champion kind. Strong in the blood of most popular families of nation.
RIVER BANKS FARMS, Grants Pass, Ore.
CLYDE E. NILES, MGR.

Riverby Orchard Berkshires

Oldest established Berkshire herd in the northwest. Young pigs and bred sows for sale. Address
D. C. BUNN, Prosser, Wash.

Choice Berkshires

Few choice boars and gilts for sale; sired by Festline's Rus, junior champion Portland show.
PEARL WOOD. Gervais, Ore.

THE WASHINGTON FARMER

ESTABLISHED 1894

SPOKANE. SEATTLE.

THE Pacific northwest is becoming firmly established on the map of the live stock production industry. It is not an uncommon thing for animals from this territory to invade the great shows and bring back championships. Herewith is the picture of one that did it. The animal is Panama 110th, aged Hereford bull in the show herd of A. B. Cook of Townsend, Mont. He was senior and grand champion at the recent Chicago International Live Stock exposition.

We Should Standardize Wheat and Eliminate Inferior Varieties—Page 3

Grange Campaign

Pushed in State of Washington

F. E. Waters of Grangeville, Idaho, who is deputy of the Idaho-Washington grange, recently organized a subordinate grange at Covada, in Ferry county, Wash., at which there were 26 charter members. G. B. Hass was made president, Mrs. Marie Hass lecturer and E. E. Jones secretary.

"Between now and February 1," said Mr. Waters, "I expect to organize in eastern Washington, starting in at Walla Walla county and finishing up at Ellensburg, Kittitas county. I will then go over to the Coast, where I will spend the balance of the winter."

That the grange warehouses are meeting with success in every section of the state is evidenced by the fact that there have been but two failures since they were started, Mr. Waters said. The first one, which was organized four years ago at Kent, King county, has done a wonderful business. These grange warehouses in eastern Washington, which are located at Malo, Ferry county; Meyers Falls, Colville, Newport, Impach and Pullman, are regular grocery and general stores, some of them even handling farm machinery and a small stock of hardware. At the present there are 60 of them in the state, all doing well. Most of these stores send their accounts to the head warehouse in Seattle and at that place all bookkeeping and accounting is done for them.

"The grange is going to put on an intensive campaign for organization," said Mr. Waters, "and we are looking for a good revival of grange work this winter."

The moral effect that the grange has upon isolated communities is well demonstrated in Ferry county, where a local was recently organized. "Its establishment there was nothing short of a godsend," Mr. Waters said, "for these people are 40 miles from the nearest town and they have to cross the Columbia river in order to get there. It is a wonderful thing socically for the women, men and even the children (for, as you know, any one attaining the age of 14 can join) get together and spend a profitable evening. They now have a good lecturer and at each meeting put on a splendid program."

The grange is said to be the first secret organization in existence in the world which admitted women into its ranks the same as men, and the grange has been outstanding in its fight for equal rights for women in every state where woman suffrage has come up.

Farm Credit Steps

What seems to be a backfire movement against the demands of the farm bloc in congress for better and fairer marketing credits on agricultural products was started at Washington last week, when the federal reserve board promulgated a new ruling. Officials declare that this decision, which makes agricultural paper eligible for rediscount for six months, instead of three, "should be of material assistance to cooperative marketing associations in financing the orderly marketing of crops." Acceptances of six months have been asked for by many agricultural organizations and the longer period is believed by officials more nearly to accord with the turnover period required by the farmer to market crops for whose production he has borrowed money. The new ruling requires that the acceptance shall be secured by warehouse receipts covering the products against which the acceptances are drawn.

Another development in this connection was the introduction by Senator Norbeck of South Dakota of a revised farm credits bill. It expands his former measure and would make the farm loan system the vehicle for extension of agricultural credits.

Since our last number we have fuller information about the Norris bill, which is now before the senate by a unanimous approving vote from the committee on agriculture. This bill would create a vast buying and selling agency for agricultural products, and is designed to cut out the profits of the middleman. As previously explained, this measure calls for the establishment of a government buying and selling agency for agricultural products, with extensive powers as to operating elevators and warehouses, and invested with authority to make advances for assisting export transactions. The capital stock of this government corporation is to be $100,000,000 and tax-exempt bonds for five times the capital may be issued. One provision of the bill is that the corporation, to obtain reduced rates for export shipment, may use without charge any of the shipping board's vessels not in operation. The real intent is to make this corporation the middleman, the committee stated. In further explanation of the bill the committee report says:

"Authority exists in the bill for the sale of products on time. It is believed that this corporation, especially in foreign lands, can sell the surplus products of the farmers of America on time, taking security that will be ample and then upon the basis of the security so taken issue its bonds and repeat the operation until its bonds so issued equal five times the amount of its paid-in capital.

"The committee believes that the bill provides the necessary machinery by which the sale of these surplus products in America to foreign countries can be properly financed and the situation, both in America and Europe, greatly reduced. We also believe that the corporation will be able to very greatly decrease the cost of living on food products in America, and, at the same time, provide for the sale of farm products at an enhanced price."

At this writing, Saturday, the senate is still deadlocked in a wrangle between the supporters of the Norris bill and the advocates of the administration shipping bill. Each side wants its measure taken up immediately and given right of way for debate, and the result of the deadlock so far has been to prevent consideration of either bill.

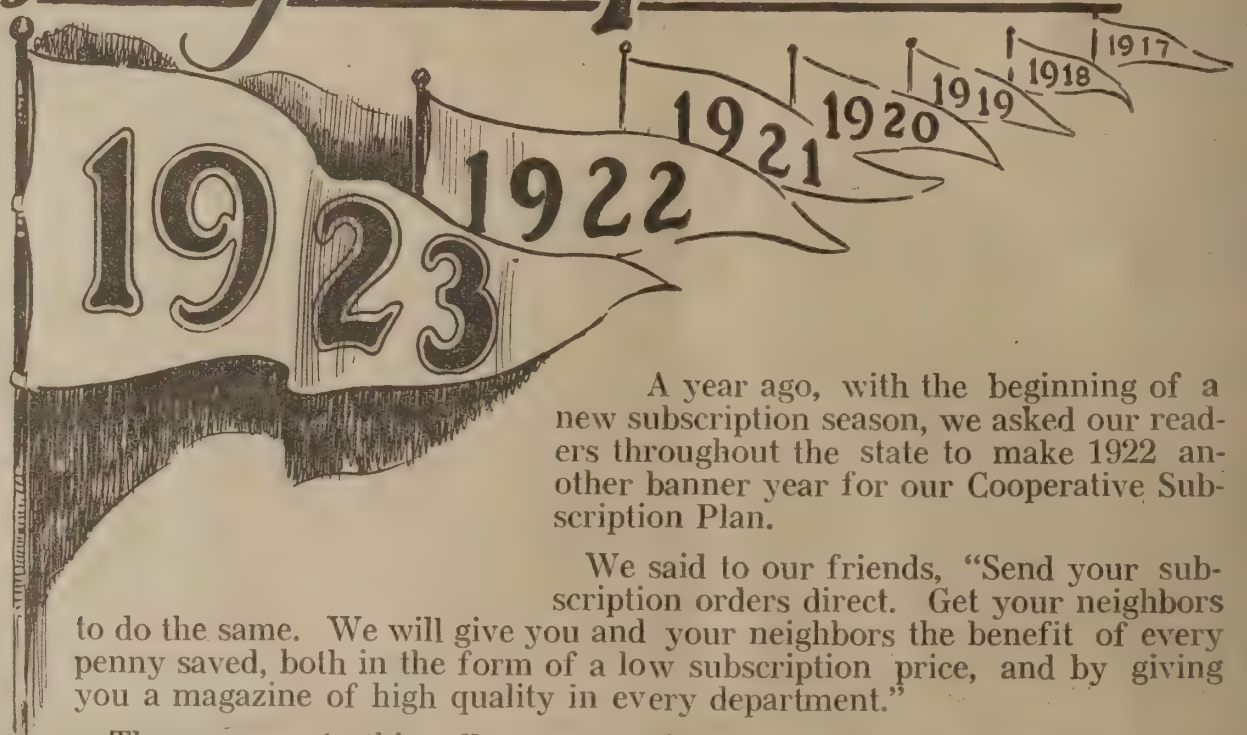
GIVE THE SOWS EXERCISE.

C. M. Hubbard, specialist in live stock, says: Have the hog pen in one corner of the lot, the hay rack in another and the trough in still another, so the breeding sows may get sufficient exercise.

Heg Bros. Dispose of Holsteins

Holstein breeders of the state will be interested in the complete dispersal sale of the Dr. E. E. Heg & Sons herd at East Stanwood, Snohomish county, December 6. The disposal of the animals was necessary largely because of the death of Dr. Heg, early in October and the decision of the two sons to dissolve

Most of the animals went to breeders of Snohomish and Skagit counties, many of which were near the Heg farm. Kenneth Hodges purchased eight head for his herd near Everett and some went to breeders at Mt. Vernon.



George A. Gue of Yakima cried the sale and C. E. Payne of Tacoma worked the ring.

A list of the animals and their purchasers follows:

Males—Tyee Madcap Johanna, Kenneth Hodges, Everett, Wash., $210; Tyee Madcap Ormsby, Charles E. Taylor, Monroe, Wash., $180; Tyee Sir Hiske Ormsby, W. T. Fisher, Mt. Vernon, $125.

Females—Tyee Hiske Fayne, Ed Hoem, Snohomish, $400; Illustrites 2d Cornu, H. L. Thurmond, Eeast Stanwood, $130; Tyee Betsy Canary, Kenneth Hodges, Everett, $155; Cascade Gretchen, W. T. Fisher, Mt. Vernon, $120; Tyee Peggy Fayne, Kenneth Hodges, $360; Tyee May Fayne, Micle Kingland, Silvana, $185; Tyee Patricia Fayne, Dr. H. K. Stockwell, Monroe, $335; Tyee Molly Fayne, Edward Iverson, Stanwood, $100; Tyee Zella Fayne, Selmer L. Ose, McMurray, $155; Tyee Canary Johanna, Kenneth Hodges, Everett, $175; Tyee Mellie Fayne, Charles E. Taylor, Monroe, $255; Tyee Hiske Johanna, Noble Lee, Mt. Vernon, $220; Tyee Cornucopia Fayne, Carl Satra, East Stanwood, $190; Sheridan Zozo Johanna, Jake F. Jamisen, $390; Tyee Lassie Fayne, Culborn Bros., Mt. Vernon, $150; Tyee Illustrites Ormsby, Charles Nelson, Mt. Vernon, $145; Tyee Ruth Johanna, E. C. Gruthner, Stanawood, $150; Tillacum Fayne Newman, $150, and Tyee Bessie Ormsby, Kenneth Hodges, $125; Tyee Fayne Johanna, John Ellingsen, East Stanwood, $210; Tyee Pietj Ormsby, Kenneth Hodges, $75; Tyee De Pauline Fayne, Carl Satra, East Stanwood, $200; Tyee Cornucopia Ormsby, J. F. Jamisen, $150; Tyee Hiske Fayne Johanna, John Ellingsen, East Stanwood, $280; Tyee Fayne Illustrites, $150; and Tyee Patricia Ormsby, Kenneth Hodges, $190.

Make 1923 Another Banner Year for Cooperation—

A year ago, with the beginning of a new subscription season, we asked our readers throughout the state to make 1922 another banner year for our Cooperative Subscription Plan.

We said to our friends, "Send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbors the benefit of every penny saved, both in the form of a low subscription price, and by giving you a magazine of high quality in every department."

The response to this call was heard in every nook and corner of Washington; and consequently our farmers' cooperative plan has been a big winner in 1922 just as it was in previous years.

Looking forward to 1923, we are confident that our plan will gather new laurels. We believe that during the months ahead the friends of cooperation will continue their loyal support of our subscription plan, realizing that it means a better, bigger state farm magazine at a price within the reach of all. So we repeat: "Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label on your paper. If you own subscription is paid up ahead, let your friends and neighbors know about our plan. Include their orders with your own. By all pulling together, we can and will make 1923 another banner year for cooperation."

Dec. 28, 1922.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

Are We Growing Too Many Varieties of Wheat?

Elimination of Inferior Kinds Would Make Grain Farming More Profitable

By E. G. SCHAFER, Head Farm Crops Department, State College

The 54,423,000-bushel wheat crop of the state of Washington for 1921 consisted of 20 or more varieties, 13 of which produced more than 1,000,000 bushels each.

By more certain knowledge concerning the adaptation of varieties, the use of the superior ones may be extended and those which are inferior eliminated.

The extensive use of particular varieties in certain parts of the state is an indication of their suitability.

It is expected that the accompanying tables, showing the results of a recent survey will supply information concerning adaptation of varieties and show persons in need of seed of certain varieties where such seed can likely be found.

The survey which was made for 1921 shows that hybrid 128, which is a winter variety, leads all others, and that its total production was 10,065,000 bushels. This amount is 28.2 per cent of the winter wheat and 18.5 per cent of winter and spring wheat combined.

Turkey and Fortyfold, two other winter varieties, came second and third, there being 7,966,000 bushels of Turkey and 6,657,000 bushels of fortyfold.

Of the spring varieties Bluestem produced 5,778,000 bushels, Bart 5,340,000 bushels and Marquis 3,948,000 bushels.

These six varieties produced a total of 39,754,000 bushels, which is 73.0 per cent of the entire wheat crop.

Hybrid 128 is the leading wheat variety in Whitman, Walla Walla, Garfield and Columbia counties and is produced in larger quantities than any other winter variety in Lincoln county. Turkey ranks first in Douglas, Asotin, Franklin and Benton and is the most important winter variety in Adams and Kittitas counties. Hybrid 128 is grown extensively in much of the area in which Turkey predominates, while Turkey is frequently second in importance in the counties in which hybrid 128 ranks first.

Fortyfold leads both winter and spring varieties in Spokane, Klickitat, Yakima and Stevens counties. Jones' Fife is distributed quite widely in areas of light rainfall and is the leading winter wheat in Grant and Okanogan counties. Red Russian predominates in several counties west of the Cascade mountains. By far the greatest amount of this variety, however, is produced in Whitman county. Triplet is grown most extensively in Columbia, Whitman, Walla Walla and Spokane counties.

Bluestem is distributed more widely than any other variety and is grown in all counties given in the tables. It is the most extensively grown of all wheats in Lincoln county and is the leading spring wheat in Douglas, Garfield, Ferry, Okanogan and Stevens counties. Bart is commonly grown as a spring variety in areas where Turkey is grown as a winter variety. It ranks first in Adams and Grant counties, where spring varieties predominate and leads other spring varieties in Franklin and Klickitat counties.

Marquis is first in spring varieties in Spokane and Whitman counties, but does not take first place among all wheat varieties in any county of the state.

Bart is generally the most extensively grown of any of the spring varieties in areas of light rainfall.

Bluestem occupies a similar place in areas of moderate rainfall, while Marquis takes a somewhat intermediate position.

Jenkin and Dicklow are the two main spring varieties grown under irrigation. Jenkin is also grown quite extensively without irrigation in Whitman, Walla Walla and Columbia counties near the mountains.

The 1921 survey was made by means of a questionnaire sent to wheat growers of the state, information secured from county agents and grain dealers and data obtained from the bureau of agricultural economics of the United States department of agriculture. The questionnaire contained a request for the variety name, number of acres and acre yield of each variety. It was answered by 519 persons distributed widely over the wheat-growing areas of the state. The growers reporting produced a total of 3,337,188 bushels, or 6.1 per cent of the entire crop. The total amount of each variety in each county was determined by multiplying the percentage of the variety in question (computed from all the reports received) by the total production of the county, as given by the department of agriculture.

The information furnished by county agents and grain dealers was based largely upon the character of wheat entering commercial channels, but also in part upon the county agents' knowledge of grain production in the county. The estimated total yield of each variety for each county was obtained in essentially the same manner as that from the individual farmers. The results given in the tables are the averages of those secured from the 519 farmers and the county agents and grain dealers. The proportion of winter to spring varieties given in the tables does not correspond in every case with that given by the United States department of agriculture, since the separation of spring and winter wheat in the estimated yield of the United States department of agriculture is based upon time of planting, while the division of spring and winter varieties for this survey is made according to their habit of growth and winter hardiness.

It will be recognized that most of the varieties recorded in table 1 are commonly planted only in the fall and those of table 2 are commonly planted in the spring. Hybrid 123, hybrid 143, Coppei and hybrid 63 will head out when planted in the spring and are sometimes spring planted. They are fairly hardy, behave much as true winter varieties when fall planted, are most commonly grown from fall planting and are, therefore, given with the winter varieties.

Among the spring varieties Jenkin is occasionally planted in the fall, but is not sufficiently hardy to be considered a safe variety for fall planting. All varieties given in table 2 will head out and mature in an average season if spring planted. Counties producing less than 50,000 bushels are not included in the tables. The column of "Other varieties" includes varieties of minor importance, certain ones not widely distributed, and varieties for which no name was given. It includes 268,000 bushels of Martin (known also as Martin Amber), 129,420 of Red Allen, 113,323 of Little Club and smaller quantities of other varieties.

A similar survey was made for 1918 and 1919 and reported in the Washington agricultural experiment station bulletin 159 During this period the average production for the state was 32,815,019 bushels. The total of all winter varieties for this two-year period was 14,763,860 bushels and the total of the spring grown varieties was 18,051,159 bushels. The ratio of each variety to the total crop for the two surveys, as well as the expected gain or loss in 1921, is given in the following tabulation (the gain or loss is based upon the 1918-1919 variety distribution and the 1921 winter to spring ratio):

Variety.	1918-1919 Pct.	1921 Pct.	Gain or Loss Pct.
Winter.			
Hybrid 128	11.6	18.5	1.7
Turkey	7.5	14.6	3.7
Fortyfold	9.0	12.2	* .9
Jones Fife	3.1	6.0	1.5
Red Russian	6.2	3.4	*5.6
Triplet		3.0	3.0
Hybrid 123	1.8	2.8	.2
Coppei		2.1	2.1
Hybrid 143	3.4	2.0	*3.0
Hybrid 63	2.4	.8	*2.7
Total	44.9	65.4	
Spring.			
Bluestem	17.2	10.6	.2
Bart	16.6	9.8	* .2
Marquis	10.4	7.3	1.0
Jenkin	9.2	4.7	* .9
Dicklow	1.6	.9	* .1
Total	55.0	33.3	

* Loss.

The total wheat production of the state for 1921 exceeded the average of 1918 and 1919 by 21,607,981 bushels, and the proportion of winter to spring varieties, as well as the percent of different varieties is not constant from year to year.

This tabulation shows a great increase in winter wheat with a corresponding decrease in spring wheat in 1921 as compared with the former record of 1918 and 1919. The variation from year to year in spring and winter wheat makes it difficult to determine what varieties are actually becoming more popular and which are being discontinued as time goes on. A closer analysis of the percentages, however, shows that there is great unrest in the state in the choice of winter varieties, but considerable stability in the choice of spring wheats.

The greatest comparative increase has been in Turkey. Triplet and Coppei have entered the field as new varieties and hybrid 128 and Jones Fife have increased nearly 1,000,000 bushels each beyond what would have been expected, due to the increase of winter varieties. Red Russian, hybrid 143 and hybrid 63, on the other hand, are decreasing rapidly, and if this decline continues for three years more they will become as little grown as the Red Chaff and Little Club of 20 years ago. Marquis shows a distinct gain, while Jenkin shows a pronounced loss. This is the more striking on the part of Jenkin because it is often used as a winter wheat, and to that extent should have shown an increase, due to the more favorable seasonal conditions for winter wheat in 1921.

Table I.—Giving bushels harvested in each county in 1921 of the varieties of winter wheat grown in Washington.

Farm Bureau Will Answer Charges

Readers of THE FARMER will remember that the following telegram was sent November 15 to James R. Howard, then president of the American farm bureau:

"THE FARMER is publishing President Charles S. Barrett's address to annual convention of National Farmers' union and is also publishing an abstract of Secretary A. C. Davis' statement regarding farm bureau. We believe farmers are entitled to know what great farm organizations are doing and saying: Shall be glad to receive from you statement for publication regarding the questions involved."

A reply to this telegram was received from Samuel R. Guard, director of the department of information of the American Farm Bureau federation, who said:

"Your telegram to President Howard requesting statement for publication is referred to me for reply. If you will send me a copy of your issues containing Mr. Barrett's statement it is possible that we may accept your kindly proferred opportunity to set forth the farm bureau point of view."

The above letter of Mr. Guard was dated November 25. Waiting nearly a month, December 20, the following telegram was sent to Mr. Guard: "Kindly wire night letter whether or not and when we may expect statement of farm bureau viewpoint relative charges made by Barrett of farmers' union. Charges repeated by Barrett at Washington state meeting last week. Bureau members appeal to us for official reply. Anxious to give official statement early as possible."

December 24 the following telegram, dated at Chicago December 23, was received from Mr. Guard: "Will send official statement regarding Barrett charges next week."

As will be seen the earnest purpose of THE FARMER has been to give our readers the statements by those who have authority to speak regarding this matter.

A variety survey should be made for the 1922 wheat crop. This can be done in a splendid manner with the cooperation of the readers of The Washington Farmer. All wheat growers are urged to fill out the following blank form for their 1922 wheat crop and return it to The Washington Farmer, Review Building, Spokane, Washington, as early as possible. Space is provided in the blank form for three varieties, so that a full report may be given if more than one variety is grown.

Name .....

Postoffice..... County.....

Give variety name, number of bushels and number of acres of each variety of wheat grown on your farm in 1922.

Variety .....No. Bushels..... No. Acres.....

Variety.....No. Bushels..... No. Acres.....

Variety.....No. Bushels..... No. Acres.....

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Problem Is Not to Center but to Scatter Population

Interstate Commerce Commissioner J. B. Campbell came to his home town, Spokane, on official business last week and incidentally addressed the Spokane Merchants' association at its annual dinner. Newspaper reports of his speech say that he "turned farmer," urging the members to establish a closer relationship with agriculture and cooperate with farmers as the exponents of "the only basic industry."

The fact is that Mr. Campbell did not "turn farmer" for this occasion. While he is professionally a lawyer, he was a sure enough practical farmer when he was appointed to the commission. He had put his life's savings into farm property—an irrigated orchard tract in the Spokane valley and a general farm on the Little Spokane river. President Harding had promised the farm organizations that his next appointment to the commission would be a farmer or one satisfactory to the farming interests, and when farm organizations recommended Mr. Campbell his appointment followed.

In his Spokane speech Commissioner Campbell opened the basic part of his address with a reference to agriculture, declaring that there is no other industry that "creates any wealth that did not exist before."

"I warn you," he continued, "that the development of the United States is fraught with great danger unless there is prosperity for agriculture. Agriculture, as the one basic industry, could not exist without efficient transportation."

He spoke of the teeming millions of the eastern states, and pointed out that 96 per cent of all that is eaten in eastern cities is produced west of Pittsburgh. "Millions of people," he declared, "have no conception of the economies of the nation."

In view of the fact that many farm leaders and farmers are considering the repeal of the Esch-Cummins railroad law, Commissioner Campbell's views on that legislation will be of interest.

There never was, he said, a more constructive piece of legislation enacted than this, I believe. It is not perfect, because it is man-made, but the authors of the bill are as eminently versed on the subject as any men I know. But the law is based on public service and the general welfare. And I tell you it contains no more a guarantee of 6 per cent to the railways than there was a guarantee in the supreme court decision that no regulatory body can fix a rate that would confiscate property of a railroad. All the law says and all the commission has interpreted the law to mean is that the roads are entitled to 6 per cent if they can make it by fair and just rates.

Turning again to the farmer, Commissioner Campbell said:

The interest of the farmer is not in combining with the agitator, but in closely connecting up with the business man, and there is no service that you business men can give that would be greater than helping the farmer to get storage and other facilities. Storage should be supplied at home, because it would save freight rates to the farmer and save him interest on his money until he is ready to move his crops.

Our problem today is not to center, but to scatter population. One of our great troubles is to get the roads out from the cities and to take less time to move a car a mile. I don't agree with the latest report of Secretary Wallace that production must be cut. I believe that we should instead establish a higher standard of living, more capable distribution and prevent starvation running rampant anywhere in the world. By such means—humane means—will the red menace be stamped out.

When Commissioner Campbell says that "our problem today is not to center, but to scatter population," it is hoped that he expresses the opinion of the rest of the commission. Take Iowa, for illustration—one of the great agricultural states of the Union, but without a single large city. But Iowa has the compensating advantage of a number of small cities and good, prosperous towns. That helps rural development and means a better social life for the farmers. It means, too, a short haul for the farmer's product to local cities and towns, with a minimum of freight rates and the delivery, in fact, of a considerable part of the production directly by the producer to the consumer.

That is a wholesome state of affairs that we should like to see more nearly approximated out here in the Pacific northwest. There is too much congestion of population now at cities like Seattle, Portland, Tacoma and Spokane, and it would be better for the public, as Commissioner Campbell said, if we had a distribution of people.

As for Commissioner Campbell's judgment on the Esch-Cummins law, all that we can say at this time is that his views are entitled to respectful consideration. We are convinced of his sincerity and his earnest desire to help the farmers, and that spirit, plus the obvious fact that he has better sources of information and better means of observation than many who are urging the indiscriminate repeal of the law, should cause us to be careful about hasty expressions of judgment.

Let the Tap Root Do the Work

Sheep sorrel is not much good as a subsoiler. Most of us know what sheep sorrel is—one of the most contemptible weeds that grows. Its roots spread out under the surface of the ground and every few inches send up new shoots to send out more roots to send up more shoots and so on ad infinitum. Sheep sorrel is useless as a forage crop. It is just no good, that's all.

But here's another "weed" that is different. We call it sweet clover. It is a curious plant. It wants to know what is down in the depths of the earth and sends a strong root right down to find out. That is the tap root. It is the original subsoiler. It acts more slowly, but is as effective as dynamite. It has another good point. It leaves vegetable matter down there in the subsoil to be converted into humus and plant food. It opens up the way for air to circulate and for moisture to go down. And not only that, but its stems and leaves are high-class feed for cattle, sheep, hogs and so on.

If we are going to grow a "weed," let's grow one that is some good.

LOOKING INTO OTHER FARM FIELDS

A large spinach crop is being planted in southwestern Texas this fall.

* * *

A successful experiment has been made in growing sweet potatoes near Hamilton, Ontario, Canada.

* * *

Fourteen hundred head of cattle, the first of probably as many as 70,000, are being driven from the drought-stricken ranges of the southwest to northern Mexico pasture lands. Forty thousand head of cattle will be shipped or driven to the Santa Barbara ranch, owned by William Randolph Hearst, which is west of the Coralitos ranch, where the first 1400 head are consigned. The two ranches have a total pasturage of about 1,500,000 acres, but both already are partially stocked.

* * *

The cider press has come into its own again in Washington county, says the New York World. On hundreds of old farms presses have been taken from attics and storerooms, or new ones have been bought or made, and cider from Grimes Golden, Delicious, Pippins or Jonathans is constantly on tap. Many farmers are making and marketing from 200 to 500 gallons a day. Large quantities are sold for the making of cider vinegar, but many gallons are being bottled by thrifty housewives for winter use. Cider is selling for an average price of 25 cents per gallon, except when bought in barrel lots.

State Farm News

The farm bureau met at Prosser December 6 in the commercial club rooms with County Secretary Lampson and the newly elected state secretary, W. H. Talley. The principal object of the meeting was to formulate plans for a membership drive after the last of the year.

* * *

Organization of the newly elected commissioners of the port of Olympia, created at the November election, was completed recently, with Fred W. Stocking of Olympia as chairman and Perry F. Knight of Bucoda as secretary. George F. Yantis of Olympia was chosen counsel for the commission.

* * *

The Arcadia Valley Packing company of Deer Park has finished the season's pack of apples. A total of 238 cars have been loaded and shipped, and apples in storage will fill approximately 100 cars more. The total shipment this year will run about 50 cars more than last season. A considerable number of cars have been sent to Europe.

* * *

Warning to dairymen that more care must be exercised by them in the handling of milk is issued by F. O. Steward, state dairy inspector stationed in Yakima. Mr. Steward has found that many of the farmers are not complying with the requirement to cool off the milk to 60 degrees immediately and that it is often coming into Yakima warm.

* * *

A contract has been let for construction of a men's dormitory and central heating plant at Whitman college. O. D. Keen of Walla Walla was given the general contract for $61,720; G. H. Sutherland & Co., Walla Walla, the heating contract for $5900 and the Nepage McKenney company, Portland, Ore., the wiring contract for $2763. The plumbing contract will be let later.

* * *

Karl B. Musser, who formerly was dairy extension specialist in this state, and who left here to take a position as field man for the American Guernsey Cattle club in the east, corresponding to that held by E. L. Westover on the Pacific coast, has been made associate secretary of the national organization. On November 15 also, on account of the illness of William H. Caldwell, secretary and treasurer, Musser was made acting treasurer.

* * *

At a recent meeting of Trout Lake grange, near Goldendale, the following officers were elected for the coming year: Master, C. E. Hall; overseer, Mrs. Amanda Pearson; lecturer, Professor Ralph Brown; steward, F. S. Inman, assistant steward, Carl Pearson; chaplain, the Rev. E. A. Reed; treasurer, William Coate; secretary, Orin Pearson; gatekeeper, Albert Elmer; graces, Misses Eliff, Brown and Cozmoskie; lady assistant steward, Maud Pearson.

* * *

Washington State college will be asked to pay $25,200 toward the construction of the proposed sewage disposal system, says a Pullman report. This sum, or two-fifths of the cost of $63,000, was fixed by the council by resolution as the proportionate share of the new system to be borne by the college. The resolution requests early action by the college officials in appropriating the sum to enable the council to proceed with the construction of the sewage disposal system in 1923.

* * *

The lower Yakima valley peach pool has mailed final remittances to the members of the pool, the remittances being 1 cent a box, making 41 cents a box to the growers. The pool operated on a margin of 2 cents a box, 1 cent a box for loading and 1 cent for general expense, according to F. E. Thompson, chairman of the pool committee. There were 297,000 boxes in the pool and the membership included growers having from 15 boxes up to 52,000. The pool committee had 135,000 boxes between them.

* * *

Tuberculin testing in Jefferson county has been done during the last year by the county veterinarian, who tested as long as the money lasted. He never was able to reach more than two-thirds of the cattle, however, nor has accredited herd work been urged there. Several have signed up for the latter and upon the recent abolishment of the county veterinarian's office by the county court County Agent H. B. Howell determined to make an active campaign this winter for a countywide "t. b." test.

* * *

Beet contracts for next year are being circulated now by the Utah-Idaho Sugar company as a result of the successful season just completed at Toppenish. Ordinarily the company has waited until spring to make contracts for beets with the growers, but it was decided this year that to sign up earlier would prove more advantageous to growers and the factory.

Paul Kirker, agriculturist for the factory, is of the opinion that the company will sign up a much larger acreage this year than in former years. Beets have yielded well this year, generally speaking.

The guaranteed price of $6 a ton has been paid the growers, with the prospect of additional payments later, depending on the advance in the base price of sugar.

* * *

The Grays Harbor Pig company recently purchased an 80-acre farm east of Montesano and leased 380 acres, on which they placed 115 brood sows and seven boars as a foundation for their stock. They now have 350 purebred pigs.

It is the plan of the company to erect buildings on the 80-acre tract they have bought and to use the land they have leased for pasture. Water will be piped from a small lake on the higher portion of the tract. The fences and the first of the buildings are now being put in. The first unit of the farrowing house, now under construction will be 200 feet long.

There are six breeds of swine represented in the foundation stock. These are Duroc-Jerseys, Berkshires, Hampshires, Poland Chinas, Tamworths and O. I. C.s. From this it is the hope of the company, according to J. H. Kelly, manager, to build up the swine industry in Grays Harbor county to the point where it will not only supply the county with pork, but also provide some for export.

Coming Events of Interest

Jan. 3—Northwest Poultry show, Seattle.
Jan. 8—Chelan Poultry show, Wenatchee.
Jan. 15—State farm bureau meeting, Walla Walla.
Jan. 22-23—Washington wool growers, Spokane.
Jan. 22-26—Inland Poultry show, Spokane.
Jan. 24-26—National wool growers, Spokane.

FARM BUSINESS AND MARKETS OUTLOOK

The "outlook in the foretop," so far as farmers were concerned, continues to improve.

The bill providing more satisfactory production and marketing credits for farmers has made progress and the prospects of some form of government credit to foreign countries through the war finance corporation to facilitate exports of farm products are said in some quarters to be fairly bright. The latter measure is virtually a forced attempt to restore prosperity to farmers for the sake of the benefit which such prosperity would bring to the rest of the country.

The debts of allied countries to each other and to the United States, and the question of reparation payments by Germany are bones of contention abroad, but the issue must be settled before long and it is logical to believe that the settlement will result in improvement in foreign financial and political conditions as soon as the uncertainty is removed.

Exchange rates on nearly all the principal countries advanced because of financial and political developments. In the case of sterling, which rose to $4.69, the highest mark since the government props were removed from under it in March, 1919, the extreme advance to within 4 per cent of par was not fully understood. Dutch exchange also is practically at par while Swiss and Swedish moneys are at a premium. Gains were made in Italian and French exchange and even in German marks.

Domestic conditions continued favorable to higher prices for farm products.

Employment and industrial activity are well maintained. The most astute students of banking state that further development of present banking trends, such as growth of loans, broadening of discount operations with federal reserve banks, expansion in deposits and bank note issues may easily lead to "inflation."

Commodities in which speculative activity has free play responded during the week to the foregoing influences. Wheat reached the highest point since the end of last May, oats highest since the spring of 1921, corn the highest since the fall of 1920 and cotton recovered a good deal of its loss since late November.

Cattle Feeders Making Money.

Shortfeds continue to be the dominant variety in the steer market with the bulk of sales at $8 to $9.50 at Chicago. In spite of high original cost and the advance in the corn market, most of the steers being cashed have made a little money. Prices declined 25 cents to $1 last week on most of those selling above $8.50 at Chicago and better grades of butcher stock declined 50 to 75 cents recently, but the market has turned upward again. Sales above $10.50 are rare, but prime steers can still be quoted at $13.

In the last four weeks seven leading markets have received 983,000 head compared with 702,000 last year. The eight-year average is 988,000 head so that the supply has not been above normal. During this period prices have gained slightly, showing the strength of consumptive demand.

The department of agriculture estimates that the number of cattle on feed on December 1 in the 11 cornbelt states was 27 per cent larger than on December 1, 1922. The six states west of the Mississippi river show an average increase of 30 per cent while the five states east of the river only increased 20 per cent.

Hog Market Absorbs Big Run.

Receipts of hogs at the 11 leading markets in the first half of December were the heaviest for that period with three exceptions since 1905. Spring pigs are reaching market finish rapidly and average weights are the heaviest at this season in 10 years at least, while the advance in corn is stimulating producers to cut loose.

Prices have lost their recent bloom as a result of the continued heavy run, which likewise depressed values of hog products. They show resistance at the $8 level at Chicago, however, and a tendency to turn about face which indicates that further declines will not be extensive.

According to the department of agriculture the number of lambs on feed on December 1 this year was approximately 20 per cent more than last year. The corn belt has about 10 pe rcent more, Nebraska showing an increase of 25 per cent and the largest numerical increase of any state in this section. In the states comprising the western irrigated section the estimated increase is 25 per cent. The increase in Idaho is 15 per cent. In the four months, August 1 to December 1, total shipments of feeder lambs from 67 public markets were 2,768,000 head compared with 2,201,000 head last year and a six-year average of 3,301,000 head.

According to this report a rather heavy January supply is to be expected and the market may ease off slightly, especially if holiday demand has been much of a supporting factor.

Holiday Air in Horse Market.

Horse markets are far from brisk as buyers are few, a situation which usually prevails during the holidays.

Wool Quiet but Firm.

The wool market is quiet as most of the staple has left first hands, but since manufacturers and dealers have smaller stocks than usual and domestic consumption continues at a high rate, prices are holding firm. British and Australian auctions show much the same situation as a week ago with fine merinos lower and crossbreds higher than in November.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England—One-half blood, 47@48c; 3-8 blood, 48@50c; 1-4 blood, 46@47c.

Scoured basis—Territory—Fine staple, choice, $1.38@1.42; 1-2 blood combing, $1.25@1.30; 3-8 blood combing, 93c@$1.03; 1-4 blood combing, 88@92c.

Oregon—Eastern No. 1 staple, $1.30@1.33; fine and fine medium combing, $1.20@1.25; eastern clothing, $1.15@1.20; valley No. 1, $1.15@1.20.

Final Crop Estimate.

The final estimate of the winter wheat crop as issued by the department of agriculture shows an increase of 44,000,000 bushels over the preliminary report with a total crop of both winter and spring of 856,211,000 bushels. The average wheat crop in the five years, 1916 to 1920, was 799,083,000 bushels.

The corn crop was placed at 2,890,712,000 bushels against a revised yield of 3,068,569,000 bushels in 1921.

The oats crop was estimated at 1,215,496,000 bushels, against a revised yield of 1,078,341,000 bushels last year and a five-year average of 1,413,000,000 bushels.

Barley was placed at 186,110,000 bushels, against 154,946,000 bushels last year and a five-year average of 197,447,000 bushels.

The flax crop was estimated at 12,238,000 bushels, an increase of 50 per cent over last year's crop of 8,029,000 bushels.

The combined values of all the important farm crops in each of the last few years based on farm prices on December 1 were as follows:

1922	$7,572,890,000	1919	$13,820,515,000
1921	5,729,912,000	1918	12,595,901,000
1920	9,125,620,000	1917	11,595,185,000

The area planted to winter wheat in the United States is estimated by the department of agriculture at 46,069,000 acres, or 3.2 per cent less than the revised acreage for 921. The rye acreage is estimated at 5,508,000 acres compared with 6,210,000 acres planted last year, a decrease of 11.3 per cent.

The condition of the new wheat crop on December 1 was 79.5, the third lowest on record, comparing with 76 last year and a 10-year average of 87.9 per cent. The indicated crop for the entire country is 700,000,000 bushels compared with 586,000,000 bushels harvested this year.

Wheat Disappearing Rapidly.

Wheat prices advanced into new high ground for the season last week, but the market acted a little topheavy at the close. Prospects of favorable legislation was the most evident cause, although the continued rapid disappearance of the cereal furnished a solid foundation.

Since August 1 world shipments of wheat have been 256,699,000 bushels compared with 247,433,000 bushels in the same period last year.

World exports have not shown the increase anticipated in view of the known reduction in the European crop as the home grown crop was consumed early and substitutes are being used.

Corn Movement Starting.

The van of the winter corn movement is starting and prices are not advancing so readily, but consumption in all sections is enormous so that a big setback is unlikely. Receipts of oats are holding up better than usual, but demand is excellent, stocks are disappearing and prices are buoyant.

Cash Grain Markets.

The range of cash grain prices for the week ending December 20 was as follows:

Chicago—Wheat—No. 2 red, $1.37; No. 3, $1.32 1-4@1.35; No. 2 hard, $1.27@1.29; No. 3, $1.27 3-4@1.28.

Corn—No. 2 mixed, 72 3-4@76 3-4c; No. 3, 73 1-2@76c; No. 4, 72 1-2@73 1-2c; No. 2 yellow, 75 3-4@77 1-4c. No. 3, 73 1-2@76 1-4c; No. 4, 72@75 1-2c; No. 2 white, 75 3-4@77 1-4c; No. 3, 73 1-2@76 1-2c.

Oats—No. 2 white, 46 1-4@48 1-4c; No. 3, 44 1-4@46 1-4c; No. 4, 42 1-4@45 1-2c.

Rye—92 1-2c.

Barley—62@72c.

Clover Seed Highest of Season.

Clover seed prices reached the highest point of the season last week. Demand from distributors has broadened and the movement from the country is light. Timothy seed has held at about the same level for several weeks.

Chicago, per 100 pounds—Clover, $16@20; timothy, $6@6.75.

Toledo, per bushel—Clover, $13.45; timothy, $3.50@3.55.

Strength in coarse grains has helped the market for byproduct feeds.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $27.50; standard middlings, $27.50; flour middlings, $29; cottonseed meal, 36 per cent, $46.50; 43 per cent, $51; hominy feed, $30; gluten feed, $39.35; old process oil meal, $62.75; tankage, $65.

Hay Market Easy.

The hay market is unchanged to slightly lower at the principal markets.

Prices per ton in carlots—Chicago—No. 1 timothy, $20@22; No. 2, $19@20; No. 3, $14@16; No. 1 light clover mixed, $19@20; No. 1 clover mixed, $18@19; No. 1 to choice alfalfa, $24@26; upland prairie, $18@19; midland prairie, $13@15; rye straw, $13@14; oat and wheat straw, $10@13.

Egg Prices Holding.

Statistically the egg market is growing stronger. Prices are holding fairly well, but receipts of fresh eggs invariably increase in January, especially from the south, so that a downward trend may show up at any time.

Poultry prices are 25 per cent lower than three months ago, but have not reached the extreme low prices expected early in the season. Storage holdings are piling up rapidly, but are 20 per cent smaller than last year at this time.

Butter Market Holding.

Butter prices are holding fairly steady. Two cargoes containing 3433 casks of Danish butter arrived at New York during the week, in addition to more or less Canadian butter. Its influence was to check upturns rather than cause a decline. The Danish market at present is too high to favor imports.

Prices on 92-score fresh butter on December 20 were: Chicago, 53c; New York, 55c; Boston, 54 1-2c; Philadelphia, 56c.

Cheese Market Remains Firm.

Although purchases of cheese are being held down to quantities sufficient for immediate needs as is customary at this season of the year, the market remains firm.

Prices on No. 1 American cheese on December 20 were: Chicago—Flats, 27@27 1-2c; Twins, 26 1-2@27c; S. Daisies, 27@27 1-2c; D. Daisies, 27@27 1-2c; Young Americas, 27@27 1-2c; Longhorns, 27@28c; Square Prints, 27 1-2@28c.

Fruits and Vegetables.

The potato crop was increased in the government's final report to 451,185,000 bushels, making it the largest crop on record compared with 361,659,000 bushels last year and an average of 373,417,000 bushels in the five years, 1916 to 1920.

The expected advance in the potato market began to show up last week. Sacked rurals are quoted at $1.15 per 100 pounds sacked at Chicago. Russets are $1.15 to $1.25 at Chicago and $1.25 at Kansas City.

The apple crop estimate was changed but little in the final returns. The commercial crop was placed at 31,090,000 barrels against 21,557,000 barrels last year and an average of 26,779,000 barrels in the five-year period. Total shipments of apples for the season to December 18 were 76,093 cars compared with 71,870 cars a year ago. Extra fancy large to very large Jonathans are quoted at $2.25 to $2.50 per box at Chicago; Delicious of the same grade at $3 to $3.25; Rome Beauties, $2.50 to $2.75.

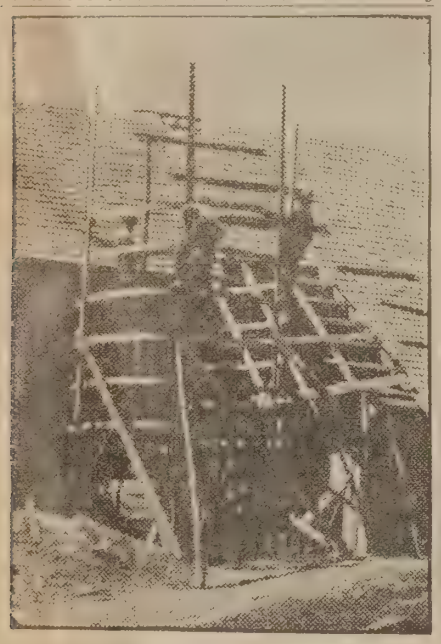
LIVESTOCK AND DAIRY

Dairymen Improve Equipment

Silos and Barns Go Up Under Guidance of College Men

By LINCOLN LOUNSBURY, Agricultural Extension Editor, State College of Washington.



The spirit of the good old barn raising day has returned under the guise of a silo building demonstration. Fred Henspeter, whose farm is situated in the Birch Bay community, near Blaine, wanted to build a silo. He did not question but what a silo was the proper equipment to have on his dairy farm, for scattered on all sides of him were prosperous farms with silos pointing their cylindrical shaped bodies toward better dairy methods.

Just what type of a silo to build and how much it would cost were the problems facing Mr. Henspeter. After a consultation with County Agent Harry B. Carroll the wooden hoop kind was chosen because of its low cost and durability. In building a wooden hoop silo no specially manufactured lumber is necessary, but stock lumber may be obtained from the local mill.

A day was set for the silo building demonstration, as in the former years the barn raising day was announced. Friends and neighbors gathered from near by and work began. It is customary for the hoops to be made before time, and in this matter R. M. Turner of the extension service showed the farmer how to construct one of the hoops and the frame work, after which he finished the balance.

It Took Two Days.

At the end of the second day's work a 10x27-foot wooden hoop silo had become a part of Mr. Henspeter's dairy equipment at a cost to him of $203.35. A summary

Erecting a wooden hoop silo.

of the material used and the cost follows: The silo required 1580 feet of 1-2x3 3-4-inch second grade flooring, costing $63. Three gallons of paint were required to cover the building, at a cost of $4.35. Wooden hoops were made of 3-8x4-inch batting, laid four-ply, which took 1700 lineal feet, costing $8. Eight dollars was spent for nails and anchor irons, while the foundation, made of concrete in the form of a seven-foot pit, cost $25. The roof and chute were made of shiplap, with roofing paper covering the top. Cost of labor on the entire job came to $80.

Forty-four Are Built.

This was only one demonstration conducted by a county agent, but 44 such silos, ranging from 10x26 to 10x34 feet in size, were constructed under the direction of the dairy specialist of the extension service during the last year. These silos were built in the 15 counties of Benton, Douglas, Grays Harbor, Kitsap, King, Lewis, Mason, Pend Oreille, Pierce, Snohomish, Stevens, Thurston, Wahkiakum, Walla Walla and Whatcom.

Another feature of the extension work over the state was the furnishing of plans and specifications for the building of seven modern dairy barns, which were built in the four counties of Cowlitz, King, Skagit and Thurston.

One of these modern barns was completed by W. J. Adiar of Tolt at a cost of $2100. This barn houses 24 head of cows and eight calves. Three box stalls were provided and the barn loft has space enough to store 84 tons of hay. The barn is one of the few up-to-date ones in that section of King county.

"Too much stress can not be placed on having good equipment for the dairy cow," says Don G. Magruder, extension dairy specialist. "One of the most important points in a suhressful dairy business is the care of the animals. The building of the 44 silos will without doubt mean a profit of $200 to the dairyman who added one to his equipment this year. This saving will be made in yeárs to come by the fine type of food which good silage makes for the dairy cow.

"Many farmers fail in the dairy business, and especially where purebred stock is used, because they have insuffi-

A modern dairy barn built under the direction of a county agent.

cient equipment to give them the proper care. The high-producing purebred cow requires better equipment than the scrub or grade."

Many Cows Are Tested.

Another phase of the dairy ertension work was the cooperation by the county agents with the state department of agriculture in securing dairymen to test 40,064 head of dairy cows for tuberculosis. This work was conducted in 21 counties. In the elimination of disease, assistance was also given 30 dairymen in the control of abortion.

Work with the junior farmer is one of the important phases of the extension program. There were 320 boy and girl dairy club members located in the counties of Benton, Clallam, Clarke, Cowlitz, Grays Harbor, King, Kitsap, Kittitas, Klickitat, Lewis, Pacific, Pend Oreille, Pierce, San Juan, Snohomish, Spokane, Thurston, Wahkaikum, Walla Walla, Whatcom and Yakima during the year.

These coming farmers were assisted in purchasing calves or cows and learning how to care for them properly. The 179 boys and girls reporting in this work made a profit of $6,714.52 from an invsetment of $33,321.55 for the year, or an average of $37.51 per member.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

SWINE DISEASES, ARTICLE V.

Internal Parasites (Continued From a Previous Issue).

The symptoms that the pigs show as a result of the worm's migration through the lungs are those of a more or less serious lung disturbance evidenced by coughing and sometimes panting and "thumping." These symptoms are most severe in animals that are less than 4 months old, as after that age the parasites do not affect them much.

There seems to be no question now but that a great many of the weak, runty pigs that refuse to thrive are the victims of the roundworms and that many of the cases of lung trouble that has been diognosed as pneumonia in the pigs of the past were the effects of the migration of the small worms when present in great numbers.

The use of drugs to kill the worms that are in the intestines causes them to expel the worms in great numbers and to contaminate the yards and hog lots to a greater extent than at present, and this makes it more dangerous for the young pigs that may be kept in these old lots. It is of doubtful value, therefore, to give the medicines unless other measures are adopted to reduce the danger to the young pigs from the old contaminated lots and houses. But if the sows that are about ready to farrow were given worm remedies and cleaned out as thoroughly as possible and then washed with soap and water until all the dirt was off the skin and then were taken to clean farrowing places, a litter of uncontaminated pigs could be grown. The pigs, however, must be taken from the farrowing place to a clean open field and kept there for at least four months, when it is quite safe to return them to the group houses. It is wise to move the pigs onto new ground and to plow up the old pens and put the ground in crop to keep the pigs away from the worm eggs, as by such a course it is possible to greatly reduce the amount of infection in the herd.

Prevent Rather Than Cure.

The above practice of keeping the pigs away from the old hog lots is advisable from the viewpoint of other diseases and it has been proven that there is less loss from other diseases when this practice has been followed, since it is known that the old hog lots are alive with contaminating bacteria that have for generations been infecting the old hog quarters. The important feature in this whole discussion is the same one that is gaining prominence in many other fields of medicine, that is, prevention is worth so much more than the cure and its application is simpler and more effective.

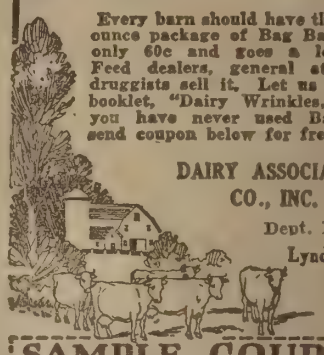
Certain worm remedies are quite efficient, but they will never solve the worm problem. Only sanitation can do that. Some remedies that have proven quite efficient are: Santonin, eight grains, and calomel, five grains, for each 100 pounds live weight of the animal, given after the pig has been fasted for 24 hours.. Or two ounces castor oil, followed by one dram of oil of chenopodium for each 100 pounds weight of animal, with the doses varied according to the weight of the animal.

While I have indicated above that after the age of 4 months there is little danger form the worms, it may not be quite right to make such an unqualified statement, but after that age the danger is very much reduced and the animals are not likely to suffer severely, though it is well to protect them by having the hog pens on as clean ground as possible, and, since the worm eggs are very hard to kill, it is desirable to be very careful with the farrowing houses to see that they are disinfected well. A solution of boiling lie water is the safest disinfectant to use, as the lie takes the dirt off very readily and the boiling water will kill the eggs. Antiseptics are not very serviceable in combatting worms, as the worm eggs are too hard to kill and will live for months in a 2 per cent solution of formaldehyde. They withstand equally well other antiseptics.

The whole problem has had to be reversed and instead of keeping the worms away from the hogs we have had to try to keep the hogs away from the worms and in this later movement we have been somewhat successful, we believe.

COWS NEED MUCH WATER.

Since milk is at least 85 per cent water, the cow must have plenty of water to drink. It should be clean and fresh, not only because that kind is more healthful, but because it induces her to drink more of it.



Don't Dally With Injured Udders

BESIDES the danger of serious permanent results, hurts or sores on the udder and teats seriously check the milk yield. The full milking comes from the cows with soft, silky udders, and smooth healthy teats.

Bag Balm, the great penetrating ointment, assures udder health. Quickly heals cuts, scratches, chaps, bruises and Caked Bag. Very valuable in treating Bunches and Cow Pox.

Every barn should have this big 16-ounce package of Bag Balm. Costs only 60c and goes a long way. Feed dealers, general stores and druggists sell it. Let us send free booklet, "Dairy Wrinkles," and if you have never used Bag Balm, send coupon below for free sample.

POULTRY AND RABBITS

Poultry Problems

By R. E. WALDO,

I would like to know if potatoes are a good feed for chickens, and if they are good, which is the best way to feed them, cooked or raw? If fed raw do they act as a green food? What vegetables are best for green feeds? I can not buy mash here. Will you give me a good formula that I can mix myself? MRS. J. E. W.

Chickens will eat potatoes readily if they are boiled and mixed into a mash with bran. However, they should be fed sparingly, for too many will cloy the system and spoil the appetite. Raw potatoes may be fed to chickens as a succulent feed, but it is hard to induce the birds to eat them.

The best available vegetable for green feed is cabbage. Other green feeds are kale, lettuce, clover, alfalfa (green and dry), lawn slippings, tender weeds and green barley cut short.

An egg mash is as follows: Mix equal parts of bran, shorts, corn meal, ground oats and meatmeal.

WATTLES TURN PALE.

My chickens and turkeys begin to get light in weight and their combs and wattles turn pale. On opening several I have found their livers large and soft and with hard white lumps on them and the intestine. Will it be safe to raise fowls on the same ground next year after killing these off? Will it be safe to raise turkeys next year from young ones raised this year on this ground? Is a house fit to put more fowls in after it is thoroughly cleaned and disinfected a week?

MRS. G. L.

The disease your chickens are affected with may be tuberculosis. However, the details are hardly sufficient to enable me to form an opinion.

If you raise fowls on the same ground next year it will be well to heavily lime the yards, plow and sow them to some crop. If your turkeys, which were raised on this ground this year, do not show similar symptoms next year I see no reason why they should not be used as breeders. The main point is to have vigorous, healthy breeding stock. If the house was thoroughly cleaned and disinfected with a good commercial stock dip it should be safe for occupancy as soon as dried out.

HOW TO TELL GANDER.

Please tell me how to tell the male goose from the female. G. A. B.

The gander (male) may be distinguished from the goose (female) in the following manner: The male is a little larger than the female and his cry is shrill while that of the female is harsh; the neck is a little longer and a little thinner in the male; the cheeks (between the eye and jaw) are less prominent but the posterior part of the upper mandible, which is generally of orange color, up to the skull, is more prominent than in the female.

NASAL ROUP.

Some of my turkeys have swollen places under their eyes, between the eye and nostrils. The nostrils get stuffed with a white looking stuff. After they have had this a while they seem to get blind in the eye that is afflicted. They eat well and do not sem to be sick any other way. I feed wheat and corn and have been feeding heavy to fatten them. Will they be fit for breeding purposes? What is the trouble and a remedy?

MRS. F. E. M.

Your turkeys no doubt have what is known as nasal roup or contagious catarrh.

If possible, isolate all sick birds from the healthy flock. Disinfect the yards and houses with a strong solution of some commercial stock dip. A 5 per cent solution of carbolic acid is good also. Burn or bury deep all birds that die. Place one 7.3 grain mercury bichloride tablet in a gallon of water in a nonmetal container. Do not use this treatment more than 10 days at a time. Kill all sick birds that continue to get worse.

If your turkeys get well and are in good condition as to flesh and vigor by the breeding season, I see no reason why they could not be used as breeders.

May Be Tuberculosis

By W. D. BUCHANAN.
Specialist, Washington State College.

Would you please tell me what is wrong with my chickens? I have lost a number of hens. Upon examination I find their livers enlarged, with white spots all over them and also their intestines. They get lame in one leg and have a yellowish dropping.

MRS. W. D.

If you have accurately described the condition of your hens I would say that they are dying with tuberculosis. If so, there is nothing can be done for them except to kill and burn them. If, in addition to the symptoms which you describe, the hens are light and thin on the breastbone, there is no doubt that this is the trouble. If your flock is small I would advise you to kill and burn all sickly birds and market all apparently well birds. Clean and thoroughly disinfect all poultry houses, scrape all filth from the ground immediately around the houses, give the soil a good coat of air-slaked lime or quick lime if you can get it finely ground. Then stay out of the chicken business for a year, or start new flock in new houses on new ground.

May Be Tumor

By W. T. JOHNSON, Veterinarian Western Washington Experiment Station.

Upon killing one of my 5-month-old roosters I found the intestines surrounded with brown water and a large, round growth that seemed to be hard in places and full of the brown water. This seemed to grow to the back. The liver and other intestines looked healthy and all right. The flesh was tightly drawn over the bones. Can you tell me what it was? The chickens have free range with plenty of green feed. They also are fed cracked wheat and corn, also sour milk.

MRS. N. M. O.

The condition which you found in this rooster is very likely a tumor with cyst formation associated with it. This is a condition which we find only occasionally, since it is not due to infection. I would suggest that you pay no particular attention to this trouble, as I think you will find it will not cause you any further losses.

POULTRY FARMS UP TO DATE.

Three Camas county farmers now are carrying on demonstration work in poultry management, feeding, housing and general care, in cooperation with the university extension service.

GET READY FOR HATCHING TIME.

W. D. Buchanan, specialist in poultry, says: Increase the ventilation in the incubator room and see that incubators of the hot water type are not allowed to freeze. The details will help the spring hatch.

BABY CHICKS

Strong, vigorous and full of "pep" are hatched in our PETALUMA ELECTRIC and HOT WATER INCUBATORS. They are easier to raise because healthier and hardier. Petaluma incubators make bigger hatches of larger and better chicks than any other incubators in the world. Petaluma electric and hot water brooders are world beaters for raising chicks. They grow faster, stronger and more vigorous than by any other plan. Our brooders give them "pep." Write for FREE Booklet A5. Petaluma Electric Incubator Co. Petaluma, Cal.

Stop Hatching Weak Chicks

With Cheap Incubators

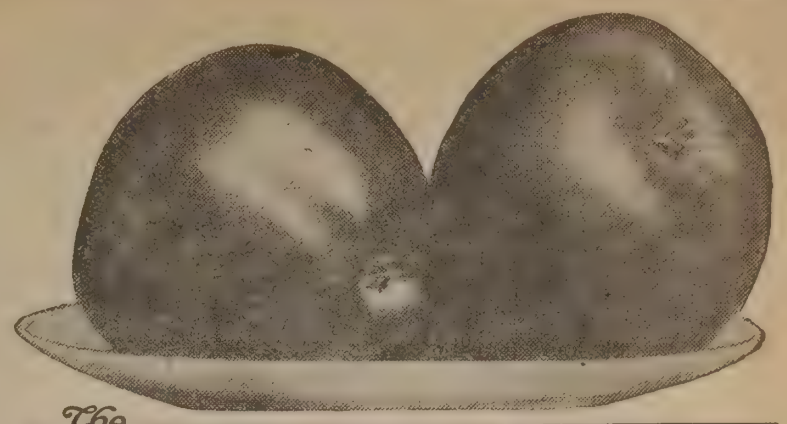
It's a shame to waste your time and eggs hatching weak, wobbly chicks in cheap incubators, when everyone knows that

Queen Incubators

Hatch Strong, Healthy Chicks—That Live and Grow!

A good incubator is the start to profitable poultry production—it's the cheapest thing you can buy.

One dealer who has sold Queen machines for 9 years says: "I can get hundreds of testimonials of stronger chicks and almost perfect hatches with the Queen."



You, too, will hatch better chicks with a Queen Incubator and raise more of them with the Queen Brooder. Ask about the remarkable Queen Brooder Stove. If your dealer doesn't sell Queens, write us. Catalog free. (54)

The Rainier Apple

The Apple to Plant for Profit

Awarded Wilder Silver Medal 1922 American Pomological Society

In our sincere judgment this is the finest dessert apple thus far developed. It has all the mild qualities of the Delicious, which commends it to the taste of those who cannot eat the more acid apples, and, in addition, it has a decidedly spicy flavor, will keep firm in ordinary storage for weeks without becoming mealy, and in cold storage the RAINIER keeps perfectly for a year.

UNCLE SAM'S VERDICT—"The keeping qualities of the RAINIER APPLE are unsurpassed by those of any other variety of the Pacific Northwest that has yet come to the attention of the U. S. Deparment of Agriculture. Its ability to retain its firmness, brightness and quality with almost no decay or skin blemish, places it above even the Arkansas Black, Winesap and Yellow Newtown. In 32 degrees Fahr. cold storage it keeps in prime condition into May or later, and instances are known where large numbers of boxes have been held in excellent condition into September of the following year."—Bulletin No. 587, United States Department of Agriculture, Page 28.

Eat a RAINIER

—Send us your name and address and we will mail you one FREE.

We offer first class RAINIER trees for spring planting. Also other standard apples, peaches, pears, plums, prunes, apricots, etc., small fruits, shade trees, shrubbery and roses.

ORCHARD AND GARDEN

Mushroom Fungus

Attacks Evergreen Blackberries

The mushroom rot fungus is causing trouble with the Evergreen blackberries in western Washington, according to Arthur Frank, plant pathologist of the western Washington experiment station at Puyallup. This fungus ordinarily works in old stumps, old wood such as berry posts, telephone poles and other wood that must remain in the ground from year to year.

When an old log or stump, or where branches of old wood are in the ground and the roots of a living plant come near it, the fungus is prone to attack the living plant and become a parasite upon it. The presence of the fungus can be told both by the effects of the parts of the plant above ground and by finding the fungus itself on the parts of the plant below ground. The pest attacks, besides the Evergreen, almost any kind of fruit bush or tree, being common on the raspberry, loganberry, cherry, apple, pear, etc., and is sometimes found on potatoes when they are planted on newly-cleared land.

When the disease attacks a plant early in the fall there is a distinct coloration of the foliage which is left and any new canes may be poor and straggly, the whole plant showing an unthrifty condition. By digging up the plant and carefully searching, the fungus itself may be found. This appears as purplish red or black strands which look much like roots, but are not. These entwine about the roots or the crown and fasten to them. This rhizomorph, as it is called, is simply a mass of the threads of the fungus with the black covering upon it. The strands where the rhizomorph fastens to the bark grow out and enter through the bark and can be seen white just under the bark. These strands cause the wood to decay and the part attached to die.

Plants that are found to be affected should be dug out and burned. The earth from beneath and around the plant for a distance of about two feet must be taken out and destroyed. If any of this dirt is scattered it will spread the fungus. Pick out from the dirt about the hole any of the strands that can be seen. Replace with clean dirt from some other part of the field in which the trouble is not growing and replant.

There is no treatment known of the earth or the plants that will prevent the growth of this fungus.

YORK GETS BACK INTO THE GAME.

George W. York, for many years in the bee and honey publishing business, but for several years lately a dairyman, beekeeper and dealer, has yielded to the never-ending urge of the publishing profession and gone back into the game. Mr. York is well known among bee keepers of the northwest and of the United States as a whole. For years he was editor of the American Bee Journal. During recent years he has written for other publications, notably THE FARMER, on bee and honey subjects. Now, however, he has taken over Bees and Honey, which is nearing the end of its fourth year, and will publish it monthly in Spokane, Wash., under the name of York's Bees and Honey. This publication begins its fourth volume January 1.

GENERAL ADVERTISING.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

SILOS TANKS—LUMBER

Write for our new book "Making Silage" and learn the truth about silos and silage.

NATIONAL TANK & PIPE COMPANY 154 Col. Blvd., Portland, Ore.

First Crop Berries

A crop of Texas blackberries on the Cogswell & Sellers fruit farm at Monroe produced 10 1-2 tons of berries last year. The patch consisted of only 2 1-2 acres and the vines were producing their first crop. This blackberry comes at a time when there is no other fruit in season, when the raspberry crop has been harvested and just before the regular crop comes on. The fruit is larger and sweeter than any of the other varieties of blackberries, and it has taken well on the general markets and at the canneries.

There are 10 acres of all kinds of small fruits on this farm as well as a commercial flock of White Leghorns. The hen house litter is used on practically all the berry crops and some very good crops have been recorded. Last year a production of 3 1-2 tons of rhubarb was harvested from a small patch 35 yards square. One stock is said to have measured four feet in length. The patch is in its second year of bearing.

"We keep an account book and put down everything bought or sold from the farm," said Mr. Cogswell, "in fact we can tell exactly what we sold for any season during the last five years. We feel that this pays, since we can almost tell exactly where we are and estimate about what it will cost us to operate during the next season.

"Although we have some henhouse litter, there are some fields upon which we depend on cover crops to furnish the humus and fertility. Such a practice does not hinder cultivation of the following crop if the cover crop is turned under early enough and disced in well.

"We make it a plan to study all the bulletins that we can get hold of, both on fruit growing and poultry production. We get the bimonthly bulletin from the experiment station and keep it on file for future references. We also make use of other bulletins from different sources and find it a valuable source of information."

Cherries and Gooseberries

Cherries promise to be one of the most promising fruit crops on the J. W. Peterson farm near Edgewood. He has put out 30 young Montmorency trees, which are now two years old, and are making an excellent growth. There were a few cherries on the trees last year, and it is probable that a light crop will be harvested next season. In addition, Mr. Peterson has 200 Oregon Champion gooseberries, which will also be raised as a cannery crop. The crop needs very little attention aside from cultivation, as compared to other heavy crops, and there is always a demand for gooseberries as a fresh crop as well as for canning.

Although Mr. Peterson's farm is on the upland, he has been very successful in withholding the moisture during the summer months by thorough cultivation. The entire field is treated with barnyard manure in the spring before the land is plowed.

Keep the Bees Warm

"If bees are kept warm they will not need so much feed during the winter," is the assertion made by W. L. Cox of Elma, who has tried out several methods of packing the hives. "One of the best and cheapest methods of packing is to use tar-paper tacked to the outside and making a cover of the same material to fit over the top as a waterproof protection. There are some that advocate packing the top super with moss to keep out the cold, but I have not found this absolutely necessary. If moss is used it should be dry. Clover chaff could be used in its place."

Snohomish Beekeepers

A number of beekeepers of Snohomish county met recently at Everett and organized the Snohomish County Bee association, with the assistance of A. B. Slocum, bee specialist of the state college. There were but 12 members to start with, but the association expects to have 50 before this time next year. A live program has been arranged for next year and there are hopes for some boys and girls' clubs. Officers of the new organization are: Phillip Hingston, president; A. J. Cogswell, vice president, and C. H. Junge, secretary-treasurer.

HAS NEVER BEEN BEATEN.

Some 16-year-old Clarigeau pear trees in the C. E. Fitzgerald orchard at Ferndale produced 23 boxes of pears to the tree. Pears from this tree have taken first prize for best box of pears for five years, fact, have never been beaten, according to exhibits being open to the world, and, in Mr. Fitzgerald.

LET WINTER KILL THE PESTS.

Winter will destroy many of the garden pests if you will but plow or spade up the soil this winter. Many pests spend the winter in the soil in one form or another. Expose them to old King Boreas.

A TREMENDOUS CROP.

The potato crop of the world is about 5,000,000,000 bushels, of which the United States produces less than one-tenth.

$2000 FOR FIVE HENS—A RECORD PRICE for record hens. We announce the purchase of F. E. Gilbert's winning pen of White Leghorns at the recent Puyallup egg laying contest. These five birds laid 1421 eggs in 12 months, thus establishing a new world's record. These birds are to be mated with the best cockerel to be obtained and used in building up Queen Quality strain of chicks. We have also contracted with Mr. Gilbert for the eggs from the pen sisters of these wonderful birds. We will have a limited number of chicks and eggs from them for sale this season. The greater part of them will be used for our own use. In addition to the Gilbert birds, we will have many flocks direct from Hollywood and Tancred stock. We also hatch R. I. Red and Barred Rock chicks of exceptional quality. We are now booking orders for early delivery and have sufficient capacity to assure prompt delivery at time promised. Incubators, 15 per cent off. We offer a special discount of 15 per cent on Queen incubators purchased from us during November and December. In addition to the Queen, we carry the Master's incubator. Petaluma electric incubator, Blue Flame brooders, American brooder stove and are agents for the Kresky brooder stove. Write for our new catalog. Queen Hatchery, 87 Sewart st. Seattle Wash. Ell. 2054.

PIKE'S PEAK OR BUST

By LEWIS B MILLER

Copyright 1921

CHAPTER TWENTY-SEVEN (Continued).

Before the hunters had been out long, those waiting at camp began to hear reports of guns. When the party returned at dusk they brought no large game except one deer. Cooper had killed that. But each of the others was carrying some. One had a rabbit, another some phesants, and the third three squirrels, the black, or brown, squirrels found in these mountains.

On this game the whole party feasted well. They were still weary, and not long after supper they were in their blankets and asleep by their campfire. All but one. Not knowing what had become of those trailing Utes, the white men did not think it prudent for all to sleep at once.

Orlando had the first watch. When his period was up he went to sleep, but not till after he had called out Jeff Givens. And so they kept on, one man watching and five men sleeping, till morning dawned. But the night had passed peacefully enough.

"I'm guessing we shook off our red pursuers in that black snowstorm," Sanders remarked, while the party were at breakfast. "Of course they couldn't track us in the dark. And all that falling snow we groped our way through must have covered our trail so that even a bloodhound couldn't nose it out."

"Chances air the redskin gang turned back when they struck the snow cap," was Esau's opinion.

"I'm rather of the same opinion," agreed Cooper. "Still, as you've heard me say before, it's little short of recklessness to take that for granted. They may have struck back toward home when they came to the snow. Or they may be on this side of the range, trying to pick up our trail or spy out our camp. It's folly to feel safe when we may be surrounded by danger."

The night had been chilly, almost raw. But when the sun rose above the forest, the air soon became pleasant. Now, while most of the party remained at camp to guard it and rest, two of their number, Holloway and Cooper, set out together in quest of more game. They were not seen again till long past noon. But, when they did return they had killed plenty of meat. They were carrying an elk on a pole, and after that they went back and brought a mountain shep to camp. On those the whole party feasted royally at supper time.

Again, during another night, the six adventurers took turns at standing guard from bedtime till dawn. But when this second night, too, had passed without disturbance, they dismissed their previous fears as groundless. There seemed no reason to believe that the Utes had followed them across the Great Divide.

Still the party remained in camp at the foot of that mighty rock. After their frightful exertions, all felt the need of a good rest. And there was an overabundance of game here for themselves and Frisk, and an abundance of grass for Brindle. So they lingered day after day.

Part of this delay was due to indecision as to what to do next. Naturally, for many reasons, all would have been glad to return to where they had unearthed that pot of gold. But, with thousands of hostile redskins so close by, such a thing was out of the question. Indeed, after their narrow escape and flight for life, not one of them had, just now at least, any serious thought of crossing the Great Divide again.

"But there's just as apt to be gold east of the snowy range as west of it," Cooper told his partners one night, as they all sat by their campfire. "So, to my way of thinking, we can just as well do some prospecting on this side."

"And in the neighborhood of this camp is as good a place to prospect as any, it seems to me," Givens said. "We're just as apt to strike pay dirt here as anywhere else I know of."

On that point all the party were of the same opinion. Next morning, leaving two of their number to guard the camp, the other four wandered out with picks and shovels and pans and guns, to see what they could find. Late in the afternoon they returned, one of them carrying a beaver he had shot. They ahd discovered a beaver dam, and had used their pans in many places along a stream, but without washing out more than a slight trace of gold—the "color of gold" they called it.

Next morning five of them went prospecting, only one man remaining to guard the camp. But no worth-while discoveries were made. On the third morning Sanders was left in charge of the camp, all the others setting off on a hunt for gold. The prospectors soon divided, two going in one direction and three in another.

They were carrying no dinner, and about 2 o'clock the party of three, having found nothing to encourage them, returned to camp for something to eat. To their surprise, they found the camp deserted.

"Well now, what has become of Abe, I wonder!" Cooper exclaimed. "This is no way to guard a camp with a pot of gold in it!"

"Oh, he's somewhere close by. You can be sure of that," answered Orlando.

CHAPTER TWENTY-EIGHT.

"Yes, he'll be showing up in a few minutes, I'd guess," was Holloway's opinion. "I only wish he'd had some grub cooked and waiting. A fellow never feels much like cooking after he's been tramping over this rough, wild country most of the day."

Weary, the three prospectors threw themselves on the grass to rest and talk over their experiences. They were also waiting for Sanders to return and bake some bread.

But half an hour passed, and still the vanished campkeeper had not appeared.

"Well, to me this looks—is beginning to look a little bit strange," Cooper finally said. "What can have become of that man?" He glanced toward the packsaddle, and those two rawhide pockets leaning against it.

Interpreting that glance, Orlando sprang up from where he was lying and hurried to the saddle. First he looked into one of the big pockets and then into the other. After that the two spectators were surprised to see him hastily taking all the things out of one pocket.

"What's up now, Lando? What are you rummaging for?" called out Holloway.

At first the young fellow did not answer. But soon he ceased searching, straightened up and turned a dismayed face toward the two men.

"Why, the—the pot—our pot of gold! It's gone!" The concluding words were almost gasped out.

"Oh, I reckon not! You must be mistaken, Lando," Cooper assured him. "In fact, you're bound to be mistaken."

"Hope I am. Don't see how I can be, though. But I'll look again."

At once the others sprang up and joined him, and all three took part in the search. When it was ended, they had to admit that the pot—that precious pot of theirs which meant so much to them—was nowhere in the camp. Now they stood staring at one another, blank dismay, mingled with amazement, written on their faces.

While the three men were standing thus, Jeff Givens and Esau Haggerty entered the camp. Seeing that something was wrong, they made haste to join the others.

"Our pot's gone! Our pot of gold!" Orlando blurted out, while the newcomers were still approaching.

"Oh, you must be mistaken!" exclaimed Esau. "Where—where's Abe Sanders?"

"That we don't know. And that's the strangest part of it," Cooper replied. "When we got back to camp he was gone. Nearly an hour we waited for 'im; and then something put it into Lando's head to step over and look for our treasure pot. Since then ke've all searched high and low for it, but only to convince ourselves that that pot is not in this camp."

"Then what do you think has gone with it? Do you suspicion something crooked about the way it walked off?" demanded Givens.

"We don't know what to think, Jeff. Haven't had time to do much thinking, in fact. But to me everything looks—is beginning to look very, very suspicious."

"Oh now, I don't believe there's anything crooked about Abe. That cain't be true,' declared Esau, with some warmth.

"I don't like to believe such a thing of our partner. But what else is there to believe? We left him to look after the camp, and now we've come back to find him missing and the pot of gold missing. What can we think of but that the two left camp together."

Not till they had made another and more thorough search, all of them joining in, did Sanders' five partners admit they had been robbed, and that the man they had left to guard their camp must have been the robber.

"Gold—yaller gold, is a mighty temptin thing to most men," Esau observed. "And of course, five or six thousand dollars is ever so much bigger than one-sixth of five or six thousand dollars. But who—who under the canopy would ha' believed that Abe Sanders was that kind of a rogue?"

At first, after the five gold seekers had assured themselves that their sixth partner and their pot of gold were both missing, and had doubtless left camp together, there were surprise and dismay, and even consternation, among them. Later, when they had had time to reflect on all that the loss meant to them, and on how their confidence had been betrayed, most of them became angry.

After reflecting, however, Holloway was disposed to hold a different opinion: "Boys, I can't believe that of Abe. The fellow has always seemed to me as honest as the day is long. I don't half-way believe he'd up and play that kind of a dirty, devilish trick on his own partners."

"But the gold is gone, and the man we left to guard it is gone. How can you explain the matter except by saying that the two left camp together, Jess?" demanded Cooper, a trifle impatiently.

"Well, I can think of a way it might be. Sanders might have found it necessary to leave the camp for some reason. And, for fear the gold would be stolen while he was gone, he might have taken the pot out of the pack and hid it somewhere. In the grass or among the bushes, or under a rock or a log, maybe. That's what I'd have done in his place."

Cooper considered. "Yes, such a thing could have been, I suppose. And you may be sure I'd far rather believe that than something worse. But, if what you suggest really happened, why hasn't Sanders returned to camp before now?"

"Not knowing what took him away, of course I can't say just what keeps him from coming back."

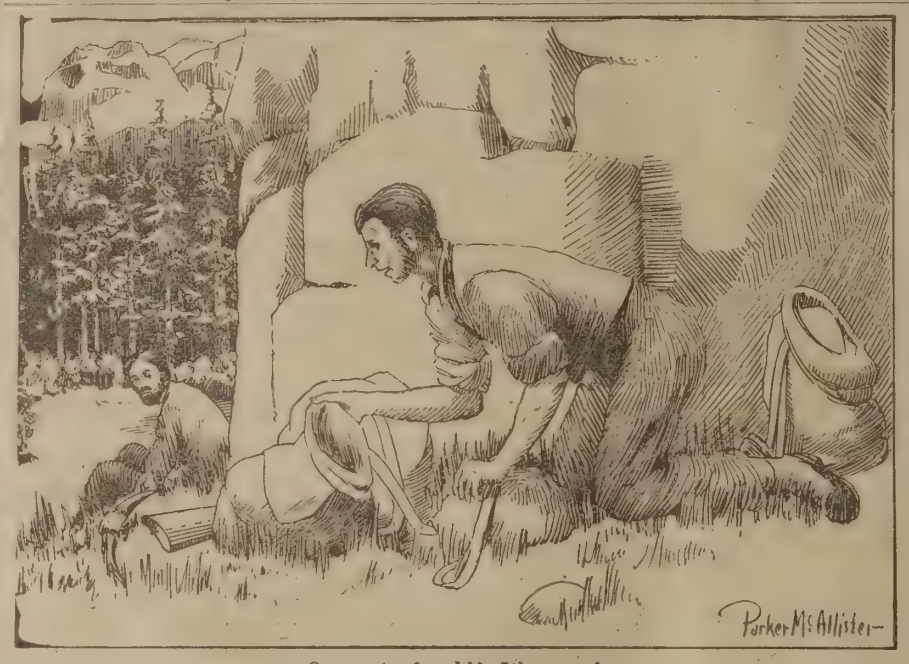
"Well, I'm pretty sure I know. I hate to believe I've had a partner that would play us such a scaly trick. But to me the evidence is too strong—too strong to be doubted. While we're standing here jawing about the matter, our gold pot and our brass partner are both making for Denver as fast as a pair of guilty legs can pack 'em."

"Seems to me we ought to learn something by looking about us," Orlando was now prompted to suggest. "Not once have we thought to see whether Sanders' pack is missing."

"Why should he take his own pack when he could just as well sneak off with what he wanted from all the packs?" burst out Givens, hotly.

It soon developed that Holloway's pack was missing, though most of his things had been left. At this the angry gold seekers began to talk of what would happen when their treacherous partner should be captured.

"Now, boys, first thing on docket, we must get on that scoundrel's trail," Cooper told his partners.



But Holloway said: "That will be hard, after all the tramping we've done around here. And trailing is slow work, even at best. Abe has struck out for Denver, or somewhere in that direction, I'm guessing. Gold's no better than stones out here in this wilderness. When a man gets a lot of that stuff he makes a bee line for some place where he can spend it."

"Of course he'll do that sooner or later, Jess," Cooper answered. "But Sanders is nobody's fool. Unless he's taken final leave of his senses he knows we'll soon be after him. And we can travel faster than he can with all those other things and that 30-pound pot besides. So, in my opinion, he's more apt to strike off into the mountains and hide somewhere till we've worn ourselves out hunting for 'em. After that he'll make for civilization, with his ill-gotten gold and his rotten conscience. The very fact that he carried so much of our flour with 'im seems to me to indicate that he has in mind to say in hiding for a while."

Now Givens spoke: "It looks that way. But I've heard that a man with something crooked on his conscience can't hide away by himself. His conscience gives him so much trouble that he cain't bear to be left alone with it."

"I'm guessin' that ain't a thousand miles from right," remarked Esau. Cooper answered: "Of course a guilty conscience is wretched company. But a fellow who got his own consent to be a thief and a traitor can stand a lot. I still think we'd better make an effort to pick up that rogue's trail before we try to follow 'im. We want

(Continued on page fourteen.)

Our pot of gold! It's gone!

Bits of Fun for Everyone

Enough to Do Some Good.

It was the morning of the new pastor's first sermon, and he was most anxious to make a good impression. As he was rather a vain young man he turned to the old verger and whispered: "Could you get me a glass? A small one will do." The verger hurriedly departed, but soon returned with something under his coat. "I know what it is to be nervous," he said kindly. "I've brought you a whole bottle." The pastor blushed and gasped, for he was not a drinking man. "Bu—but——" he began. "Ssh!" said the verger. "I'd never have got it if I hadn't said it was for you."—The Argonaut (San Francisco).

The First Row.

The editor and his bride went to a summer resort to spend their honeymoon. As soon as they arrived they took a boat and went up the shore and back. The following morning the bride's mother got a postcard which read. "Arrived safely. Grand row before supper."

She read it and sighed. "My!" she muttered. "I don't think they'd begin to quarrel so soon."—Exchange.

Whom Did He Pluck.

Millionaire (speaking to a body of students)—"All my success, all my tremendous financial prestige I owe to one thing alone—pluck, pluck, pluck."

Student—"But how are we to find the right people to pluck?"—Dinuba (Cal.) Sentinel.

A Slight Error.

Flattenflat has arrived home late from the office, and his wife was not the sort of woman to let a thing like that pass unnoticed.

"Why didn't you catch the 7:30 train home tonight, Herbert." she demanded.

"Well, you see, dear," replied Herbert, "I asked a porter from which latform my train started, and he said if I turned to the left I'd be right."

"Well, didn't you?"

"Unfortunately, no, my dear!" replied her husband. "A little mistake on my part. I turned to the right, and was left."—Exchange.

Persisted in His Art.

In a southern city a Shakespeare club occasionally gives performances notable for the local prominence of the actors. In one play a social celebrity had only four words to say, "The queen has swooned." As he stepped forward his friends applauded vociferously. Bowing his thanks, he said, in a loud voice, "The swoon has queened."

There was a roar of laughter, but he waited patiently, and made another attempt:

"The sween has quooned."

Again the walls trembled, but the ambitious amateur refused to surrender. In final desperation he roared, "The quoon has sweened."—Copper's Farmer.

Couldn't Hear the Conversation.

Some time ago I took an old colored man to the picture show for the first time. When he came out I said:

"Well, uncle, did you enjoy the picture?"

"Oh, yes," he said. "the picture was all right, but the piano made so much noise I couldn't hear a word they said."—Charlotte Observer.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Family Circle: Another new year is before us and again we are permitted to clear off the slate and start over again. I like all these new times, like new days and weeks, months, and especially new years. Don't you?

It gives us a chance to try again and all of us, old and young, need new chances, I think, for, try as we will, we make mistakes.

I have said in other messages to you that I consider thinking a very profitable occupation, so let us sit down together and do a little thinking in preparation of the year ahead of us.

Let us think back a little, just long enough to recall some of our mistakes, and look at them just long enough to see why we made them, so as to avoid making them again. But let us not waste time in idle regrets.

Here are a few things we can resolve to do:

Be slow to criticize and swift to praise, remembering our own shortcomings.

Be ready to enter into the emotions of our friends and dear ones. If they are happy rejoice with them, and if sad be ready with our sympathy.

This is one of the new commandments which Jesus gave from the Mount of Olives: "Rejoice with those who do rejoice and weep with those who weep."

Let us cultivate patience during this coming year. It is so easy to lose our patience and speak the hasty words which we really do not mean, but which stir up contention. Let us consider well the worth-while things and take time to decide whether the offense we are scolding about is really meant to be one, or is it because we have allowed our nerves to become raw and we are making much out of little.

And let us have an ideal toward which to work. What is an ideal? The dictionary says it is "Something existing in the imagination only, conforming to a standard of perfection."

I contend that most failures are traceable to a lack of imagination, or, in other words, to a lack of an ideal. One can have ideals about the small and common affairs of life, such as sweeping the floor and washing dishes. And if one sets a high standard to work up to in small things which are of daily occurrence, the habit will form unconsciously of doing one's best in everything performed.

Let us take the humble task of washing dishes which occurs three times daily in every home in the land. Surely if there is any poetry or pleasure to be found in the task we should find it, and there surely is.

Washing dishes can be a work of art or it can be, and too often is, a very greasy, messy, hateful job. Since it must be done, why not make it a delight.

To begin at the beginning, the very beginning, bring to your mind a picture of the completed task. See all those pots and pans, sticky and greasy, and all the dishes the same way, all clean and shining and in their proper places. See them in imagination that way, then set about to make the picture real.

To start, have a great plenty of very hot water, soap or soap powder, a good clean, soft dishcloth and nice, white ,clean dishtowels. And, whatever else you go without, have two good-sized dishpans and a roomy place to work on. Take from the table all food and the dishes which do not have to be washed every time, leaving nothing but the soiled dishes. Next, with a very limber knife or, better yet, a spatula, which you can buy at a 10-cent store, scrape all the plates and other dishes which need it and stack them according to size. Set them on the table or shelf where they are to be washed, in the order in which they should be washed, that is, the glasses first hand, then the silver, then cups and saucers and so on according to the soiled condition; a third pan is a help and into this I put a folded cloth and as I wash I rinse the dishes in the second pan of very hot water, then turn them in the third pan and very often by the time all are washed those in the third pan are only needing a touch of the dishtowel.

As you wipe stack them as you will put them away on the shelves, and before you know it you will have a row of shining dishes where all the mess was a short time ago. If you get into the spirit of this working toward an ideal, dear friends, you will soon find there is more joy in the drudgery than you dreamed there could be.

Apply this to all other tasks and see if you do not find a new joy in life. I chose this humble bit of household drudgery because whatever else one can pass by, the dishwashing must be done.

Perhaps this will seem a strange New Year message, but if I can in some way get to you what a valuable thing an ideal is I shall have accomplished what I have endeavored to do.

I wish for you a happy and prosperous year. I hope not a day will pass that shall not bring its joy.

"Count that day lost whose low descending sun
Looks not upon some worthy action done."

Sincerely your friend,
ALICE W. BARLAND.

Family Circle Girls

Dear Mrs. Barland: I have been reading the letters from the Family Circle girls and enjoy them very much. There is one class of girls who never write and I would very much like to hear from them. They are the ones who work out at common housework. Why should girls who do this kind of work receive the least pay and why should they be looked down upon or be considered beneath girls who do public work? I know they are, for I am 26 years old and have worked in a number of different places and I know whereof I speak.

There is much more satisfaction in working a certain number of hours at some special work and then being free to go or do whatever one likes. This is much pleasanter than to have to work from the time one gets up in the morning until she goes to bed at night, without one minute to call her own. I think every girl doing housework in a private home

(Continued on page thirteen.)

An Allover Lace Doily

By JEANETTE BELL.

Each crochet worker has her preference of the size thread she likes to use. In making this allover lace doily any size thread may be used. Naturally the size thread will govern the size of the finished piece. The model was made of No. 30 cordonnet crochet cotton. Finer or coarser threads could be selected. Make 5 ch sts, join, forming a circle.

First row: 10 s c into circle.

Second row: * 1 s c into first st, 2 s c into next st, repeat * (all the s c are made by taking up the back half of each st only; this will not be repeated again, but will be understood).

Third row: * 1 s c into each of first 2 sts, 2 s c into next st, repeat *, for this row.

Fourth row: * 1 s c into each of first 3 sts, 2 s c into next st, repeat *, for this row.

Fifth row: 1 s c into each st.

Sixth row: * 1 s c into first st, 2 s c into next st, repeat *.

Seventh row: * 1 s c into each of first 2 sts, 2 s c into next st.

Eighth row: 1 s c into each st.

Ninth row: * 1 d c, 2 ch sts, skip 1 st, repeat *, for this row.

Tenth row: * 1 s c into each st, repeat *, 5 times, increasing as needed to make the work lie flat, the larger the circle the less extra stitches are needed to produce the curved line.

Sixteenth row: 2 ch sts, 1 d c, * 3 ch sts, skip 2 sts, 1 s c, 3 ch sts, skip 2 sts, 3 d c, repeat *, for this row.

Seventeenth row: 2 s c, * 5 ch sts, 1 s c into each d c, repeat *.

Eighteenth row: * 1 s c into each st, repeat *, 5 times.

Twenty-fourth row: * 1 d c, 2 ch sts, skip 2 sts, repeat *.

Twenty-fifth row: * 1 s c into each st, repeat *, twice, increasing as needed to make the work lie flat.

Twenty-eighth row: * 2 s c, 3 ch sts, skip 3 sts, 4 d c, into next st, 3 ch sts, skip 3 sts, repeat *.

Twenty-ninth row: * 1 s c over each d c, 7 ch sts, repeat *.

Thirtieth row: * 2 s c over center 2 s c of previous row, 4 ch sts, 4 d c into center st of ch of previous row, 4 ch sts, repeat *.

Thirty-first row: * 4 s c into d c, 9 ch sts, repeat *.

Thirty-second row: * 2 s c, 5 ch sts, 4 d c into center ch st of previous row, 5 ch sts, repeat *.

Thirty-third row: * 4 s c, 8 ch sts, repeat *.

Thirty-fourth row: * 1 s c into each st, repeat *, twice, increasing as needed.

Thirty-seventh row: * 1 d c, 2 ch sts, skip 1 st, repeat *.

Thirty-eighth row: * 1 s c into each st, repeat *, for the next row.

Fortieth row: * 1 s c, 1 ch st, repeat *, 5 times, 15 d c, 1 ch st, repeat from first star, *, for this row.

Forty-first row: * 1 s c, 1 ch st, over each ch st, making 6 s c, 3 ch sts, skip 3 d c, 2 d c, 2 ch sts, 2 d c all between next d c, skip 3 d c, 3 t c, 3 ch sts, 3 t c, all between the next d c, skip 3 d c, 2 d c, 2 ch sts, 2 d c, all between next d c, 3 ch sts, repeat *.

Forty-second row: * 1 s c, 1 ch st, over each ch st of previous row, making 5 s c, 3 ch sts, 2 d c, 2 ch sts, 2 d c, all over 2 ch sts of previous row, 3 t c, 3 ch sts, 1 t c, 2 ch sts, 1 t c, 3 ch sts, 3 t c, all over ch between t c of previous row, 2 d c, 2 ch sts, 2 d c, 3 ch sts, repeat *, for this row.

Forty-third row: * 1 s c, 1 ch st over each ch st, making 4 s c, 3 ch sts, 2 d c, 2 ch sts, 2 d c over 2 ch sts, 3 t c, 3 ch sts, 3 t c, over 3 ch sts, 2 ch sts, 3 t c over 2 ch sts, 2 ch sts, 3 t c, 3 ch sts, 3 t c over 3 ch sts, 2 d c, 2 ch sts, 2 d c, 3 ch sts, repeat *.

Forty-fourth row: * 1 s c, 1 ch st over each ch st, making 3 s c, 4 ch sts, 2 d c, 2 ch sts, 2 d c, 3 t c, 3 ch sts, 3 t c, over 3 ch sts, ** 3 ch sts, 3 t c, repeat **, 3 times, all over 3 ch sts, 2 d c, 2 ch sts, 2 d c, 4 ch sts, repeat *.

Forty-fifth row: * 1 s c 1 ch st, 1 s c, 4 ch sts, ** 1 s c, 3 ch sts, skip 2 sts, repeat **, around the scallop, 4 ch sts, repeat *.

Forty-sixth row: * 1 s c, 5 ch sts, ** 1 s c over ch of previous row, 4 ch sts, repeat **, for each ch, repeat *, completing the doily.

To make a set of these doilies, for the smaller size start the scallops after the 25th row.

For a larger doily repeat from 28th to 36th row, once or twice as desired, making a wider band of s c between the rows of open work.

If your thread is very fine increase the number of rows of s c, forming each solid band to make the size desired.

Why Grandfather had an easy time—

WHEN your Grandfather was a boy, it's likely that his folks bought a Charter Oak heater and range. And Grandfather, who was "Johnny" in those days, got the job of providing them with fuel.

BUT Grandfather didn't kick. If you ask him today, he'll tell you that the Charter Oaks were always easy to handle—kept the house warm and comfortable and did the cooking and baking with mighty little fuel, burned clean and left little ash.

CHARTER OAK

Stoves and Ranges have been doing that for 74 years—they are doing it today in hundreds of thousands of homes. And they will do it for you. See the nearest Charter Oak dealer, and learn how a Charter Oak will heat your home and cook your meals with less fuel, less labor, and less expense.

High Points in News of the Week

One of the important questions now before the officials of this country is whether or not the United States shall call an international conference to consider economic problems, especially the financial situation throughout the world. The proposal has both friends and foes. An interesting development in the program is a wide split between Senators Borah of Idaho and Johnson of California. The former is strong for the conference. The latter declares that it would mean the dumping into the lap of America of the financial woes of Europe.

David Lawrence, Washington correspondent on political subjects, last week declared that the policy of this country was not changing with reference to Europe, but that it was merely developing. He intimated that there was a broadening of the policy along lines that would permit this country to lend a hand in solving Europe's problems, but not permit America to get legally entangled. He declared that President Harding was opposed to the use of the words "isolated" and "aloof" in refering to America's position with reference to world problems. There are, however, those who would have this country join absolutely in the league of nations or any other international body designed to solve unitedly the world's problems. There are others who would take a halfway course. There are others who would keep America entirely "aloof" and "isolated" from all European affairs. The controversy is a gripping one.

* * *

The peace conference in Lausanne, Switzerland, where representatives of the leading European powers and Turkey are trying to solve the Near East problems is, at this writing, anything but successful. Turkey is standing firm for privileges and concessions that none of the allied nations are willing to grant. Freedom of the Dardanelles and the Bosphorus to the commerce and the peoples of all nations is a question involved. It is generally understood that Germany and Russia are standing back of Turkey in her demands. The peace conference adjourned from Saturday until Tuesday for the observation of Christmas.

* * *

The United States congress adjourned ate last week for a four-day recess for Christmas.

The most interesting development in congress during the last week was perhaps the attempt of a strong contingent of senators to delay action on the ship subsidy bill and take action on the rural credits legislation that is now being considered, a digest of which appeared in last week's issue of THE FARMER. An effort was made to secure enactment of the Norris bill creating a $100,000,000 corporation under government control for the regulation of buying and selling of staple commodities.

* * *

United States Senator Jones of Washington announced last week that he was going to propose an amendment to the Constitution providing that children born in this country of alien parents no longer automatically become citizens. It is said that the proposed amendment is intended primarily to meet the Japanese situation. Japanese children born in this country now are United States citizens, notwithstanding the fact that their parents can not become citizens.

* * *

The premiers of France, England, Belgium and Italy will meet in Paris January 2 to take up again the problem of German reparations. It is reported likely that they will ask the United States to take a hand in the matter. France is understood to be opposed to the United States being given power, charging that this country would be too lenient with Germany. France has gone on record that unless settlement is made before January 15 she will alone march into the Ruhr district and occupy it as a penalty for nonpayment of reparations by Germany.

* * *

The cost of living among wage earners' families in the United States on November 15, 1922, was 58.4 per cent higher than in July, 1914, according to the results of an investigation of conditions the country over, announced by the national industrial conference board.

There was an increase of 1.3 points, or 8-10 of 1 per cent, between October 15 and November 15, brought about by continued increases in food, clothing and coal prices and higher rents.

Between July, 1920, when the peak in the cost of living was reached, and November, 1922, the cost of living decreased 46.1 points, or 22.5 per cent, the report said.

* * *

The Ford Motor company has announced a plan to build a $6,000,000 plant near Detroit for the building and assembling of automobiles. The creation of employment for men is declared to be one of Mr. Ford's objects.

* * *

The American Federation of Labor declares that 150,000 railroad shopmen are still on a strike and that the strike is effective on all but 65,000 miles of the country's total railroad mileage of 260,000.

Freight Reductions

We are pleased to report that the transcontinental railroads, in order to meet water competition at the Pacific coast terminals, have declared a purpose to make sweeping freight rate reductions on many commodities shipped from the east and middle west to the Pacific coast and Rocky mountain territory. These rates, as explained by C. O. Bergan, traffic manager of the Spokane Merchants' association, "are voluntarily proposed by the carriers as the result of the decision of the interstate commerce commission of November 11. They mean material reductions to us, probably 25 per cent, and should mean material cuts in prices."

We are confident that our readers in territory west of the Cascade mountains will rejoice that these rate reductions are to benefit all the consumers and producers of the Pacific northwest—the farmers of the interior as well as the farmers on the west slope of the mountains.

The railroads had first proposed to make reductions only to the Pacific coast terminals and to leave the rate structure to the interior at the existing high and burdensome level. But a great organization, known as the Intermediate Rate association, extending from the Canadian line to the Mexican border and taking in all the territory east of the Cascade mountains, to the eastern slope of the Rocky mountains, went before the interstate commerce commission and protested against that regional injustice. We were glad to support that demand for fair dealing, insisting that the farmers and other consumers of the interior were just as much entitled to rate reductions as their friends and neighbors on the west slope of the mountains.

The interstate commerce commission sustained that just view of the case and told the railroads that if they wanted to meet water competition they must make the reductions apply to the interior as well as to the Coast terminals.

In this connection an important fact should be kept in mind—this decision and this victory were won under the Esch-Cummins railroad law. We agree that that measure is not perfect, because it was the work of man, and no work of man is perfect. But it did lay down certain rules of square dealing, as between the railroads and the people and the railroads and different communities, that should be preserved. This victory could not have been won under the old law—a fact made clear by the decision of the commission. If the Esch-Cummins law is to be reconstructed it should be amended with an intelligent understanding of these distinctions.

Wenatchee Apples

Only 58 Per Cent Crop Shipped

By E. H. M'PHERSON.

With the apple shipping season practically closed by the extreme cold weather, shippers and growers of the Wenatchee district are taking stock of the situation in order to ascertain how great their loss will be and how much they can save from the wreck.

About 25 Pacific Fruit Express cars daily have been loaded and shipped recently over the Union Pacific from Spokane. This constitutes the entire movement, except about a dozen cars on the average that go to Seattle for export shipment or to go into storage. The Great Northern has placed an embargo on all shipment over its line east of Spokane.

Total shipment of apples out of the district up to December 16 were about 7500 cars and there are 5750 cars still left. In other words, 58 per cent of the crop has been shipped, while last year at the same time 82 per cent of the crop had rolled up to the same date.

Of this 5750 cars about 2500 should be moved out before the middle of January in order to get into the market at a seasonable time. It is manifestly impossible to do this; in fact, from 1500 to 2000 of them will probably be lost through depreciation and decay.

An example of what railroad competition will accomplish is found in the case of Neppel and Wheeler, neighboring stations in the Moses lake section. The Northern Pacific passes through Neppel and the Milwaukee has a station at Wheeler. If one road does not furnish cars growers can haul their fruit by truck to the other station, only a few miles distant. As a result the last of the 210 cars grown in the near-by orchards was shipped on December 12. Other stations in the district still have over 40 per cent of their crop on hand, being compelled to depend upon one railroad without competition.

The Neppel case is being strongly worked up by advocates of the Wenatchee Southern railroad and will be used in the hearing before the interstate commerce commission held in Washington, D. C., January 10. The Great Northern has furnished many strong arguments in favor of granting a certificate to the Wenatchee Southern during the last season, but Neppel is the most striking one of all.

While the Great Northern has placed an embargo on apple shipment, the Milwaukee is sending regular fruit trains from Spokane to Minneapolis and Chicago, operated on a six-day schedule to the latter city. The two roads run through similar country and only a few miles away from each other.

It is now possible to make a fairly accurate estimate of the loss to the district through the car shortage. Fully 2500 cars of apples will never be shipped at all, and these are worth to the growers $2,000,000. In addition to this a loss, fully $1,000,000, has been sustained through deterioration in quality of apples shipped, but arriving in bad condition. It is safe to assume that another $1,000,000 will be added before the season is over on apples now on the way or in storage. Fears are expressed that the later varieties will suffer a further loss of $1,000,000 before they reach the market.

Farm Business and Markets Outlook

"Best for the West"

Just Folks

The Germans are not all brutes nor are Americans all angels. The Irish have their virtues and the English have their faults. The same line of thought applies to nations in general as well as to families in particular.

Perhaps the Rt. Rev. Herman Page, bishop of the Spokane diocese, announced a fundamental when he said that as long as babies are born there will be quarreling in the world.

Dreams of the millenium are not to be abandoned, but something is to be done right now and here in trying to quiet the quarrels among grown-up babies.

Bishop Page made a very practical suggestion when he added:

"But we can, in a measure, solve the problem by right living. It is the only solution. By right living I mean loving our fellows. Love means making concessions, doing the things we don't want to do in order to make some one else happy. We must train our children with that in view."

William Rhodin was in Portland the other day and told of his experience while a German prisoner during the war. In the Argonne he fell with a shell wound through his right leg and bad injuries to his back. First aid treatment was given him on the field but during the fortunes of the battle he was left wounded and almost dying. He was picked up by the German hospital service, taken to a hospital, his wounds dressed, but his leg was amputated, which he thinks might have been saved. He said he had about all of the company payroll on him, several thousand French francs, a lot of English money, almost $500 in United States money and a valuable gold watch. When he got out of the hospital all of this was returned to him. Reading of this I was tempted to think of these things.

Bickering, quarreling, backbiting and all that sort of thing comes pretty easy at times and there are times when it is downright hard work to avoid the temptation. Fighting with one's self is a real fight; is a full man's job and the sooner we are reconciled to it the better off we will be and the better off will our neighbors be. E. A. S.

Family Circle Girls

(Continued from page eleven.)

should have one day off every week if she desires it.

I like housework and would like to do it under right conditions, but I believe the time will come when it will be impossible to get domestic help if things don't change.

I think M. P. is right about the kissing question. Kissing is considered unsanitary, so isn't that reason enough for not allowing it? "DISCONTENTED."

Dear Mrs. Barland: I read "Billy's" letter in a recent number of THE FARMER and also M. P.'s. I never have written before, but I can't keep still any longer. I think Billy is just right. I would like to know her, as she is the kind of girl who can have a good time and still be a good girl.

I don't think M. P. ever went with a boy or she wouldn't talk the way she does. As for a girl not knowing when the right boy comes along if she kisses all the boys she goes out with, I think there is nothing to worry about, as I believe she will know the right one when he comes. If M. P. had ever kissed a boy she would know that a girl doesn't think she is in love with a boy just because she kisses him.

Like "Billy," I have kissed a good many boys and expect to kiss more and still expect to know the right one when he comes. M. P. says a boy is just playing with a girl's affections when he kisses her and will forget her for the next pretty girl that comes along. I wonder if a girl isn't the same way?

I think dancing is just great and I go to nearly every one in the country around here. Unlike some girls who never tell their mothers anything, I tell mine everything; we are regular "pals" and I haven't a secret from her.

I am 5 feet 2 inches tall and weigh 135 pounds. I have golden hair, which is bobbed, a fair complexion and no freckles. I have worn my dress short, but now that the style calls for longer ones I am making them longer. I think paint and powder are all right and I use both, but not to an extreme.

Don't think I can't do anything but paint and powder, for I do all the cooking and baking and all the house work at home because of my mother's ill health. I also play the piano and am teaching several pupils. I crochet, tat and do all of my plain sewing and I am only 18 years old.

We live on a large farm, but I have never milked or done outside work because my parents think a girl shouldn't do a man's work. "PEGGY."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3882. Lady's House Dress—Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 5 yards of 36-inch material. The width at the foot is about 2 yards. Price 10 cents.

4057. Girl's Dress—Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 4 yards of 32-inch material. Price 10 cents.

A Truly Wonderful Apple!

Just imagine an apple with the juicy tartness of the Jonathan, the meatiness of the old Winesap, the beauty of the Winter Banana, the deep gold color of the Grimes and the keeping qualities of the good old Ben Davis. **That's the Golden Winesap.**

The Golden Winesap (46)

True Delicious

It is a new apple, introduced only a few years ago, but has remarkable qualities. I prefer it to Delicious or Jonathan. It originated in Utah and should be hardy most anywhere. You will find this Golden Winesap in my catalog only, and prices are very reasonable.

The Old Reliable True Delicious

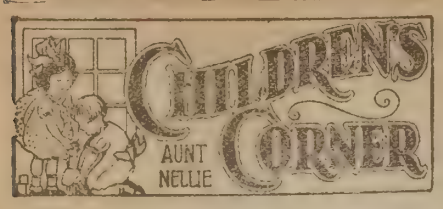
Almost everyone is familiar with the Delicious. Fruit is large, dark red, with a sweet flavor slightly touched with acid; fine grained, crisp, juicy. Comes out of storage in April in perfect condition. Very hardy. Our prices for trees are very low. Fully described in my Free Book. **My Book is Different—Send for a Free Copy.** It tells you the disadvantages as well as the good points of everything. It fully describes, with very low prices, a complete line of trees shrubs, seeds, etc. Send a Post Card for a free copy. CARL SONDEREGGER, *President*

SONDEREGGER NURSERIES AND SEED HOUSE, 75 Court Street, BEATRICE, NEBRASKA

The Dependable "Bean"

Always ready - always on the job—everywhere it's known as the Dependable Bean. This is especially true in the apple sections and where time-wasting troubles would have particularly serious results. Bean dependability is largely the result of the sturdy Bean Pump, with its porcelain-lined cylinders; absence of stuffing boxes; trouble-less ball valves; long-wearing eccentrics instead of cranks; and the reliable Bean pressure regulator. This year we've furnished more power and reduced the weight on a number of rigs by adding the Bean Engine. Also, we offer a new low-down construction, to avoid tearing off the fruit. Besides, the larger outfits have extra big wheels and wide tires so that they're easy to start and easy to haul. Send the coupon for new catalog which gives all the details.

The **Bean** *Spray Pump Co.*



221 W. Julian St.,

A nice letter comes to us from Leda Ruby Harrel, a cousin who is 10 years old. Leda lives in northern Washington. She is in the third grade at school.

Florence Boner is the only child in the Boner home near Snoqualmie falls, western Washington. Peanuts, a little dog, is a lively playmate and then Florence has a cat and three kittens to pet. She goes two and a half miles to school and has a fine teacher. She says she likes to go to school.

This is what we hear from Edna Johnson of Snohomish county, Washington. "We live on a 20-acre farm and we have six cows and two heifers. We had a very nice garden this year with many pumpkins in it for Halloween. We had so much fun Halloween. I have a pet cat and a little pig. I had three kittens, but two died." December 8 is Edna's birthday. She will be 10 years old then.

Kathryne Buckley's home is on a stock farm in northern Okanogan county (Wash.) near the Canadian line. She says she often goes with her father to look for cattle on the range and rides her own pony. Her pony's name is Shorty. Kathryne will be 10 years old February 17, 1923. The schoolhouse is only a quarter of a mile from Kathryne's home. She is in the fourth grade.

Verna Ferch writes to tell us about her new dolly who walks, talks and goes to sleep. Verna bought her with money she earned picking strawberries last summer. Dolly says "mamma" and sometimes she just says "ma." Verna would much rather have her dolly say "mamma," but brother thinks it is great fun when she doesn't, and when he gets a chance he makes her say "ma." Verna lives near the ocean in Grays Harbor county, Washington.

Birthday Greetings

THURSDAY, December 28—Opal Bridges, 9 years old; Bertha Osborn, 9; Zelma Vandecar, 11.

FRIDAY, December 29—Lola Adams, 10 years old; Aili Kynsie, 8; Leona Maurer, 10. Eunice James, 7.

SATURDAY, December 30—Lucille Jackson, 10 years old; Frieda Klippert, 10; Doris Munson, 9; Sigrun Agnes Runolfson, 10; Harriet E. Russell, 11.

SUNDAY, December 31—Evelyn Lorraine Cronawert, 10 years old; Anna Schrenk, 11; Nelle May Shephard, 8; Eula Turner, 11; Caroline Wesch, 8; Esther Williams, 11; Anna Bergh, 11.

MONDAY, January 1—Elsie Crabb, 11 years old; Muriel Daugherty, 7; James Miller, 8; Maude Warfield, 10; Ernest Verner Wicklund, 11.

TUESDAY, January 2—Matilda Anderson, 9 years old. Margaret Reid, 9.

WEDNESDAY, January 3—Mildred Sherrod, 11 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Johnnie Haveland, Senvi Naranen, Audrey Weeks, Lester Glover, Thelma Lucile Nelson, Matt Naranen, Marie Clark, Rosa Schlien, Georgia Ellen Penney, Emma Jones, Elsie Stark, Esther Thiemenz, Ellen Peterson, Helen Ulrich, Bessie Smathry, Clara Bernice Smith, Martha Moorehouse, Lempi Lakko, Lester Haveland.

BEDTIME STORIES

By THORNTON W. BURGESS.

DANNY MEADOW MOUSE WORRIES.

Danny Meadow Mouse sat on his doorstep with his chin in his hands, and it was very plain to see that Danny had something on his mind. He had only a nod for Jimmy Skunk, and even Peter Rabbit could get no more than a grumpy "Good morning." It wasn't that he had been caught napping the day before by Reddy Fox and nearly made an end of. No, it wasn't that. Danny had learned his lesson and Reddy would never catch him again. It wasn't that he was all alone with no one to play with. Danny was rather glad that he was alone. The fact is, Danny Meadow Mouse was worried.

Now, worry is one of the worst things in the world, and it didn't seem as if there was anything that Danny Meadow Mouse need worry about. But you know it is is all that ailed Danny Meadow Mouse that the easiest thing in the world to find something to worry over and make yourself uncomfortable about. And when you make yourself uncomfortable you are almost sure to make every one around you equally uncomfortable. It was so with Danny Meadow Mouse. Striped Chipmunk had twice called him "Cross Patch" that morning, and Johnny Chuck, who had fought Reddy Fox for him the day before, had called him "Grumpy." And what do you think was the matter with Danny Meadow Mouse? Why, he was worrying because his tail was short. Yes, sir, that bright morning.

You know some people let their looks make them miserable. They worry because they are homely or freckled, or short or tall, or thin or stout, all of which is very foolish. And Danny Meadow

Danny at once became conscious of his own stubby tail.

Mouse was just foolish in worrying because his tail was short.

It was short! It certainly was all of that! Danny had never realized how short until he chanced to meet his cousin, Whitefoot, who lives in the green forest. He was very elegantly dressed, but the most imposing thing about him was his long, slim, beautiful tail. Danny had at once become conscious of his own stubby little tail, and he had hardly had pride enough to hold his head up, as became an honest meadow mouse. And ever since he had been thinking and thinking and wondering how his family came to have such short tails. Then he grew envious and began to wish and wish that he could have a long tail like his cousin, Whitefoot. He was so busy wishing that he had a long tail that he quite forgot to take care of the tail he did have, and he pretty nearly lost it and his life with it. Old Whitetail the marsh hawk had spied Danny sitting there moping on his doorstep, and had come sailing over the tops of the meadow grasses so softly that he had all but caught Danny. If it hadn't been for one of the merry little breezes, Danny would have been caught. And all because he was envious. It's a bad, bad habit, and Danny Meadow Mouse has learned better now.

Pike's Peak or Bust

(Continued from page ten.)

to know for certain which way he's heading."

"How'd we better go about that, Mr. Cooper?" Orlando wanted to know.

"I'm of the opinion we ought to do as a good trailing hound does when he loses the scent. We can circle."

"Circle! How circle?" Esau inquired.

"Why, we'd better go out two or three hundred yards from camp and make a complete circle, or circuit, with our camp for a center. If we look close enough we're likely to find some place where he's passed. When we once get his course we can soon decide on our next step."

"But we've all been passin' in and out. I don't see how we can discover a lone man's trail," objected Esau.

"Neither do I," Holloway said.

"I know it won't be easy. But I'd like to give the matter a fair trial," continued Cooper. I've heard that every criminal leaves some trace that can be discovered if a determined effort is made to discover it. It's a part of that eternal law, 'Be sure your sin will find you out.' Let's try, anyhow."

"I'm willing. And let's be quick about it. Night will soon be on us," answered Holloway, promptly.

The others agreed. Now the five men went about 300 yards from the camp, then spread out and began to move slowly around. And as they moved their eyes searched the ground.

In most places there was a deep litter of pine needles. That would make trailing very difficult, at least for people unaccustomed to trailing. But here and there were bare spots, and it was in some of those that the party hoped to learn something.

Slowly, carefully, the five men moved, but without discovering anything till they has passed almost wholly around the camp. Then, in a little patch of sand washed down by rainwater Orlando made a discovery that brought him to a sudden halt.

What he saw was the marks made by two bootheels, where they had slid through the sand.

"Now how came anybody to make those?" he asked himself, though the words were spoken aloud.

"Found somethin' there, Lando?" called out Esau.

"B'lieve I have. Step over here a minute and see what you make of this."

Esau was soon standing with his hands on his knees, gazing down at the marks. "Even if some of us passed along here I cain't recollect anything that caused us to slide our heels like that," he said.

But now Jess Holloway, who had come up behind the two already there, made another discovery.

"What's this here by the side of the heel marks? Yes, and on the other side, too?"

The other men looked. Then all raised their eyes and stared at one another.

"Moccasin tracks!" gasped Orlando.

"Right you are! Moccasin tracks and nothing else," Jess answered. Then he called to Cooper and Givens: "Come over here, you two! We'll show you something!"

"Now what does this mean?" demanded Orlando, as he began to study the tracks again.

"It means—it must mean that we've had visitors," replied Esau.

"Yes, and visitors that wore moccasins—redskins!" said Jess.

Presently the whole party of five were gathered around that little patch of sand, studying its suspicious signs. But all were careful not to step on the sand themselves.

Now Cooper spoke: "Men, to me these signs seem to tell a new story. And it's a story I'm glad to read for some reasons, and sorry to read for others. Instead of being a scoundrel, as we supposed, our missing partner seems to be a prisoner. He's been captured by the Indians. These tracks can only mean that an Indian had 'im by each arm, and they were marching 'im away through the woods. Here's for some reason, he held back, and his captors forced 'im along."

"My guess is that he r'ared back a-purpose in this sandy place, so's to make a plain trail," Esau suggested. "Abe's a purty knowin' feller."

"He is," Cooper agreed. "And he might have done—yes, ten chances to one he did do that very thing."

"I'm wondering how the Utes captured him," Orlando was speaking. "Wasn't any sign of a struggle in camp that I could see."

"Maybe they threatened to shoot 'im, and he didn't dare struggle," was Holloway's surmise.

"With the information we've picked up here, let's hurry back to camp and see what can be discovvered there," proposed Cooper. "If redskins have visited us they must have left us a fe wsigns somewheres."

CHAPTER TWENTY-NINE.

Sanders Rescued From His Captors.

The whole party were soon in camp, looking over every foot of ground. There had been much tramping here; but, in some dead ashes, where nobody commonly walked, they discovered one very dis-

The thongs binding the captive were quickly slashed.

tinct moccasin track, wth parts of two or three similar tracks close by.

"No doubt about it now. Some of those redskins that trailed us have been here," Cooper told his companions, after examining the footprints. "And that means that our vanished partner is both an honest man and a captive."

"First part of that's bully good news," declared Esau.

"The best news we could have received," said Cooper. "Why, do you know, it actually hurt my feelings to think I'd been working and eating and sleeping with a thief? Now—now I know better."

"But Abe Sanders is undoubtedly a captive in the hands of the Utes. Not much good news in that," Holloway reminded them.

Cooper answered: "No, that's bad news—terrible news. But—but it's better than the other. Better that what we believed at first. I'd rather be a captive any day in the year than a thief—a scoundrel that would rob his own partners. But I'm

(Continued on page sixteen.)

Learn by Doing

Each of the 17 members of the Pierce county bee clubs started out last spring with a new hive of bees purchased with their own money, bought the needed equipment, and carried the work through the summer, making a total net profit of $497. This, of course, included only the honey and increase of the original swarm. One club was at Alder and the other at Edgewood.

When the club members first began their work there were few that knew anything about taking care of bees, but trusted that part to their club leader, J. W. Peterson. As the season progressed the boys met at the homes of different members where they were shown some of the seasonal problems of beekeeping. Each meeting was at a different home and since there was a meeting every week, it was not long until every member's bees had been gone over by the leader and the boys as well.

By the time the honey flow was over each member was well versed in the subject of honey production and one boy gave a bee demonstration at the Western Washington fair at Puyallup. The entire club gathered some of their best products and made up an exhibit which compared favorably with those arranged by the experienced beekeepers of the county. After the display had been taken home there came a request that it be sent to the Land Products show at Portland.

Two Breeds

o Improve Quality of the Milk

"I have no intentions of mixing the two reeds of cattle, but I plan on keeping bout 20 good Holsteins and the same umber of Guernseys in order to produce good quality of milk for retail trade," id Fred Nelson of Renton Junction, King unty, when asked by a representative of HE FARMER why he kept the two reeds. "I have found that the customers ke milk that is well colored and it is sy to produce this with a few Guernseys the herd. The Holsteins, however, are e best breed for producing the quantity f milk and I believe in keeping all of y best milkers in order to keep up the pply."

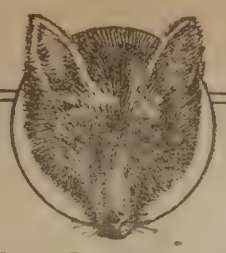
At present the Nelson herd is made up rgely of Holsteins, but Mr. Nelson exressed himself as being anxious to inease the number of Guernseys as soon s possible. The herd bull is a junior -year-old animal from the Milky Way rm at Sumas. He shows a splendid conrmation and is a good typed animal. Mr. elson has raised 21 heifer calves sired y this bull since bringing him to the rm. The young heifers are taken from e herd as soon as they are old enough to asture and kept at Mr. Nelson's 320-acre rm near Roy, Pierce county. This place part pasture and part meadow, and a an is employed to look after the stock nd feed them through the winter. As any as 60 head have been kept at this lace, part of which were taken to the elson herd as they were about to freshen. Ir. Nelson plans on securing at least 10 ew cows from this place every year.

"We usually raise our own hay here on he home place," said Mr. Nelson, "and e very seldom have to buy more than a arload of alfalfa in early spring. This ear, however, we did not put up as much ay and will have to buy more. We have 5 acres of land for both hay and pasture. ight acres of this is used for growing orn for the silo. It grows well on this ottom land, and we plan on feeding ilage from November until May every ear.

"Before we had a silo we used to feed angels exclusively and the cows did well n them, but we like the silage much betr and feel that it does not take as much me as the growing and harvesting of the ame acreage of mangels. As a general ule our corn grows from 20 to 22 tons f silage to the acre, but one year we had n exceptional crop which produced 35 ons. It was a white Dent corn and we ept some of it for seed, but we lost it ne year from a bad frost and never have een able to get the same kind since."

Mr. Nelson told how he kept his pasture n the best shape by plowing it up occaionally and reseeding for a hay crop. He entioned Italian rye grass as a very good ddition to any hay or pasture crop. It omes up early and produces a luxuriant rowth and is well liked by the animals.

A WINNER OF JERSEY MEDALS.



The Jersey cow, Double St. Mawes, wned by David McLeod, Bellinghom, Vash., has taken her place among the great cows of the breed. Double St. Mawes was senior and grand champion at he Whatcom county fair, at Lynden, last all, where she gained the admiration of ll who saw her. She won two silver medls and one gold medal before she was ive years old. Her first official test was s a senior yearling, her fat production hat lactation being 515.58 pounds, with n average test of 6.3 per cent. She carried her calf 216 days. Her second test vas for 305 days, and she carried a calf 30 days of the time. The medal requirement is 155 days. Her average test was .43, and her fat production 683.53, which vas the world record for age and also for ll ages in the 305-day division of the A. J. C. C. Register of Merit of work. During her test Double St. Mawes ran most of the time on pasture. She was milked three times a day four months and he balance of the time only twice a day. Her record was completed early last summer. Within the last few weeks an Oregon cow, Lulu Flossie of Ashburn 2d, owned by J. M. Dickson & Son, has displaced her for both records, with 698.32 pounds of fat, but it does not alter the fact that Double St. Mawes is one of the great cows of the Jersey breed in the northwest. She has a place in the Jersey "hall of fame," as an ex-world record cow. Her sire, St. Mawes of Edendade, has a double infusion of the blood of the two great gold medal bulls, St. Mawes and Rosaire's Olga Lad.

A GREAT DUROC JERSEY.

In a recent issue of THE FARMER there appeared a picture of Great I Am 1st and an item of comment on his qualities. The writer failed to note, however, that this boar was a Duroc Jersey. George O. Swales of Johnson, Whitman county, who owns him, considers him the best herd sire he has eer used. He is an animal of outstanding qualities and great vigor, both of which he stamps on his litters.

Pike's Peak or Bust

(Continued from page fourteen.)

afraid—very much afraid poor Abe has allowed himself to get into a bad scrape."

"Yes, a dreadful scrape," declared Jess. "If the two Utes have kept 'im on the jump, as they're likely to do, they must be well up toward the snow line with 'im by this time."

"And they'll have 'im on yon side of the snow cap before we can overhaul 'em," commented Esau.

"Not much doubt of that," admitted Cooper.

Now all the five gathered themselves in a group, in order to agree upon some plan of action.

"What puzzles me is how the Utes happened to do so little damage in our camp," Orlando presently remarked. "From what I've heard and read of Indians, I would have expected them to destroy everything they couldn't carry off."

"Is something a little strange about the way they left things alone," Givens answered. "They not only left most of our camp plunder untouched, but they didn't even disturb old Brindle. Left her grazing right where she was when you started out this morning, didn't they, Lando?"

"Not at the same place. But Sanders had probably moved her to fresh grass before the Utes came."

"That is a little puzzling," Cooper confessed. "But no use trying to figure that out now. More important matters to attend to, and that the first minute possible. Main question at present is: What can we do first to rescue poor Abe Sanders?"

"Only one thing we can do, seems to me like," Esau was speaking. "And that is to set out forthwith and try to come up with the red savages before they can drag their prisoner acrosst the snow cap. Wasn't many of 'em, jedgin' from their tracks."

"May have been others farther away, that didn't make any tracks," Orlando suggested. "That was only a little patch of sand, you recollect."

It was Cooper that answered: "Yes. We can't make out from those signs just how many Utes were in the band that captured Abe. But we'll hope there are not many. Only thing I see to do is to get on their trail as soon as ever we can. Now bobs up another question: How many of us had better go and how many stay to guard the camp?"

"Won't do to leave jest one man here," was Esau's opinion. "We've tried that, and it didn't pan out—not worth a cent."

"But if two stay here, that leaves only three men to follow the redskins' trail," Holloway reminded them.

"Well," said Cooper, thoughtfully, "we've lost our most valuable possession already—our treasure pot. So my opinion is that we'll have to leave the camp to take care of itself for a while. I know that's not a wise thing to do, out here in this wilderness. But it's the only way we can hope to rescue our captive partner."

"Not a doubt of that," said Holloway. "And the sooner we strike their trail the better. Night's not far off."

All agreed to that plan. After a hasty meal, of whatever they could cook in a few minutes, they provided themselves with plenty of ammunition, examined their weapons, and were off to the rescue.

First they hurried to where they had discovered those tracks in the sand. There they took up the trail and tried to follow it.

And they found that they could follow it. Far faster, too, than they had even dreamed of doing. It was fortunate that they had tried to trail Sanders and his captors. For the trail did not lead toward the mountains, as they had fully expected, it turned south. They followed it as fast as possible.

Now it was plain that Sanders, every time he came to loose soil, had held back or done something to make a more distinct trail.

"Abe's got his wits about 'im, and he's doing his level best to make his trail so plain we can't miss it," Cooper said. "And we must—we must do our level best for him."

"That we must!" declared Esau.

And Givens said: "Yes, we must certainly do our utmost to rescue the poor fellow. But if the Utes ever get 'im across the snowy range and into that big town of theirs, it will be out of the question for us to do anything for 'im."

"There you've said it," Esau agreed. "If they don't put 'im to death after they get 'im over there, it would take the whole United States army to skeer 'em into turnin' 'im loose. Our little bunch couldn't make a start at it. We'd only git our scalps lifted for tryin'."

"And even if a whole army went after 'im, they'd be pretty sure to find the poor fellow dead and scalped," Cooper said.

All this time the pursuers had been hurrying on, following the trail as fast as they could pick it up. At length, on coming to a place where there was much loose sand, the trailers gained some information that gave them great relief. And that was that there were only three in the party dragging off Sanders; the two who had him by the arms and one other. In the way two pairs of moccasin tracks kept on each side of the boot tracks, it seemed plain that two of the captors were still forcing their captive along between them. The third man, it was soon learned, was carrying that pot of gold. At one place the pursuers could make out the plain print of the pot's bottom in the loose soil. And it was close by two moccasin tracks.

"Don't you see what was the matter?" said Cooper. "The pot's wire bail was cutting the redskin's hand; and here he set it down to rest his hand."

"Or maybe that 30 pounds made his arm tired, and he set it down so as to change hands," surmised Orlando. "I can see the red rogue setting it down, and then glancing back to learn if anybody was trailing him. Wonder how long it has been since they passed here."

"Ever so much longer than I wish it had been," was Cooper's reply. "We've got to hustle, boys! Yes, we've got to move fast, or it will be everlastingly too late."

On the party hurried, increasing their speed as much as they dared, to keep from losing the trail. All the time they were expecting the trail to turn west, toward the great mountain range. But it was still leading southward.

Not till the sun had disappeared behind the mountain did the pursuing party make their most surprising discovery.

While the five men were searching for that elusive trail in a very difficult place, they heard a peculiar noise. It was somewhere in the woods ahead, and sounded much like a frog's croaking. However, they could tell that it was not a frog. Suspicious of those strange sounds, the whole party stood staring ahead and listening.

After the noises had been repeated several times, the five men whispered together for a minute or two, then started forward to investigate. Instead of following the trail, they moved round and approached the suspicious spot from one side. And they approached cautiously, every man with a thumb on the hammer of his gun and a finger on the trigger.

The noises, which were still being made, were coming from among a rather large thicket of pine bushes. Not till the men were actually among the bushes could they make out from what particular spot the noises came. And what they saw amazed them exceedingly.

There, tied fast to the trunk of a pine tree, they saw—their missing partner!

For a few moments all stood staring at him. Then, of one accord, they rushed upon him.

Sanders was fastened with his back to the big, rough tree trunk. In addition to the buckskin strings holding his hands and feet, another string, tied tightly in his mouth, kept in some grass that his mouth had been stuffed with. Hence the only sounds he could utter were harsh, croaking, inarticulate noises.

Out came several knives, hunting knives and pocketknives, and the thongs binding the captive were quickly slashed. The moment the buckskin had been taken from his mouth, Sanders spit out his gag of grass with much disgust.

"How long have you been trussed up here like this, Abe?" asked Cooper.

The released captive spit out some more leaves and grass, examined the cord marks on his wrists, and then said: "About—about two hours, I'd guess. Though it seemed more like two weeks. Worst scrape I ever blundered into!"

"How did the redskins come to tie you up here, instead of taking you on to their town?" Orlando wanted to know. "That's what we all decided they'd do with you—drag you on."

"Redskins! I haven't seen any redskins!"

"You haven't! Then who—who in the world captured you?"

"Why, white men, of course. That is, they're white on the outside, but black as a crow inside. They're a set of black-hearted scoundrels—blacklegs—that's what they are! Of course, though, I knew that before."

"But they wore moccasins, all three of them," said Jess.

"To be sure. But that only proves that they'd tramped these mountains till they'd worn their boots out. Then it was either make moccasins or go barefooted. They spoke of robbing me of my boots. For some reason they didn't though."

"Well now, that explains something," Cooper said. "We found moccasin tracks in camp; and we couldn't understand why the supposed Indians had left things in such good shape. One would naturally expect a bunch of redskins to destroy all that they couldn't carry off."

"No telling what those three rogues would have done after they got the drop on me and made me a prisoner. That is, if nothing had happened. They began to go through our things, but after the first peep into that pot of gold, they were so delighted and excited that they didn't seem to care much about anything else."

"You've no idy who the scoundrels are, or how they came to be out here, have you, Abe?" asked Cooper.

"No idee who they are? Of course I have—a very distinct idee. Fact is, I know 'em too well."

"Know 'em too well! Who—who are they?" demanded Givens.

"Why, it's that tough Jeeters gang, of course."

Same fellows that murdered Mason and robbed 'im!" Orlando almost gasped.

Cooper drew a long breath, mostly of relief. "Well now, this simplifies matters for us, boys," he said. "With Abe in the hands of redskins and being dragged away across the snow cap, things looked wellnight hopeless to me. For the life of me, I couldn't think of any way to rescue 'im. We didn't —I don't believe one of us thought about our gold then. But with our stolen partner free and that pot of dust somewhat in the vicinity, I feel more hopeful—ten times more hopeful."

"So do I—so do I," declared Holloway. "And we're bound—yes, we're just naturally bound to get that dust away from that bunch of cutthroats!"

"But how? How'll we go about it, Jess?" demanded Givens.

"Yes, that's—that's what I'd like to know," said Esau.

"That's what we've got to find out," Cooper was speaking. "But—but we're going to hunt those high-handed, red-handed rogues down! And when we find 'em—when we once run onto 'em——"

"When we once run onto 'em, right there we leave 'em! declared Givens.

"But that will take time," Cooper reminded them. "First thing for us is to get back to camp. There we can talk things over and lay our plans."

Night was coming down when the six men found themselves at the foot of their big rock again. There they soon had a great camp fire burning. While others were cooking supper, Orlando went and milked Brindle. Then he watered her at the spring, and moved her to fresh grass. Not till the whole party were eating supper around the fire did they begin to discuss the best means of recovering their lost treasure pot.

(To be continued.)

THE KITCHEN AND THE BARN.

Is the equipment in the kitchen as modern and serviceable as that in the barn?
